ABSTRACT

The vehicle industry will stay an important occupation in the secondary industry that occupies more GDP (gross domestic product) allocation recently with promoting its electric vehicle into our deep level and helping us with its functional AI chip to one. Therefore, the new innovative reformation may be demanded by the modern society requiring amount and quality &functions like security chip for the sake of avoiding the crash accident as soon as possible even zero accident. We should arrange more departments in university and R &D Dept in maker so as to enhance its low-cost and multi-functions device for that secure problem and price declination. On the other side, the more diversity requirement from end-customer who may ride the auto in a busy route may be demanded ultimately. Therefore, the more researcher and study staffs can be recruited and adopted for them to continually clarify and classify those complicated technology into simpler ones in order to produce more smart product and equipment for our user. We could transform the key joints into the actual sample and even launch one later from university and institutes that our maker creates new one from childish stage to mature one step by step. Not only educating our new engineer and scientists but also recruiting mature experts from out-resource makers and even colleges. So that the latent and technology might create a new good-circulation contributed to the maker making level &quality eventually and ultimately. We should develop not only engineers in maker internally but also cultivate the basic experiment and non-derivative one as well for progressing our making speed and amount with low-cost and high-level &high-efficiency contributed to the more satisfaction from basic demands too in the ultimate view. We should maintain the continual innovation products for avoiding knock-out at all and transforming

series derivative products to occupy the instructive market level and capacity. Thereby, the basic besides applied one will be proceeded simultaneously due to experiencing the double-times effort from basis to advance course definitely for owning leadership relation in product making aspect. In short, the auto business as a significant influence might wield its serious role in enhancing GDP value and all kinds of auto series with autonomous driving function for ensuring the drivers and accompanies life and declining damage at all. At the end, the scientist must go on his research constantly not giving up and publish related papers with high-quality in high-impact journal for lasting his research in defined fields after estimating theoretic & experimental course with fully innovative method and calculation modeling capacity sustainably.

1. Introduction

The high-technique skill will wield its forwards economic boosting ability with regards to enhancing the secondary industrial amount and quality for the sake of making new-quality-productivity on behalf of tip deepening fields sustainably and continually. Those fields need our scientists and engineers mutually to complete with cooperative and collaborative spiritual coordination that will be better ways for us to proceed besides that there would be some capacities may independently complete some tip one for a certain definition that arouse some innovation ideas and breakthrough performance as well. After they published the related papers in higher magazines such as SCI(science cited index) that may call us to consider which degree that paper attains with various cutting-edge-field like physics & chemistry, medical & chemistry, medical & physics etc many subjects and departments that may found interdisciplinary subjects based on the detail research themes. As we often saw the famous papers and authors publish their achievement one and two in CNS for our readers to see and simulate that definitely instructs innovation methods with different subjects and interdisciplinary one. Also the mathematical field new finding and proving course with completely formula needs to gain the anticipating result, so that the corresponding awards & money were granted by the society & association. Due to their huge contribution to the modern society development as many as those prize needs to be erected and gives them the corresponding stimulus for the sake of encouraging those big awarding dollars that sequentially searching has to be continued process urgently.

On the other side, the high-technique skill and experience must be transformed into the mature product and equipment through our efforts with maker R & D dept(research & development

department) as for definitely high-tech key parameters like temperature & time through a certain compositions and procedures by them. The innovation company will emerge in factories communities with advantageous policy to get more economic supplier from government sides how a one makes those tip products in light of the market demands in advance to ensure that the grasping more orders within recent years and future ones. At the last, the trade transaction may play an important role in making new energy vehicles in China defined the following aspects. The power-chargeable-battery, electric controlling, security driving-subsidary software with Beidou location & electrical motor designing are included that the entire vehicle test needs to satisfy the corresponding standard by the technological departments. Moreover, those security equipment must be set up in vehicle with four scales grades updated urgently for sake of improving the autonomous driving experience and making sure its strength securely for everyone to drive with non-accident ultimately. That might become the priority turning for us continuously dealing to make sure its function stabilization more and more & day and day. [1~30]

2. Discussions

2.1 China & India electric generation status analysis

The China & India electric generation status would indicate 6.3 thousand degrees~1.1 thousand degrees by China~India one correspondingly in 2021 in light of the Figure 1 to manifest the former China forward economy development. Meantime, the y-o-y growth value might attain 15%~23% by them respectively manifested the India forwards developed pace.

Figure 1 China & India electric generation status. [1]

Meanwhile, the China & India electric generation status would indicate 6.7 thousand degrees~1.3 thousand degrees by China~India one correspondingly in 2021 in light of the Figure 2 to manifest the former China forward economy development. Meantime, the y-o-y growth value

might attain 6%~11% by them respectively manifested the India forwards developed pace. In 2021 the China & India maintained 17.3° & 3° per capita and per day in light of the population of 1.3 billion & 1.1 billion respectively where the variation among them indicated 5.5 times there.

