ABSTRACT

The vehicle industry will stay an important occupation in the secondary industry that occupies more GDP (gross domestic product) allocation recently with promoting its electric vehicle into our deep level and helping us with its functional AI chip to one. Therefore, the new innovative reformation may be demanded by the modern society requiring amount and quality & functions like security chip for the sake of avoiding the crash accident as soon as possible even zero accident. We should arrange more departments in university and R & D Dept in maker so as to enhance its low-cost and multi-functions device for that secure problem and price declination. On the other side, the more diversity requirement from end-customer who may ride the auto in a busy route may be demanded ultimately. Therefore, the more researcher and study staffs can be recruited and adopted for them to continually clarify and classify those complicated technology into simpler ones in order to produce more smart product and equipment for our user. We could transform the key joints into the actual sample and even launch one later from university and institutes that our maker creates new one from childish stage to mature one step by step. Not only educating our new engineer and scientists but also recruiting mature experts from out-resource makers and even colleges. So that the latent and technology might create a new good-circulation contributed to the maker making level & quality eventually and ultimately. We should develop not only engineers in maker internally but also cultivate the basic experiment and non-derivative one as well for progressing our making speed and amount with low-cost and high-level & high-efficiency contributed to the more satisfaction from basic demands too in the ultimate view. We should maintain the continual innovation products for avoiding knock-out at all and transforming series derivative products to occupy the instructive market level and

capacity. Thereby, the basic besides applied one will be proceeded simultaneously due to experiencing the double-times effort from basis to advance course definitely for owning leadership relation in product making aspect. In short, the auto business as a significant influence might wield its serious role in enhancing GDP value and all kinds of auto series with autonomous driving function for ensuring the drivers and accompanies life and declining damage at all. At the end, the scientist must go on his research constantly not giving up and publish related papers with high-quality in high-impact journal for lasting his research in defined fields after estimating theoretic & experimental course with fully innovative method and calculation modeling capacity sustainably.

1. Introduction

The high-technique skill will wield its forwards economic boosting ability with regards to enhancing the secondary industrial amount and quality for the sake of making new-quality-productivity on behalf of tip deepening fields sustainably and continually. Those fields need our scientists and engineers mutually to complete with cooperative and collaborative spiritual coordination that will be better ways for us to proceed besides that there would be some capacities may independently complete some tip one for a certain definition that arouse some innovation ideas and breakthrough performance as well. After they published the related papers in higher magazines such as SCI(science cited index) that may call us to consider which degree that paper attains with various cutting-edge-field like physics & chemistry, medical & chemistry, medical & physics etc many subjects and departments that may found interdisciplinary subjects based on the detail research themes. As we often saw the famous papers and authors publish their achievement one and two in CNS for our readers to see and simulate that definitely instructs innovation methods with different subjects and interdisciplinary one. Also the mathematical field new finding and proving course with completely formula needs to gain the anticipating result, so that the corresponding awards & money were granted by the society & association. Due to their huge contribution to the modern society development as many as those prize needs to be erected and gives them the corresponding stimulus for the sake of encouraging those big awarding dollars that sequentially searching has to be continued process urgently.

On the other side, the high-technique skill and experience must be transformed into the mature product and equipment through our efforts with maker R & D dept(research & development

department) as for definitely high-tech key parameters like temperature & time through a certain compositions and procedures by them. The innovation company will emerge in factories communities with advantageous policy to get more economic supplier from government sides how a one makes those tip products in light of the market demands in advance to ensure that the grasping more orders within recent years and future ones. At the last, the trade transaction may play an important role in making new energy vehicles in China defined the following aspects. The power-chargeable-battery, electric controlling, security driving-subsidary software with Beidou location & electrical motor designing are included that the entire vehicle test needs to satisfy the corresponding standard by the technological departments. Moreover, those security equipment must be set up in vehicle with four scales grades updated urgently for sake of improving the autonomous driving experience and making sure its strength securely for everyone to drive with non-accident ultimately. That might become the priority turning for us continuously dealing to make sure its function stabilization more and more & day and day.

