ABSTRACT

The long and many times experimental trial will be necessary in order to guarantee the product property stably and reliably. As for the stable operation and reliable one the more times and choices will be proceeded according to the product property regarding the essential new composition, then not missing the long life and good performance negligently in maker sample room and ensure that all the parts are to be more qualified than the last one for the sake of transforming them to customer side with more security & reliable one. Therefore, don't stop to provide innovation product with the easy operation to proceed normally and refuse its advancement feature because the smart product is entering our real world definitely and absolutely. Only if we continue to work the advancement science & technology the sophisticated product and following effectiveness may be birthed and advocated gradually and eventually. As a scientist he must proceed his searching to push new measures for the sake of updating the traditional theory & experiment largely. A paper might conclude in the entire big mind and subsidiary diversities to exhibit his performance in front of public readers that contains many sophisticated features and achievements during his a certain time's innovation research. At the same time, the robot etc innovation machine can help us to process many things from workshop, public occasion to medical & even family, so that the as many as them need us to make continuously to help doing some key aspect like work as welding integrated-circuit chip, movement with materials & doing cuisine and housework even flatter with older man. Therefore, the more robots made by factory are to afford the inestimable perspective for

serving human being comfortably. We should constantly provide the substance & logical chip to make for the sake of producing humanoid-robot specially and continually to realize the modernization and commercialization in near future. Some materials are to affect the product longevity and property so that more searching about it will be necessary through scientists and engineers who burden heavy responsibility for the sake of enhancing its performance and longevity besides its high-quality with low making cost.

Keywords: Progressing & emerging high-technique product & GDP systems, by sustainability, an innovated searching

1. Introduction

The potential talents need to be emphasized and trained a periodical education experience so as to raise the competition capacity each other that will take up the usefulness methods to be birthed constantly. The collaborative combination and cooperative spirit will be advocated by us so as to make an innovative item like software program making capacity besides hardware searching and exploration. From the composition to the performance the series experimental with a series of processing stages like combining compositions, processing, evaluating, processing again, evaluating longevity & making product and brain judgement like modeling erection with principle formula will indicate that first one factor to determine the predicting performance result and longevity. So we should investigate broadly and clarify the key points and then start our theoretical modeling exhibition with the help of experimental proof that may bring out many chances for us to process continually.

Meantime, the investment behavior may be proceed by the similar method with experiment and judgment capacity. The first experiment will be done several thousand stocks in exchange center use portfolio combining strategic plan and then after some time the evaluating its earning will be expressed, and the goodness with AI investment machine and mathematical deduction modeling to analyse the price changes even vibration. Thereby, the financial innovation will make us to be a rich-man that contributes to the tertiary industry enhancement eventually and ultimately. Hence, the reformation idea will occupy the first and important factor for us to master its behavior and judgement like financial one that may bring us more beneficial capital than ever because of the quantization investment and evaluating stock price within 5 thousand stocks. Thereby, the stocks evaluating system will be more prevalent and urgent for our constitution investment behavior. There are so many tips to tell us following the main capital to win the game that is like a fairy tale story under the help of AI (artificial intelligence) machine.

At the same time, the nation's industry advancement will influence our life level like 16° electric consumption per people per day in China 2025. the more energy electric generator has to be increased gradually year by year so as to raise our GDP value eventually besides giving us more comfortable even convenience above 10 times to catch up the USA developed level. Let us do best endeavour to raise our mission for improving GDP value under cooperation and collaboration spiritual courage within R &D dept(research &development department) and laboratory scope that is to become our diligent destination as to so many scientist and scholars. The better way to be successful is still made by ourselves in different occupations that may create huge power to push the high-technique forwards sustainably whilst the achievement can be published in a journal with fluently English narration once we had any spiritual inspirations. [1~20]

2. Discussions

The long and many times experimental trial will be necessary in order to guarantee the product property stably and reliably. As for the stable operation and reliable one the more times and choices will be proceeded according to the product property regarding the essential new composition, then not missing the long life and good performance negligently in maker sample room and ensure that all the parts are to be more qualified than the last one for the sake of transforming them to customer side with more security &reliable one. Therefore, don't stop to provide innovation product with the easy operation to proceed normally and refuse its advancement feature because the smart product is entering our real world definitely and absolutely. Only if we continue to work the advancement science &technology the sophisticated product and following effectiveness may be birthed and advocated gradually and eventually. As a scientist he must proceed his searching to push new measures for the sake of updating the traditional theory &experiment largely. A paper might conclude in the entire big mind and subsidiary diversities to exhibit his performance in front of public readers that contains many sophisticated features and achievements during his a certain time's innovation research. [21~25]

2.1 Industrial enterprises above designated size y-y in the first half of 2026

The Industrial enterprises above designated size y-y in the first half of 2026 status might show 6.1%~7% by Hebei~Shandong province correspondingly according to the Figure 1 to provide the Shandong one higher value.

