ABSTRACT

The high-end making, new energy & AI (artificial intelligence) robot will occupy the new reformation field so that the much R & D (research and development) and investment is to be added continually by our government, maker & university. On the other hand, the expertise research must be much stronger, deeper & wider so the related performance is to be published in high-level & high-advanced journal with that paper. That needs to reflect the external and internal intrinsic relationship about searching object defect and inner stress & temperature etc. many physical and chemistry aspects. Therein many relational information can be acquired by our scientist and fellows for them to continuously find and seek the principle result on behalf of complicated exploration about the unbalance and balance relation so as to acquire the virtual and actual phenomena and theoretical base. We should encourage the fellows research aim and direction, thereby the subsequent capital support by government institution and institute and making house and devices etc a series of preferential policy. The more product and equipment made from maker will enhance our high-technique skill and equipment capacity to satisfy the request coming from the society and foreign remands for us to process the foreign trade business actively from factory to seaport transiting other countries and territories. The old and new energy kinetic transformation needs to be transformed by now urgently, and those old low energy kinetic will be collapsed gradually and ultimately for us to learn new one and some interdisciplinary subject applying to the innovation item. The new renewable energy industry as an important factor to decline the gasoline usefulness on vehicle and factories that may start to change the traditional energy source into the low-contamination & high-

renewable fuel at all for us to share in the views of the clean atmosphere with the BEV(battery electric vehicles) and making automation-flow-line and some heat-supplying factories. Thereby, the more searching for those transforming course and endeavors would be request through arousing the researcher and scholars explored the source and making process to a certain performance that is to advantage progressing high-functional-equipment making.

Keywords: Progressing high-technique product &GDP systems, by sustainability, an innovated searching, Jiangsu top cities GDP value Changes.

1. Introduction

The foreign and domestic trade business would manifest the advanced aspect recent year that has an important role on transiting goods in one place to others with regards to developed increasingly one region and nation earning much more money from the others and pushed ones from out-resource and nations as to essential items importantly and rarely. So that the corresponding and consistent produce and equipment should become mutually exportation and importation relationships on how to increase the GDP value with many kinds of products produced by us and enjoy the rarely owning ones abroad. Both of exportation and importation will dominate an important occupation because win-win strategic planning and tactic methods might be proposed by our factories and governmental policies for our makers and trade relative research department to proceed continually. Moreover, the enhanced raising rate for trade relations must attain a certain one for the sake of increasing the occupation in one region and one nation which may cause the various businesses actively developed and activate local economic behavior so as to transform the various goods among them contributed the local economy prosperity and perspective eventually.

The high-Technique products need to be continually promoted with the maker activities innovatively and launch producing due to declining original cost per production. That would include in many kinds of ones for us to exploring constantly on how to make more advance high-technique products involving primarily battery-electric-vehicle that may promote one entire industrial chain in secondary one to approach the tertiary field largely for them in details. There are so many parts for high-technique complete goods worked in up-stream and down-stream enterprises that may employ more people and special in newly out-coming graduates from colleges who may burden a drill in training &exercise course and transforming to various relative departments as well. Therefore, only those passing training teaching and active ones may insist in the many years working experience not faulted in the mid-route failure. We should win the strict course inspection and education for them constantly proceed their more fitting work to choose and do maybe.

At last the vehicle and motor as one industrial business should adopted continually to explore and search for the new ones securely and zero accidentally. The rechargeable battery for vehicle needs to be searched for new and innovative one with various compositions like expanded graphene etc ones applied to many dynamic supports. All those may influence on the industrial level strength for our engineer and fellows to chase and transform into the usefulness places. Thereby, the more focus on those new reformation in entire industries chains will be processing as soon as possible. [1~25]

2. Discussions

The long and many times experimental trial will be necessary in order to guarantee the product property stably and reliably. As for the stable operation and reliable one the more times and choices will be proceeded according to the product property regarding the essential new composition, then not missing the long life and good performance negligently in maker sample room and ensure that all the parts are to be more qualified than the last one for the sake of transforming them to customer side with more security & reliable one. Therefore, don't stop to provide innovation product with the easy operation to proceed normally and refuse its advancement feature because the smart product is entering our real world definitely and absolutely. Only if we continue to work the advancement science & technology the sophisticated product and following effectiveness may be birthed and advocated gradually and eventually. As a scientist he must proceed his searching to push new measures for the sake of updating the traditional theory & experiment largely. A paper might conclude in the entire big mind and subsidiary diversities to exhibit his performance in front of public readers that contains many sophisticated features and achievements during his a certain time's innovation research. [26~30]

2.1 Jiangsu top cities GDP value Changes

The Jiangsu province cities GDP amount changes might show 804~1,120 billion yuan by Yancheng~Changzhou city correspondingly in H1 2026 indicated the latter Changzhou one higher economic trajectory according to the Figure 1.

