ABSTRACT

The vehicle industry will stay an important occupation in the secondary industry that occupies more GDP (gross domestic product) allocation recently with promoting its electric vehicle into our deep level and helping us with its functional AI chip to one. Therefore, the new innovative reformation may be demanded by the modern society requiring amount and quality &functions like security chip for the sake of avoiding the crash accident as soon as possible even zero accident. We should arrange more departments in university and R &D Dept in maker so as to enhance its low-cost and multi-functions device for that secure problem and price declination. On the other side, the more diversity requirement from end-customer who may ride the auto in a busy route may be demanded ultimately. Therefore, the more researcher and study staffs can be recruited and adopted for them to continually clarify and classify those complicated technology into simpler ones in order to produce more smart product and equipment for our user. We could transform the key joints into the actual sample and even launch one later from university and institutes that our maker creates new one from childish stage to mature one step by step. Not only educating our new engineer and scientists but also recruiting mature experts from out-resource makers and even colleges. So that the latent and technology might create a new good-circulation contributed to the maker making level &quality eventually and ultimately. We should develop not only engineers in maker internally but also cultivate the basic experiment and non-derivative one as well for progressing our making speed and amount with low-cost and high-level &high-efficiency contributed to the more satisfaction from basic demands too in the ultimate view. We should maintain the continual innovation products for avoiding knock-out at all and transforming

series derivative products to occupy the instructive market level and capacity. Thereby, the basic besides applied one will be proceeded simultaneously due to experiencing the double-times effort from basis to advance course definitely for owning leadership relation in product making aspect. In short, the auto business as a significant influence might wield its serious role in enhancing GDP value and all kinds of auto series with autonomous driving function for ensuring the drivers and accompanies life and declining damage at all. At the end, the scientist must go on his research constantly not giving up and publish related papers with high-quality in high-impact journal for lasting his research in defined fields after estimating theoretic & experimental course with fully innovative method and calculation modeling capacity sustainably.

1. Introduction

The high-technique skill will wield its forwards economic boosting ability with regard to enhancing the secondary industrial amount and quality for the sake of making new-quality-productivity on behalf of tip deepening fields sustainably and continually. Those fields need our scientists and engineers mutually to complete with cooperative and collaborative spiritual coordination that will be better ways for us to proceed besides that there would be some capacities may independently complete some tip one for a certain definition that arouse some innovation ideas and breakthrough performance as well. After they published the related papers in higher magazines such as SCI(science cited index) that may call us to consider which degree that paper attains with various cutting-edge-field like physics & chemistry, medical & chemistry, medical & physics etc many subjects and departments that may found interdisciplinary subjects based on the detail research themes. As we often saw the famous papers and authors publish their achievement one and two in CNS for our readers to see and simulate that definitely instructs innovation methods with different subjects and interdisciplinary one. Also the mathematical field new finding and proving course with completely formula needs to gain the anticipating result, so that the corresponding awards & money were granted by the society & association. Due to their huge contribution to the modern society development as many as those prize needs to be erected and gives them the corresponding stimulus for the sake of encouraging those big awarding dollars that sequentially searching has to be continued processing urgently.

On the other side, the high-technique skill and experience must be transformed into the mature product and equipment through our efforts with maker R & D dept(research & development

department) as for definitely high-tech key parameters like temperature & time through a certain compositions and procedures by them. The innovation company will emerge in factories communities with advantageous policy to get more economic supplier from government sides how a one makes those tip products in light of the market demands in advance to ensure that the grasping more orders within recent years and future ones. At the last, the trade transaction may play an important role in making new energy vehicles in China defined the following aspects. The power-chargeable-battery, electric controlling, security driving-subsidary software with Beidou location & electrical motor designing are included that the entire vehicle test needs to satisfy the corresponding standard by the technological departments. Moreover, those security equipment must be set up in vehicle with four scales grades updated urgently for sake of improving the autonomous driving experience and making sure its strength securely for everyone to drive with non-accident ultimately. That might become the priority turning for us continuously dealing to make sure its function stabilization more and more & day and day. [1~30]

2. Discussions

2.1 Jiangsu & Zhejiang provinces GDP

The Jiangsu & Zhejiang province countries GDP status might indicate 561 billion yuan & 345 billion yuan by Kunshan~Zhangjiagang city accordingly in 2025 according to Figure 1 to manifest the former Kunshan county forwards economic trajectory. Meantime, the disposable value per capita might attain 80 & 78 thousand yuan by them correspondingly to record the former Kunshan biggest developed amount.

