ABSTRACT

The new & old energy kinetic transformation will occupy an important task critically for us to proceed those aspects researches and producing earlier so as to boost our secondary and tertiary industries through erecting special in regulated policy and experimental knowledge and theoretical exploration by engineers and fellows continuously. Meantime, those high-end equipment directly reflects one nations big machinery making ability through connecting all the parts assembling level to complete the tunnels digging role for the sake of increasing the short routes conveniently that is called as shield tunneling machining that played the digging undersea one function as well by now and future. Moreover, the recently heated humanoid robot would be created more that exhibited in Chinese Spring Festival Program with hundred ones to play their dance and jump like human being, demonstrating remarkable coordination and balance. This spectacle highlights the rapid growing advancements in robotics science & technology, where machines are increasingly capable of mimicking complex human movements. Such innovations not only including entertainment but also signifying potential applications in various fields, from manufacturing to healthcare. As these technologies evolve, they promise to enhance efficiency and precision in tasks that were once exclusively human domains, paving the way for a future where humans and robots collaborate seamlessly. At the same time, the payment, entry door, auto-vendor, English speaking App etc. a lot of soft and substantial robots with identifying one face and finger-printer & voice will be prevalent and welcoming now. Only if they identified the reserved face file the payment and buying behavior may be successful that is so easy and no-human-aside automatically, conveniently

besides promptly & precisely On the other hand, the new energy enterprise may become currently prevailed word and a big one for our engineer, scholar, fellow & scientists to search on its detail project defined one~several aspects like the renewable energy exploited and used to applied place whose role is to be transformed into electricity energy upon the wind, solar, nuclear & potential energy by water. Therefore, the new energy vehicle can be playing an important beneficial one where the cheaper price, securitization, lasting time per charge is to be improved hugely according to the recent research results from institute laboratory and maker R & D department. Therein, the new quality productivity transformation would afford prevalence and advancement advantages for our customers to share and enjoy with no-contamination resource ultimately.

Keywords: high-end equipment, GDP systems, an innovation searching, by sustainability, behavior and judgement.

1. Introduction

The potential talents need to be emphasized and trained a periodical education experience so as to raise the competition capacity each other that will take up the usefulness methods to be birthed constantly. The collaborative combination and cooperative spirit will be advocated by us so as to make an innovative item like software program making capacity besides hardware searching and exploration. From the composition to the performance the series experimental with a series of processing stages like combining compositions, processing, evaluating, processing again, evaluating longevity & making product and brain judgement like modeling erection with principle formula will indicate that first one factor to determine the predicting performance result and longevity. So we should investigate broadly and clarify the key points and then start our theoretical modeling exhibition with the help of experimental proof that may bring out many chances for us to process continually.

Meantime, the investment behavior may be proceed by the similar method with experiment and judgment capacity. The first experiment will be done from several thousand stocks in exchange center use portfolio combining strategic plan and then after some time the evaluating its earning will be expressed, and the goodness with AI investment machine and mathematical deduction modeling to analyse the price changes even vibration. Thereby, the financial innovation will make us to be a rich-man that contributes to the tertiary industry enhancement eventually and ultimately. Hence, the reformation idea will occupy the first and important factor for us to master its behavior and judgement like financial one that may bring us more beneficial capital than ever because of the quantization investment and evaluating stock price within 5 thousand stocks. Thereby, the stocks evaluating system will be more prevalent and urgent for our constitution investment behavior. There are so many tips to

tell us following the main capital to win the game that is like a fairy tale story under the help of AI (artificial intelligence) machine.

At the same time, the nations industry advancement will influence our life level like 16° electric consumption per people per day in China 2025. the more energy electric generator has to be increased gradually year by year so as to raise our GDP value eventually besides giving us more comfortable even convenience above 10 times to catch up the USA developed level. Let us do best endeavour to raise our mission for improving GDP value under cooperation and collaboration spiritual courage within R &D dept(research &development department) and laboratory scope that is to become our diligent destination as to so many scientist and scholars. The better way to be successful is still made by ourselves in different occupations that may create huge power to push the high-technique forwards sustainably whilst the achievement can be published in a journal with fluently English narration once we had any spiritual inspirations. [1~12]

2. Discussions

The long and many times experimental trial will be necessary in order to guarantee the product property stably and reliably. As for the stable operation and reliable one the more times and choices will be proceeded according to the product property regarding the essential new composition, then not missing the long life and good performance negligently in maker sample room and ensure that all the parts are to be more qualified than the last one for the sake of transforming them to customer side with more security &reliable one. Therefore, don't stop to provide innovation product with the easy operation to proceed normally and refuse its advancement feature because the smart product is entering our real world definitely and absolutely. Only if we continue to work the advancement science &technology the sophisticated product and following effectiveness may be birthed and advocated gradually and eventually. As a scientist he must proceed his searching to push new measures for the sake of updating the traditional theory &experiment largely. A paper might conclude in the entire big mind and subsidiary diversities to exhibit his performance in front of public readers that contains many sophisticated features and achievements during his a certain time's innovation research. [13~14]

2.1 Five permanent members hydraulic generation analysis

The five permanent nations hydraulic generation situation analysis might show 48~35 billion degrees by France~China correspondingly in 1972 according to the Figure 1 expressed the France &China prosperous hydraulic generation trajectory. The y-y value might exhibit -2% &11% respectively to indicate China mostly forwards developed pace. In contrast, the Britain remained the least pace with 9% then.