Figure 1 Jiangsu province top 5~8 cities GDP amount changes. [1]

Furthermore, the Jiangsu province cities GDP amount changes might show 483~726 billion yuan by Lianyungang~Taizhou city correspondingly in H1 2026 indicated the latter Taizhou one higher economic trajectory according to the Figure 2.

Figure 2 Jiangsu province cities GDP amount changes I. [1]

2.2 Recent four years exportation amount analysis

The China recent four years exportation amount analysis would indicate 18%~39% in 2022~2025 correspondingly in light of the Figure 3 shown in 2025 prosperous vehicles exportation trajectory pace. Meantime, the biggest y-y value provided 73% in 2023.

Figure 3 China recent four years exportation amount y-y value analysis in 2022~2025. [2]

2.3 2026 H1 top ten exportation regions from China analysis

The 2026 H1 top ten exportation regions from China in 2026 might exhibit 70 thousand~1.1 million by USA &Canada~EU correspondingly according to the Figure 4 to record the European Union prosperously economic strength trajectory. Meanwhile, the Central &South America and Russia

&Central Asia following EU became the second and third occupations with 1.1 million and 0.8 million accordingly.

Figure 4 2026 H1 top ten exportation regions from China in 2026. [3]

Overview, the GDP and trade business would afford more strength if the high-tech product and equipment may be produced by our scientist & fellows at all through developing the emerging direction for public identification. Maybe, there will provide the excellent and good papers with containing more sophisticated and advantageous parameters through the combining theoretical & experimental deducing proof. The more demanded conditions from customer and makers might offer more opportunities for us to proceed constantly and on awareness so that the more high-advantageous-product and equipment with more sophisticated procedures and components to complete ultimately. Therefore, the more high-technique ones have to go oversea looking forwards to receiving those frontiers ones continuously through our scientist and engineers endeavour focused on those tip one.

3. Conclusions

The high-end making, new energy & AI (artificial intelligence) robot will occupy the new reformation field so that the much R & D (research and development) and investment is to be added continually by our government, maker & university. On the other hand, the expertise research must be much stronger, deeper & wider so the related performance is to be published in high-level & high-advanced journal with that paper. That needs to reflect the external and internal intrinsic relationship about searching object defect and inner stress & temperature etc. many physical and chemistry aspects. Therein many relational information can be acquired by our scientist and fellows for them to continuously find and seek the principle result on behalf of complicated exploration about the unbalance and balance relation so as to acquire the virtual and actual phenomena and theoretical base. We should encourage the fellows research aim and direction, thereby the subsequent capital support by government

institution & institute and making house and devices etc. a series of preferential policy. The more product and equipment made from maker will enhance our high-technique skill and equipment capacity to satisfy the request coming from the society and foreign remands for us to process the foreign trade business actively from factory to seaport transiting other countries and territories. The old and new energy kinetic transformation needs to be transformed by now urgently, and those old low energy kinetic will be collapsed gradually and ultimately for us to learn new one and some interdisciplinary subject applying to the innovation item. The new renewable energy industry as an important factor to decline the gasoline usefulness on vehicle and factories that may start to change the traditional energy source into the low-contamination & high-renewable fuel at all for us to share in the views of the clean atmosphere with the BEV (battery electric vehicles) and making automation-flow-line and some heat-supplying factories. Thereby, the more searching for those transforming course and endeavors would be request through arousing the researcher and scholars explored the source and making process to a certain performance that is to advantage progressing high-functional-equipment making.

Article Publication Details

This article is published in the [International Journal of Multidisciplinary Research and Bulletin](#), ISSN 3108-1428 (Online). In Volume 5 Issue 4 (July – Aug) 2026
