ABSTRACT

The vehicle industry will stay an important occupation in the secondary industry that occupies more GDP (gross domestic product) allocation recently with promoting its electric vehicle into our deep level and helping us with its functional AI chip to one. Therefore, the new innovative reformation may be demanded by the modern society requiring amount and quality & functions like security chip for the sake of avoiding the crash accident as soon as possible even zero accident. We should arrange more departments in university and R & D Dept in maker so as to enhance its low-cost and multi-functions device for that secure problem and price declination. On the other side, the more diversity requirement from end-customer who may ride the auto in a busy route may be demanded ultimately. Therefore, the more researcher and study staffs can be recruited and adopted for them to continually clarify and classify those complicated technology into simpler ones in order to produce more smart product and equipment for our user. We could transform the key joints into the actual sample and even launch one later from university and institutes that our maker creates new one from childish stage to mature one step by step. Not only educating our new engineer and scientists but also recruiting mature experts from out-resource makers and even colleges. So that the latent and technology might create a new good-circulation contributed to the maker making level & quality eventually and ultimately. We should develop not only engineers in maker internally but also cultivate the basic experiment and non-derivative one as well for progressing our making speed and amount with low-cost and high-level & high-efficiency contributed to the more satisfaction from basic demands too in the ultimate view. We should maintain the continual innovation products for avoiding knock-out at all and transforming series derivative products to occupy the instructive market level and capacity. Thereby, the basic besides applied one will be proceeded

simultaneously due to experiencing the double-times effort from basis to advance course definitely for owning leadership relation in product making aspect. In short, the auto business as a significant influence might wield its serious role in enhancing GDP value and all kinds of auto series with autonomous driving function for ensuring the drivers and accompanies life and declining damage at all. At the end, the scientist must go on his research constantly not giving up and publish related papers with high-quality in high-impact journal for lasting his research in defined fields after estimating theoretic & experimental course with fully innovative method and calculation modeling capacity sustainably.

Keywords: China auto exportation nations value analysis, estimation, by sustainability, an innovated searching.

1. Introduction

The high-technique skill will wield its forwards economic boosting ability with regards to enhancing the secondary industrial amount and quality for the sake of making new-quality-production on behalf of tip deepening fields sustainably and continually. Those fields need our scientists and engineers mutually to complete with cooperative and collaborative spiritual coordination that will be better ways for us to proceed besides that there would be some capacities may independently complete some tip one for a certain definition that arouse some innovation ideas and breakthrough performance as well. After they published the related papers in higher magazines such as SCI(science cited index) that may call us to consider which degree that paper attains with various cutting-edge-field like physics & chemistry, medical & chemistry, medical & physics etc. many subjects and departments that may found interdisciplinary subjects based on the detail research themes. As we often saw the famous papers and authors publish their achievement one and two in CNS for our readers to see and simulate that definitely instructs innovation methods with different subjects and interdisciplinary one. Also the mathematical field new finding and proving course with completely erected formula to gain the anticipating result, so that the corresponding awards & money were granted by the society & association. Due to their huge contribution to the modern society development the as much as those prize needs to be erected and gives them the corresponding stimulus for the sake of encouraging those big awarding dollars that sequentially searching has to be continued process urgently.

On the other side, the high-technique skill and experience must be transformed into the mature product and equipment through our efforts with maker R & D dept(research & development department) as for definitely high-tech key parameters like temperature & time through a certain compositions and procedures by them. The innovation company will emerge in factories communities with advantageous policy to get more economic supplier from government sides how a one makes those tip products in light of the market demands in advance to ensure that the grasping more orders

within recent years and future ones. At the last, the trade transaction may play an important role in making new energy vehicles in China defined the following aspects. The dynamic-chargeable-battery, electric controlling, security driving-subsidary software with Beidou location &electrical motor designing are included that the entire vehicle test needs to satisfy the corresponding standard by the technological departments. Moreover, those security equipment must be set up in vehicle with four scales grades updated urgently for sake of improving the autonomous driving experience and making sure its strength securely for everyone to drive with non-accident ultimately. That might become the priority turning for us continuously dealing to make sure its function stabilization more and more &day and day.

Therefore, those vehicles may transit into the other territories and nations due to their eminent &highlights with dynamic battery and prove-out-controlling secure software where those high-products sell better and meantime seeking the fitting place with agents in those countries and cities. Thereby, those vehicles may create more capitals from trade enterprises with other nations and territories due to its having above mentioned priorities. If it is possible, there would be more agents to explore and search innovation products session in various cities for one potential nation. Moreover, the local factory is also the best way to create vehicles and sell their directly that the sale may actively process with localization.[1~24]

2. Discussions

All of those academy and trade activities will welcome innovation GDP development at final due to their forceful and activated behaviors that must cause a series of achievement that promotes the GDP increasing value eventually. Those clarified score might result in domestic industrial reformation and innovation gradually that it must be advocated largely for sharing the common chances for other territories and nations. Not only the vehicle industry but also electronic AI(artificial intelligence) robot and quantum computer needs to be transited into other countries so as to acquire the out-source more allocations from the foreign trade activities in China that includes the whole industrial modernization and commercialization with scaled making &diversification planning in future. In addition, the new and old kinetic transformation should be urgently proceeded from traditional low one to modernization and updated strategic planning views that the new one means the more new-quality product must be searched by our scientist &senior engineers from now to future all the time. The hydraulic electric generation, nuclear generator etc. no-contamination- dynamic-source to serve for our new world continually and constantly. All those new-quality products may need to wield their new dynamical one for our research teams to participate rapidly and carefully due to its searching degree and high-cost. The more new energy types will give us more initial energy from nature and

consequently the science proceeds. We should encourage more papers from the scientist and experts all over the whole world to demand participants enjoying those enterprises. [25~26]

2.1 China auto exportation amount nations status analysis

The China auto exportation nations value analysis would indicate might show 5~6.5 ten thousand by Saudi Arabia~Malaysia correspondingly according to the Figure 1 in 2026 Q2 manifested the Italy most forward exportation trajectory with 8 ten thousand vehicles. Meantime, the y-o-y growth value might afford 22%~38% by them accordingly to manifest the Malaysia highest exportation pace beyond Italy in 2025 Q2.

