ABSTRACT

The vehicle industry will stay an important occupation in the secondary industry that occupies more GDP (gross domestic product) allocation recently with promoting its electric vehicle into our deep level and helping us with its functional AI chip to one. Therefore, the new innovative reformation may be demanded by the modern society requiring amount and quality & functions like security chip for the sake of avoiding the crash accident as soon as possible even zero accident. We should arrange more departments in university and R & D Dept in maker so as to enhance its low-cost and multi-functions device for that secure problem and price declination. On the other side, the more diversity requirement from end-customer who may ride the auto in a busy route may be demanded ultimately. Therefore, the more researcher and study staffs can be recruited and adopted for them to continually clarify and classify those complicated technology into simpler ones in order to produce more smart product and equipment for our user. We could transform the key joints into the actual sample and even launch one later from university and institutes that our maker creates new one from childish stage to mature one step by step. Not only educating our new engineer and scientists but also recruiting matures experts from out-resource makers and even colleges. So that the latent and technology might create a new good-circulation contributed to the maker making level & quality eventually and ultimately. We should develop not only engineers in maker internally but also cultivate the basic experiment and non-derivative one as well for progressing our making speed and amount with low-cost and high-level & high-efficiency contributed to

the more satisfaction from basic demands too in the ultimate view. We should maintain the continual innovation products for avoiding knock-out at all and transforming series derivative products to occupy the instructive market level and capacity. Thereby, the basic besides applied one will be proceeded simultaneously due to experiencing the double-times effort from basis to advance course definitely for owning leadership relation in product making aspect. In short, the auto business as a significant influence might wield its serious role in enhancing GDP value and all kinds of auto series with autonomous driving function for ensuring the drivers and accompanies life and declining damage at all. At the end, the scientist must go on his research constantly not giving up and publish related papers with high-quality in high-impact journal for lasting his research in defined fields after estimating theoretic & experimental course with fully innovative method and calculation modeling capacity sustainably.

Keywords: Progressing high-technique product & GDP systems, estimation; auto making, by sustainability, an innovated searching.

1. Introduction

The potential talents need to be emphasized and trained a periodical education experience so as to raise the competition capacity each other that will take up the usefulness methods to be birthed constantly. The collaborative combination and cooperative spirit will be advocated by us so as to make an innovative item like software program making capacity besides hardware searching and exploration. From the composition to the performance the series experimental with a series of processing stages like combining compositions, processing, evaluating, processing again, evaluating longevity & making product and brain judgment like modeling erection with principle formula will indicate that first one factor to determine the predicting performance result and longevity. So we should investigate broadly and clarify the key points and then start our theoretical modeling exhibition with the help of experimental proof that may bring out many chances for us to process continually.

Meantime, the investment behavior may be proceed by the similar method with experiment and judgment capacity. The first experiment will be done from several thousand stocks in exchange center use portfolio combining strategic plan and then after some time the evaluating its earning will be expressed, and the goodness with AI investment machine and mathematical deduction modeling to analyse the price changes even vibration. Thereby, the financial innovation will make us to be a rich-man that contributes to the tertiary industry enhancement eventually and ultimately. Hence, the reformation idea will occupy the first and important factor for us to master its behavior and judgment like financial one that may bring us more beneficial capital than ever because of the quantization investment and evaluating stock price within 5 thousand stocks. Thereby, the stocks evaluating system will be more prevalent and urgent for our constitution investment behavior. There are so many tips to

tell us following the main capital to win the game that is like a fairy tale story under the help of AI (artificial intelligence) machine.

At the same time, the nations industry advancement will influence our life level like 16° electric consumption per people per day in China 2025. the more energy electric generator has to be increased gradually year by year so as to raise our GDP value eventually besides giving us more comfortable even convenience above 10 times to catch up the USA developed level. Let us do best endeavour to raise our mission for improving GDP value under cooperation and collaboration spiritual courage within R &D dept(research & development department) and laboratory scope that is to become our diligent destination as to so many scientist and scholars. The better way to be successful is still made by ourselves in different occupations that may create huge power to push the high-technique forwards sustainably whilst the achievement can be published in a journal with fluently English narration once we had any spiritual inspirations. [1~26]

2. Discussions

2.1 Nations GDP purchase power analysis

The top nations GDP purchase power analysis might exhibit 2~1.2 trillion dollars by China~France correspondingly according to the Figure 1 in 1994 manifested the USA strongly power there with 7.4 trillion dollars. Meantime, the y-y value manifested 12%~9% by them accordingly showed China forwards developed pace. In contrast, the France & India maintained the second & third occupations with 9% & 7.7% respectively.