Therefore, those vehicles may transit into the other territories and nations due to their eminent & high-lights with dynamic battery and prove-out-controlling secure software where those high-products sell better and meantime seeking the fitting place with agents in those countries and cities. Thereby, those vehicles may create more capitals from trade enterprises with other nations and territories due to its having above mentioned priorities. If it is possible, there would be more agents to explore and search innovation products session in various cities for one potential nation. Moreover, the local factory is also the best way to create vehicles and sell there directly that the sale may actively process with localization.[1~28]

2. Discussions

2.1 Stocks price vibration

The <Zhengyuan Wisdom> with 300645 for metaverse and artificial intelligence as a teaching case, <Zhongyi Tech> with 301150 for battery and PCB(Printed circuit board) as a teaching case. Moreover, the Stocks changes in China would include in the following ones with the free welfare. They were <Woai Wojia> with 000560, <Jinghua Pharmacy> with 002349. the others were like <Dayou Energy> with 600403, <Shandong Molong> with 002490, <Gaolan Gufu> with 300499. [1]

2.2 Nations electric generation status analysis

The Nations general electric generation status would indicate 4~0.5 trillion degree by USA~Brazil correspondingly in 2009 to manifest the former USA forwards electric generation

amount. At the same time, the y-o-y growth value might attain 3%~6.5% by them respectively manifested the China with 7% beyond the India with 4.5% and Brazil most forward growth pace. Meanwhile, the China & India electric generation amount might attain 8.1° & 2.2° per capita and per year in 2009 according to the 1.3 billion & 1.1 billion population by them respectively.

Figure 1 Nations electric generation analysis. [2]

2.2 China provincial GDP status

The China provincial GDP status would indicate 0.66 trillion dollars~0.58 trillion dollars by Hubei~Beijing city correspondingly in 2020 in light of the Figure 2 to manifest the former Hubei province forward economy development. Meantime, the y-o-y growth value might attain approximately 0.5% by them respectively manifested the Shanghai with forwards developed pace 2% beyond the other two to become the first occupation.

Figure 2 China provincial GDP status, dollars. [3]

Furthermore, the China provincial GDP status would indicate 0.18 trillion dollars~0.13 trillion dollars by Hunan~Beijing city correspondingly in 2006 in light of the Figure 3 to manifest the former Hunan province forward economy development. Meantime, the y-o-y growth value might

attain approximately 28% by them manifested the Shanghai with lowliest forwards developed pace 20% following the other two to become the last occupation.

Figure 3 China provincial & Denmark GDP status I. [3]

3. Conclusions

All of those academy and trade activities will welcome innovation GDP development at final due to their forceful and activated behaviors that must cause a series of achievement that promotes the GDP increasing value eventually. Those clarified score might result in domestic industrial reformation and innovation gradually that it must be advocated largely for sharing the common chances for other territories and nations. Not only the vehicle industry but also electronic AI (artificial intelligence) robot and quantum computer needs to be transited into other countries so as to acquire the out-source more allocations from the foreign trade activities in China that includes the whole industrial modernization and commercialization with scaled making & diversification planning in future. In addition, the new and old kinetic transformation should be urgently proceeded from traditional low one to modernization and updated strategic planning views that the new one means the more new-quality-productivity must be searched by our scientist & senior engineers from now to future all the time. The hydraulic electric generation, nuclear generator etc. no-contamination- dynamic-source to serve for our new world continually and constantly. All those new-quality productivity may need to wield their new dynamical one for our research teams to participate rapidly and carefully due to its searching degree and high-cost. The more new energy types will give us more initial energy from nature and consequently the science proceeds. We should encourage more papers from the scientist and experts all over the world to demand participants joining those enterprises. Accounted for updating those efforts by us the more engineers and scholars are to process those high-preciseness-tip-field for the

shaking of improving our future scientific and engineering difficult problems in front of our route, and acquire much achievement and performances step by step and urgently for those most difficulties in making and theoretic course exploration at end. The more advanced publication represents the most level and difficult for us to join the new method and principles that includes the most tip direction guider effectiveness to solve a series of most difficult places in electric, electronic, materials & mechanical destination with interdisciplinary subjects. Thereby, the more high-tech product making will represent current most tip field before they are to be made according to the recent artificial intelligence technique to process the physic transiting, medical health diagnosis, drug molecular formation, new materials, aerospace craft & plane etc. many aspects.

Article Publication Details

This article is published in the [International Journal of Multidisciplinary Research and Bulletin](#), ISSN 3108-1428 (Online). In Volume 5 Issue 5 (Sep – Oct) 2026.

The journal is published and managed by [IRPG](#).

Acknowledgements

We sincerely thank the editors and the reviewers for their valuable suggestions on this paper.

Funding

This paper was supported by Korean Science & Engineering Fund (KSEF) at the granted number 96-0300-11-01-03, under Specific Basis Research Program.

Data availability

No datasets were generated or analyzed during the current study.

Declarations

Ethics approval and consent to participate

The author(s) declare that it is not applicable.

Consent for publication

The author(s) declare that this is not applicable.

Competing interests

The author(s) declare that they have no competing interests.