Figure 1 China auto exportation amount nations status analysis. [1]

The China auto exportation nations value analysis would indicate might show 8.4~5 ten thousand by Algeria~South Africa correspondingly according to the Figure 2 in 2026 Q2 manifested the Algeria most forward exportation vehicle trajectory. Meantime, the y-o-y growth value might afford 40%~32% by them accordingly to manifest the Algeria highest exportation pace in 2025 Q2. on the contrary, the UAE remained the lowest minus pace with -72% then.

Figure 2 China auto exportation amount nations status analysis I. [1]

Furthermore, the China auto exportation nations value analysis would indicate might show 4~5 ten thousand by Chile~Korea(Rep) correspondingly according to the Figure 3 in 2026 Q2 manifested the Giergistan most forward exportation vehicle trajectory with 5.5 ten thousand vehicles. Meantime, the y-o-y growth value might afford 5%~43% by them accordingly to manifest the Giergistan highest exportation pace with 57% in 2025 Q2.

2.2 Introduction to the Journal of Alzheimer's Disease & Reports

We sincerely appreciate your continued interest in our journal. As a kind reminder, we would be grateful if you could submit your another article on or before September 05, 2026, for consideration in our upcoming issue. If your manuscript is ready, please submit it as an email attachment or via our online submission portal site. We look forward to receiving your valuable manuscript and to continuing our academic association with you. [2] Thereby, we are pleased to invite your submission to our journal for commonly contributed to each other, we are to publish your precious one after passing peer reviews course as soon as possible.

Furthermore, the China auto exportation nations value analysis would indicate might show 4~5 ten thousand by Chile~Korea(Rep) correspondingly according to the Figure 3 in 2026 Q2 manifested the Giergistan most forward exportation vehicle trajectory with 5.5 ten thousand vehicles. Meantime, the y-o-y growth value might afford 5%~43% by them accordingly to manifest the Giergistan highest exportation pace with 57% in 2025 Q2.

In summary, the vehicle may reflect one nation and region economic activities that also influences the GDP value in final, so that we should continuously wield our scientist and experts capabilities in all the course of auto making procedure for the sake of declining materials and making cost and raising its multi-functional usefulness at the same time contributing to the demand from trending domestic society and auto abroad market too. Moreover, the author might proceed a course to explore the

related performance for new substance and theory and publish in journals to be read by peers that is also dedicated to the similar demand from making process so as to raise its innovation function update and having more new ideas from the research course. With regards to increasing high-tech product there would be emerging more high-functional ones into society market with domestic and abroad market continuously for us to grasp the new developed market through cultivating the global new energy vehicle market sustainably by our sale teams distributed in the whole countries specially in USA and Europe ones due to their richness capital and high-developed and high-mature markets. Thereby, the more the local agents might be erected through the emphasis in those mentioned continents for the sake of expanding the new functional vehicle and other high-end device to those countries primarily. [27~28]

3. Conclusions

The high-end making, new energy &AI (artificial intelligence) robot will occupy the new reformation field so that the much R &D (research and development) and investment is to be added continually by our government, maker & university. On the other hand, the expertise research must be much stronger, deeper & wider so the related performance is to be published in high-level & high-advanced journal with that paper. That needs to reflect the external and internal intrinsic relationship about searching object defect and inner stress & temperature etc. many physical and chemistry aspects. Therein many relational information can be acquired by our scientist and fellows for them to continuously find and seek the principle result on behalf of complicated exploration about the unbalance and balance relation so as to acquire the virtual and actual phenomena and theoretical base. We should encourage the fellows research aim and direction, thereby the subsequent capital support by government institution and institute and making house and devices etc a series of preferential policy. The more product and equipment made from maker will enhance our high-technique skill and equipment capacity to satisfy the request coming from the society and foreign remands for us to process the foreign trade business actively from factory to seaport transiting other countries and territories. The old and new energy kinetic transformation needs to be transformed by now urgently, and those old low energy kinetic will be collapsed gradually and ultimately for us to learn new one and some interdisciplinary subject applying to the innovation item. The new renewable energy industry as an important factor to decline the gasoline usefulness on vehicle and factories that may start to change the traditional energy source into the low-contamination & high-renewable fuel at all for us to share in the views of the clean atmosphere with the BEV (battery electric vehicles) and making automation-flow-line and some heat-supplying factories. Thereby, the more searching for those transforming course and endeavors would be requested through arousing the researcher and scholars explored the

source and making process to a certain performance that is to advantage progressing high-functional-equipment making.

Article Publication Details

This article is published in the [International Journal of Multidisciplinary Research and Bulletin](#), ISSN 3108-1428 (Online). In Volume 5 Issue 4 (July – Aug) 2026

The journal is published and managed by [IRPG](#).
