ABSTRACT

The vehicle industry will stay an important occupation in the secondary industry that occupies more GDP (gross domestic product) allocation recently with promoting its electric vehicle into our deep level and helping us with its functional AI chip to one. Therefore, the new innovative reformation may be demanded by the modern society requiring amount and quality & functions like security chip for the sake of avoiding the crash accident as soon as possible even zero accident. We should arrange more departments in university and R & D Dept in maker so as to enhance its low-cost and multi-functions device for that secure problem and price declination. On the other side, the more diversity requirement from end-customer who may ride the auto in a busy route may be demanded ultimately. Therefore, the more researcher and study staffs can be recruited and adopted for them to continually clarify and classify those complicated technology into simpler ones in order to produce more smart product and equipment for our user. We could transform the key joints into the actual sample and even launch one later from university and institutes that our maker creates new one from childish stage to mature one step by step. Not only educating our new engineer and scientists but also recruiting mature experts from out-resource makers and even colleges. So that the latent and technology might create a new good-circulation contributed to the maker making level & quality eventually and ultimately. We should develop not only engineers in maker internally but also cultivate the basic experiment and non-derivative one as well for progressing our making speed and amount with low-cost and high-level & high-efficiency contributed to

the more satisfaction from basic demands too in the ultimate view. We should maintain the continual innovation products for avoiding knock-out at all and transforming series derivative products to occupy the instructive market level and capacity. Thereby, the basic besides applied one will be proceeded simultaneously due to experiencing the double-times effort from basis to advance course definitely for owning leadership relation in product making aspect. In short, the auto business as a significant influence might wield its serious role in enhancing GDP value and all kinds of auto series with autonomous driving function for ensuring the drivers and accompanies life and declining damage at all. At the end, the scientist must go on his research constantly not giving up and publish related papers with high-quality in high-impact journal for lasting his research in defined fields after estimating theoretic & experimental course with fully innovative method and calculation modeling capacity sustainably.

Keywords: Progressing high-technique product & GDP systems, estimation, by sustainability, an innovated searching.

1. Introduction

The potential talents need to be emphasized and trained a periodical education experience so as to raise the competition capacity each other that will take up the usefulness methods to be birthed constantly. The collaborative combination and cooperative spirit will be advocated by us so as to make an innovative item like software program making capacity besides hardware searching and exploration. From the composition to the performance the series experimental with a series of processing stages like combining compositions, processing, evaluating, processing again, evaluating longevity & making product and brain judgment like modeling erection with principle formula will indicate that first one factor to determine the predicting performance result and longevity. So we should investigate broadly and clarify the key points and then start our theoretical modeling exhibition with the help of experimental proof that may bring out many chances for us to process continually.

Meantime, the investment behavior may be proceed by the similar method with experiment and judgment capacity. The first experiment will be done from several thousand stocks in exchange center use portfolio combining strategic plan and then after some time the evaluating its earning will be expressed, and the goodness with AI investment machine and mathematical deduction modeling to analyse the price changes even vibration. Thereby, the financial innovation will make us to be a rich-man that contributes to the tertiary industry enhancement eventually and ultimately. Hence, the reformation idea will occupy the first and important factor for us to master its behavior and judgment like financial one that may bring us more beneficial capital than ever because of the quantization investment and evaluating stock price within 5 thousand stocks. Thereby, the stocks evaluating system will be more prevalent and urgent for our constitution investment behavior. There are so many tips to

tell us following the main capital to win the game that is like a fairy tale story under the help of AI (artificial intelligence) machine.

At the same time, the nations industry advancement will influence our life level like 16° electric consumption per people per day in China 2025. the more energy electric generator has to be increased gradually year by year so as to raise our GDP value eventually besides giving us more comfortable even convenience above 10 times to catch up the USA developed level. Let us do best endeavour to raise our mission for improving GDP value under cooperation and collaboration spiritual courage within R &D dept(research &development department) and laboratory scope that is to become our diligent destination as to so many scientist and scholars. The better way to be successful is still made by ourselves in different occupations that may create huge power to push the high-technique forwards sustainably whilst the achievement can be published in a journal with fluently English narration once we had any spiritual inspirations. [1~27]

2. Discussions

The financial income monitors one region economy activity so that the value may reflect the GDP value in same year which influence our life level goodness degree. Therefore, the more that value means more our disposable capital that can use in the infrastructure and help the innovation companies with big number if they are fitting to the advantage condition like non-contaminated transformation enterprise and high-profitable ones with high-technique product making. Therefore, the more new subjects like multi-disciplinary one within Mathematics quantum computer &investment and Administration Artificial intelligence &Computer science and technology etc. will be emerged in future sustainably for our engineers to search for sustainably. Accounting for developing those new emerging interdisciplinary subjects there might be exhibiting new eco-friendly and humanoid ones more and more recently and in near future due to making those robots under the best performance according to simulating one with person profile. Therefore, the more research teams and laboratory would study related content for explaining more sophisticated and maturer robot that can work like human being forever in workshop restaurant business building &family etc. So that they might change the ultimate life conditions and styles in the end upon those man-like robots exhibition in front of public occasions that the automatic ones simulates us to transit some package and lunch etc. service replaced human.