Figure 1 Five permanent nations hydraulic generation situation analysis. [1]

Furthermore, the five permanent nations hydraulic generation situation analysis might show 279 & 122 billion degrees by US & Soviet Union correspondingly in 1972 according to the Figure 2 expressed the US prosperous hydraulic generation trajectory. The y-y value might exhibit 0.6% & -1% respectively to indicate their downwards developed pace.

Figure 2 Five permanent nations hydraulic generation situation analysis I. [1]

2.2 Stocks changes

The morning tactic included <Chunfeng Dynamics> with 603129 for motorcycle and vehicle network, <Shiyao Innovations> with 300765 for chemical pharmacy and diet drugs, <Ke Wo Shi> with 603486 for small appliances and robotic concepts. [2] additionally, the recommended ones are to introduce like <Kaiken Holds> with 002012 as to new energy, <Jianshe Industry> with 002265 for AI robot and military, <Xinya Zhichengt> with 002338 for Huawei concepts. [2]

2.3 Yanbian state GDP in the first half of 2026

The Yanbian state GDP in China Jilin province in the first half of 2026 variations would show 0.23~575 billion dollars by primary industry~tertiary one correspondingly indicated the secondary one with 436 billion dollars & tertiary one occupied the second & first position there.

Figure 3 Yanbian state GDP in the first half of 2026 variations. [2]

Meantime, the occupation among them might attain 0, 43% & 57% by the primary, secondary & tertiary industry accordingly in the first half of 2026 explained the upwards economic trajectory step of the region. On the contrary, the primary industry remained a very small fraction with near zero level to demonstrate the potential resilient fraction.

Figure 4 Yanbian state GDP y-y value in the first half of 2026 variations. [2]

In short, the Yanbian state GDP in the first half of 2026 demonstrated a robust economic structure, with the tertiary industry leading in both value and share, while the tertiary one expressed the relatively short trajectory fraction that means the big resilient space. This structural shift underscores a robust transition toward service-oriented growth, with the tertiary sector driving momentum. The steady expansion of the primary and secondary industries provides a stable foundation, while the dominant share of the tertiary industry highlights increasing economic sophistication. Such distribution aligns with broader regional development goals, indicating resilient domestic demand and improved industrial efficiency. Consequently, Yanbian state is well-positioned to sustain this positive trajectory, fostering balanced and high-quality economic progress in the latter half of the year.

3. Conclusions

The new &old energy kinetic transformation will occupy an important task critically for us to proceed those aspects research and producing earlier so as to boost our secondary and tertiary industries through erecting specially in regulated policy and experimental knowledge adding theoretical exploration by engineers and fellows continuously. Meantime, those high-end equipment directly reflects one nations big machinery making ability through connecting all the parts assembling level to complete the tunnels digging role for the sake of increasing the short routes conveniently that is called as shield tunneling machining that played the digging undersea one function as well by now and future. Moreover, the recently heated humanoid robot would be created more that exhibited in Chinese Spring Festival program with hundred ones to play their dance and jump like human being, demonstrating remarkable coordination and balance. This spectacle highlights the rapid advancements in robotics science &technology, where machines are increasingly capable of mimicking complex human movements. Such innovations not only entertain but also signify potential applications in various fields, from manufacturing to healthcare. As these technologies evolve, they promise to enhance efficiency and precision in tasks that were once exclusively human domains, paving the way for a future where humans and robots collaborate seamlessly. At the same time, the payment, entry door, auto-vendor, English speaking App etc. a lot of robots with identifying one face and fingerprinter &voice will be prevalent and welcoming now. Only if they identified the reserved face file the payment and buying behavior may be successful that is so easy and no-human-aside automatically, conveniently besides promptly &precisely. On the other hand, the new energy enterprise may become currently prevailed word and a big one for our engineer, scholar, fellow &scientists to search on its detail project defined one~several aspects like the renewable energy exploited and used to applied place whose role is to be transformed into electricity energy upon the wind, solar, nuclear &potential energy. Therein, the new energy vehicle can be playing an important beneficial one where the cheaper price, securitization, lasting time per charge. Is to be improved according to the recent research results from institute laboratory and maker R &D department. Therefore, the new quality productivity transformation would be prevalence and advancement for our customers to share and enjoy with no-contamination.

Article Publication Details

This article is published in the [International Journal of Multidisciplinary Research and Bulletin](#), ISSN 3108-1428 (Online). In Volume 5 Issue 4 (July – Aug) 2026

The journal is published and managed by [IRPG](#).