Figure 2 China & India electric generation status I. [1]

2.2 Toyota auto world sale amount analysis

The Toyota auto declared today that in light of publishing data the world sale amount including affiliated company Daihatsu finished 91 ten thousand vehicles in July, 2026 on August 28, 2026 message and its y-o-y growth value declined 5.3% while the world generation attained 93.4 ten thousand with its y-o-y growth value decreasing 1.4%. Meantime, from IT family the Toyota auto sold 11.4 ten thousand vehicles in July, 2026 in China with its declining 24%. Therein, Toyota maker expressed that ones including fuel auto, PHEV(plug-in hybrid electric vehicle) gasoline ones by China market influenced by gasoline price increasing would maintain the depression continuously, and the China market in July, 2026 exhibited declining status. Toyota auto completed accumulation sale amount to attain 81 ten thousand vehicles with its y-o-y value declined 18%. [2]

2.3 China two auto makers achievement in H1, 2026

The China SAIC auto makers achievement in H1, 2026 would maintain 73.5 ten thousand vehicles with its general sale number of 2.04 million ones so that it defended top one occupation. Meanwhile, the BYD sold totally 1.8 million vehicles in H1 2026 to drop out 15.7% y-o-y value, and the domestic sale amount attained 1.01 million ones meantime overseas retained 78.8 ten thousand with its y-o-y value increasing 70.5%, where the exportation trajectory attained crowded status. [3] On the other side, the new energy plate was still a high-lighted ones, however it is declining the speed. In 2026 H1, the new energy vehicles producing and sale maintained 7.43

million and 7.44 million ones with its increasing 6.6% and 7% respectively that the new energy new vehicles sale number finished 49% to occupy to the general sale amount with the out- eminent scenery. Meanwhile, the penetrative rate once flushed 63%, however that was transacted upon fuel one with withdrawing to produce allocation and not depended on absolutely increasing amount supporting. The domestic renewable ones amount in H1 2026 would indicate 5.1 million with its y-o-y growth value that declined 13% on the contrary. [4]

Overview, those high-technique product may wield their evidently influenced to trade transaction behavior upon experiencing many years even the potential market conquering and occupation with sea-transit and air-plane etc that the foreign trade will get more opportunities transferring goods to oversea to make national export besides import as well. Meanwhile, the agricultural foster the cattle might automatic &artificial intelligence course for the sake of get more cattle with more quality and nutrition ones from farm that the automatic growth means the smart fostering already is adopted besides that the agricultural machinery big influence in many aspects. That will affect the primary-industrial-development that those transaction already can serve us more nutritional cones like chicken and port etc directly from the factory to the KFC (Kentucky fried chicken) shop. Meanwhile, there would be more and more demands establishing agents all around the world specially in developed nations and nearest nations so as to descend the transit distance and relational charge fee.

3. Conclusions

The high-technology talents like scientist &scholars need to be cultivated upon different field and method like recommended and independent education course who can be responsible for his burden in university and makers completely and diligently. The enough emphasis must be given for the sake of finding his suitable and fitting capacity, especially in owning high-degree certificate and finishing adoption. So that the task in laboratory and R &D(research &development) department needs to grant those the suitable one for them to develop the entire product design and evaluation with several circles for ensuring the product qualification and suiting to the standard specification. The quality would be key factor how the better one might be designed with quickness and cheapness cost that may become the important factor to our maker. No matter what difficult occasions we would experience the better quality and level one must be searched and completed how the low cost one will influence a series of ones sale amount per month. Therefore, the launch experiment in laboratory will be processing firstly, and then transform into the sample one before those may be pushed to the market that can determine the

entire supply chain and related industrial chain as well. The more senior and scientists can make their high-technology research continuously and with defining destination and direction why they develop the good achievement before many years, the reason might be the advancement experience and high-light observation and calculation capacity. So that the senior scholar may use the relational advancement mathematical algorithm capacity to predict and describe the destination requirement so as to continually apply the similar phenomenon explanation to modern satisfaction and making experience and work. If observing the famous journal prevalent in publisher there will be so many high-technique for us to know and apply to our destination if the enough spiritual energy and time is existed absolutely and definitely. Therefore, those high-tech knowledge can apply to the actuality after the sample & launch conditions would be constructed in factory that the important performance could be grasped in university how to transform into the automatic-flow-line in one ultimately etc, a series of problem needing our efforts to follow those knowledge definitely from the suitable papers in publisher. At last, those high-tech goods have more high-function and performance than now that they ascend the GDP in one region and nation through affecting our indeed behavioral efforts to contribute to the modern society and infrastructure etc. strategic planning.

Article Publication Details

This article is published in the [International Journal of Multidisciplinary Research and Bulletin](#), ISSN 3108-1428 (Online). In Volume 5 Issue 5 (Sep – Oct) 2026.

The journal is published and managed by [IRPG](#).

Acknowledgements

We sincerely thank the editors and the reviewers for their valuable suggestions on this paper.

Funding

This paper was supported by the Korean Science & Engineering Fund (KSEF) at the granted number 96-0300-11-01-03, under the Specific Basis Research Programme.

Data availability

No datasets were generated or analyzed during the current study.

Declarations