2.1 Linus Pauling

He won the 1954 Noble Prize in Chemistry for his work on chemical bonds and the Noble Peace Prize in 1962 for his peace activism. A decade before winning the first prize, he was diagnosed with Bright's disease, which he treated in part by ingesting vitamin supplements, which he claimed dramatically improved his condition. He later espoused taking high doses of vitamin C to reduce the

likelihood and severity of experiencing the common cold. Pauling himself consumed amounts of vitamin C on a daily basis that were more than 120 times the recommended daily intake. He further argued the megadoses of vitamin C have therapeutic value for treating schizophrenia and for prolonging cancer patients' live. These claims are not supported by the best available science. [1]

2.2 Tianyao Zhou

He is the recipient of the £14,000 Tang Oxford Award in Environmental Science. He is reading for an MSC in water science, policy & management. Tianyao will be attending Worcester College. He is a graduate of Peking University earning a master of law in China studies. He was ranked and in his class of 125. Tianyao studied English literature and linguistics at the university for science and technology in Beijing. He need for improving the pollution problem in China. He wishes to become a writer on the environment or consultant for the Chinese government in policy making for effective environmental changes. Tianyao is from Nanjing in Jiangsu province. [2]

2.3 Academic ranking of world universities in 2026

The Academic ranking of world universities in 2026 might show 63~100 score by Princeton University~Harvard University correspondingly according to the Figure 1 manifested the latter University of Harvard strong academic strength. In contrast, the University of Stanford and MIT following Harvard University occupied the top two and three ones with 80 & 74 score accordingly.

Figure 1 Academic ranking of world top six universities in 2026. [3]

The Academic ranking of world universities in 2026 might show 52~62 score by Cornell University~Oxford University correspondingly according to the Figure 2 manifested the latter Harvard University strongest academic strength.

Figure 2 Academic ranking of top 7~12 world universities in 2026. [3]

2.4 Introduction to the International Journal of Multidisciplinary Research and Bulletin

It is an international, peer-reviewed, open-access scholarly journal dedicated to publishing high-quality, original, and innovative research from all academic disciplines and subject areas. The journal provides a global platform for researchers, academicians, scientists, professionals, practitioners, and policymakers to disseminate significant research findings that contribute to the advancement of knowledge and address contemporary challenges across diverse fields. Meantime, the IJMRB aims to promote multidisciplinary and interdisciplinary research by encouraging collaboration among scholars from different academic backgrounds. The journal welcomes research that integrates theories, methodologies, and applications from multiple disciplines to generate innovative solutions and expand scientific understanding. Through a rigorous peer-review process and adherence to the highest standards of publication ethics, IJMRB is committed to ensuring the quality, originality, and academic integrity of all published articles. Therefore, we are delighted to invite your submission to our journal for the sake of proceeding mutual development, and then we will publish your precious one immediately and cheaply after peer reviews course. [4]

Summarily, the vehicle may reflect one nation and region economic activities that also influences the GDP value in final, so that we should continuously wield our scientist and experts capabilities in all the course of auto making procedure for the sake of declining materials and making cost and raising its multi-functional usefulness at the same time contributing to the demand from trending domestic society and auto abroad market too. Moreover, the author might proceed a course to explore the related performance for new substance and theory and publish in journals to be read by peers that is also dedicated to the similar demand from making process so as to raise its innovation function update and having more new ideas from the research course. With regards to increasing high-tech product there would be emerging more high-functional ones into society market with domestic and abroad market continuously for us to grasp the new developed market through cultivating the global new

energy vehicle market sustainably by our sale teams distributed in the whole countries specially in USA and Europe ones due to their richness capital and high-developed and high-mature markets. Thereby, the more the local agents might be erected through the emphasis in those mentioned continents for the sake of expanding the new functional vehicle and other high-end device to those countries primarily. [28]

3. Conclusions

The high-end making, new energy & AI (artificial intelligence) robot will occupy the new reformation field so that the much R & D (research and development) and investment is to be added continually by our government, maker & university. On the other hand, the expertise research must be much stronger, deeper & wider so the related performance is to be published in high-level & high-advanced journal with that paper. That needs to reflect the external and internal intrinsic relationship about searching object defect and inner stress & temperature etc. many physical and chemistry aspects. Therein many relational information can be acquired by our scientist and fellows for them to continuously find and seek the principle result on behalf of complicated exploration about the unbalance and balance relation so as to acquire the virtual and actual phenomena and theoretical base. We should encourage the fellows research aim and direction, thereby the subsequent capital support by government institution and institute and making house and devices etc. a series of preferential policy. The more product and equipment made from maker will enhance our high-technique skill and equipment capacity to satisfy the request coming from the society and foreign remands for us to process the foreign trade business actively from factory to seaport transiting other countries and territories. The old and new energy kinetic transformation needs to be transformed by now urgently, and those old low energy kinetic will be collapsed gradually and ultimately for us to learn new one and some interdisciplinary subject applying to the innovation item. The new renewable energy industry as an important factor to decline the gasoline usefulness on vehicle and factories that may start to change the traditional energy source into the low-contamination & high-renewable fuel at all for us to share in the views of the clean atmosphere with the BEV (battery electric vehicles) and making automation-flow-line and some heat-supplying factories. Thereby, the more searching for those transforming course and endeavors would be request through arousing the researcher and scholars explored the source and making process to a certain performance that is to advantage progressing high-functional-equipment making.

Article Publication Details

This article is published in the [International Journal of Multidisciplinary Research and Bulletin](#), ISSN 3108-1428 (Online). In Volume 5 Issue 4 (July – Aug) 2026

The journal is published and managed by [IRPG](#).