Figure 1 Top nations GDP purchase power analysis. [1]

2.2 Taipei & Chinese provinces GDP analysis

The Taipei & Chinese provinces GDP analysis might show 2.8~2.2 trillion yuan by Taipei~Shandong province correspondingly in 2006 according to the Figure 2 manifested the Taipei prosperous economic trajectory. Moreover, the y-y value would exhibit 6%~24% by them accordingly expressed

the Jiangsu & Guangdong provinces exceeding Shandong with 27% & 24% to stay the first and second occupations.

Figure 2 Taipei & Chinese provinces GDP status analysis. [2]

The Taipei & Chinese provinces GDP analysis might show 1.8~1 trillion yuan by Zhejiang~Sichuan province correspondingly in 2006 according to the Figure 3 manifested the Zhejiang prosperous economic trajectory. Moreover, the y-y value would exhibit 25%~22% by them accordingly expressed the Zhejiang province exceeding Henan one with 25% to stay the first occupations.

Figure 3 Chinese provinces GDP status analysis I. [2]

Moreover, the Taipei & Chinese provinces GDP analysis might show 0.4~0.3 trillion yuan by Zhejiang~Sichuan province correspondingly in 1996 according to the Figure 4 manifested the Zhejiang prosperous economic trajectory. Moreover, the y-y value would exhibit 55%~39% by them accordingly expressed the Zhejiang province exceeding Henan one with 45% to stay the first occupations.

Figure 4 Chinese provinces GDP status analysis II. [2]

Summarily, the vehicle may reflect one nation and region economic activities that also influences the GDP value in final, so that we should continuously wield our scientist and experts capabilities in all the course of auto making procedure for the sake of declining materials and making cost and raising its multi-functional usefulness at the same time contributing to the demand from trending domestic society and auto abroad market too. Moreover, the author might proceed a course to explore the related performance for new substance and theory and publish in journals to be read by peers that is also dedicated to the similar demand from making process so as to raise its innovation function update and having more new ideas from the research course. With regards to increasing high-tech product there would be emerging more high-functional ones into society market with domestic and abroad market continuously for us to grasp the new developed market through cultivating the global new energy vehicle market sustainably by our sale teams distributed in the whole countries specially in USA and Europe ones due to their richness capital and high-developed and high-mature markets. Thereby, the more the local agents might be erected through the emphasis in those mentioned continents for the sake of expanding the new functional vehicle and other high-end device to those countries primarily.

3. Conclusions

The high-end making, new energy & AI (artificial intelligence) robot will occupy the new reformation field so that the much R & D (research and development) and investment is to be added continually by our government, maker & university. On the other hand, the expertise research must be much stronger, deeper & wider so the related performance is to be published in high-level & high-advanced journal with that paper. That needs to reflect the external and internal intrinsic relationship about searching object defect and inner stress & temperature etc. many physical and chemistry aspects. Therein many relational information can be acquired by our scientist and fellows for them to continuously find and

seek the principle result on behalf of complicated exploration about the unbalance and balance relation so as to acquire the virtual and actual phenomena and theoretical base. We should encourage the fellows research aim and direction, thereby the subsequent capital support by government institution and institute and making house and devices etc a series of preferential policy. The more product and equipment made from maker will enhance our high-technique skill and equipment capacity to satisfy the request coming from the society and foreign remands for us to process the foreign trade business actively from factory to seaport transiting other countries and territories. The old and new energy kinetic transformation needs to be transformed by now urgently, and those old low energy kinetic will be collapsed gradually and ultimately for us to learn new one and some interdisciplinary subject applying to the innovation item. The new renewable energy industry as an important factor to decline the gasoline usefulness on vehicle and factories that may start to change the traditional energy source into the low-contamination & high-renewable fuel at all for us to share in the views of the clean atmosphere with the BEV(battery electric vehicles) and making automation-flow-line and some heat-supplying factories. Thereby, the more searching for those transforming course and endeavors would be request through arousing the researcher and scholars explored the source and making process to a certain performance that is to advantage progressing high-functional-equipment making.

Article Publication Details

This article is published in the [International Journal of Multidisciplinary Research and Bulletin](#), ISSN 3108-1428 (Online). In Volume 5 Issue 4 (July – Aug) 2026