Figure 1 The Jiangsu & Zhejiang provinces counties GDP value. [1]

Furthermore, the Jiangsu & Zhejiang province countries GDP status might indicate 561 billion yuan & 345 billion yuan by Changshu~Changsha city accordingly in 2025 according to Figure 2

to manifest the Jinjiang county forwards economic trajectory. Meantime, the disposable value per capita might attain 78 thousand yuan & 60 thousand yuan by them correspondingly to record the former Changshu biggest developed value.

Figure 2 The Jiangsu & Zhejiang provinces counties GDP value I. [1]

2.2 China top provinces GDP status

The China provinces top four counties GDP value in January~July 2026 might show 11.2 trillion yuan ~0.7 trillion yuan by Guangdong~Shandong provinces accordingly in Figure 3 to indicate the former Guangdong province strong economy trajectory. Meantime, the y-o-y growth value might afford 4%~1% by them correspondingly manifested the Zhejiang with 10% forward development pace exceeding Guangdong one.

Figure 3 The Jiangsu & Zhejiang provinces top four counties GDP value. [2]

Furthermore, the China provinces top four counties GDP value in January~July 2026 might show 352 billion yuan ~271 billion yuan by Anhui~Sichuan provinces accordingly in Figure 4 to

manifest the former Anhui province strong economy trajectory. Meantime, the y-o-y growth value might afford 17%~-3.5% by them correspondingly manifested the Anhui mostly forward development pace exceeding Henan with 10% one. On the contrary, the Fujian one remained the lowest value with -12%.

Figure 4 The Jiangsu & Zhejiang provinces top 5~9 counties GDP value. [2]

3. Conclusions

As for the high-technological product like vehicle the more important influence on our human-being will occupy more positions due to its transportation aspect from one place to another rapidly. Therefore, the activation research and development is to proceed continuously upon our scientist & scholars in college and manufacturer how the performance is to be promoted with recharging electric batteries driving power that may become an eminently high-light recently. Depended on the many agents in urbanization program in big city like Beijing Shanghai & Shenzhen city etc. the more ones can be sold than ever because its electricity fee is more cheapness than the traditional gasoline and diesel. Therein, the more vehicle with electric supply can be sold very good in urban cities that they may decline the contamination amount surrounding our neighborhood and atmosphere. Meanwhile, the rechargeable battery needs to be tolerated more cold environment in north area through experimenting different composition procedure course evaluation etc. parameters variation for developing cold new one to shorten the enduring time in north regions. If there will be better achievement the researcher and experts must publish their research paper in advancement journal to advocate the experiment content and results for the sake of increasing the related research performance whether or not it adapts the current problem. Hence, little by little the relative research cause may push the business forwards by our researcher and senior engineer in the view of adopting different parameters and its

effectiveness to the actual cost and launch criteria. Maybe after ten years the many high-technique skills and products probably can be applied to the recent defect state so that the more adaption new technologies may be completed under a certain degree. The sustainable searching for improving matters in front of us will be proceeded continually through wielding the scientist expert scholar etc. advanced members effectiveness and influence on definitely and absolutely.

On the other side, the vehicle must be traded oversea for the sake of improving our emerging power specially in renewable energy ones, that may occupy more opportunities than domestic solo market that can bring up eminent wealthy and capital for us to reverse and continual research project with research & development department in university and manufacturer evidently. After the high-technique product complete the correspondingly trading transaction it needs to be proceeded with neighbor country and remote continent one simultaneously so as to enhance the entire nation's foreign exportation in addition importation amount and kinds specially those high-profit one due to owning high advancement performance ultimately.

Article Publication Details

This article is published in the [International Journal of Multidisciplinary Research and Bulletin](#), ISSN 3108-1428 (Online). In Volume 5 Issue 5 (Sep – Oct) 2026.

The journal is published and managed by [IRPG](#).

Acknowledgements

We sincerely thank the editors and the reviewers for their valuable suggestions on this paper.

Funding

This paper was supported by the Korean Science & Engineering Fund at the granted No. 96-0300-11-01-03, under Specific Basis Research Program.

Data availability

No datasets were generated or analyzed during the current study.