Figure 1 Industrial enterprises above designated size y-y in the first half of 2026 status. [1]

Furthermore, the Industrial enterprises above designated size y-y in the first half of 2026 status might show 4.9%~5.9% by Shan'xi~Fujian province correspondingly according to the Figure 2 to provide the Fujian one higher value.

Figure 2 Industrial enterprises above designated size y-y in the first half of 2026 status I. [1]

2.2 H1 2026 China top ten provinces GDP status

The H1 2026 China top ten provinces GDP y-y nominal value would show 2.7~7.2 trillion yuan by Anhui~Guangdong province correspondingly in Figure 3 to indicate the Guangdong one competed the highest developed pace. In contrast, the Jiangsu, Shandong & Zhejiang ones finished 7, 5.3 & 4.8 trillion yuan developed pace there.

Figure 3 H1 2026 China op ten provinces GDP status. [2]

At the end, the H1 2026 China top ten provinces GDP y-y value would show 6.4%~5.2% by Anhui~Guangdong province correspondingly in Figure 4 to indicate the Zhejiang one competed the highest developed pace with 5.7%. In contrast, the Shandong, Shanghai & Anhui ones finished 6.2%, 6.3% & 6.4% developed pace respectively.

Figure 4 H1 2026 China op ten provinces GDP y-y value status. [2]

2.3 Subjects for International Journal of Engineering & Science

The International Journal of Engineering & Science (The IJES) is a high-quality open access peer reviewed research journal. The IJES provides a platform for the researchers, academicians, professional, practitioners and students to impart and share knowledge in the form of high quality empirical and theoretical research papers, case studies, literature reviews and book reviews. The IJES welcomes and acknowledges the high quality theoretical and empirical original research papers,

case studies, review papers, literature reviews, book reviews, conceptual framework, analytical and simulation models, technical notes from researchers, academicians, professional, practitioners and students from all over the world. The publication charges are 2200 INR. The journal publishes in an online version. The IJES publishes research papers in the field of: Science and Engineering: All kinds of Science and Engineering, Technology and In Education, Environmental Studies, Climate Change, Agricultural, Rural Development, Urban Studies etc. Social science and Humanities: Social Science and Humanities, Sociology, Social Welfare, Anthropology, Religious Studies, Visual Arts, Political, Cultural Aspects of Development, Tourism Management, Public Administration, Psychology, Philosophy, Political Science, History, Education, Women Studies and so on. Business and Economics: Business and Marketing, Economics, Financial Development, Accounting, Banking, Management, Human Resources etc. [3] Therefore, we delight to invite your submission to our journal for the sake of commonly beneficial, and we are to publicate your cherish one after passing peer reviews quickly and cheaply.

3. Conclusions

As to developing the nations and regions GDP(gross domestic product) the all of the three industries need to be promoted specially in the secondary & tertiary ones because the scale launches and production-lines are to be produced continually inside factories which may create to decline all of the cost per one. Therein the orders from market and customers would increase the whole order quantity in light of raising market requirement that forms the huge impact to traditional old kinetic energy. So the more automatically producing products may be produced that needs to be consumed within relatively short time, and the need to be used by all of us for the sake of consuming the recent products rapidly. As we knew the modern product and equipment has its more functional demand with regards to time progressing, and there would be more urgently useful and enjoyable aspect to influence our expenditure through expending more money to those high-functional emerging one as the medical technique improves sustainably. If we are diseased the advance medicine technique will be investigated through medical MRI(magnetic resonance imaging) and CT(computerized tomography) etc. device to test and later the doctor makes decision of disease for adopting suitable medical technology to treat the patient according to the test result. So that the healthy status must be checked periodically if there might be unfitting situation, and the predictable exercise and investing capital to a defining matter that will save much money before the truely disease come. We also need to pay more attention to the climate changes and producing public sanitation that may cause the lots of human being to meet the accidental matter like high-temperature resulting disaster with forest fire and rush rain which may impair the earth environmental abnormality at all. All of those would affect

our live health & condition so the more intelligently strategic planning and action is to proposed to form predictable method in advance for us to adopt corresponding governmental policy to advocate all of us specially experts proceeding subsequent tactics to study and predict accident problem to happen in future. With regards to emerging artificial intelligence robot appearance, there would be more and more occupations might substitute traditional human worker, the more competitive situation will be created. Therefore the making and maintaining advance one like humanoid robots would be proceeded by our engineer & technique worker, so our human being would learn and develop more complicated subjects like interdisciplinary ones with erecting possibility plan from now on. It is to be studied further that the possibility between human being and the robot who will be learning the availability project in actuality world outside the virtual one.

Article Publication Details

This article is published in the [International Journal of Multidisciplinary Research and Bulletin](#), ISSN 3108-1428 (Online). In Volume 5 Issue 4 (July – Aug) 2026

The journal is published and managed by [IRPG](#).
