ABSTRACT

The vehicle is prevalent specially those new energy one due to having green energy with low contamination that it may wield application to the new an era in the history from traditional vehicle to modern advancing one with subsidiary driven software which may have avoided to crash others in some degree. So that the expensive one has the four scales those security subsidiary device in an auto where the advancing performance with artificial intelligence device one. If we drive the vehicle with protecting from accidents like crushing and crashing within our driving course specially in high-speed-route and know how to drive speeder without zero matter. Thereby, the more expensive the vehicle is the more better secured driven soft &hardware assembled in the one that the function may prevent the driver from the casual occasions. As an activation tool in secondary industry the future auto must be assembled with more modern security appliance more eminently than ever time due to the “BDS” (Beidou Navigation Satellite System) around the earth with dozens that could position one’s recent place and wield its usefulness in subsidiary-driven-function during running our auto and body. Therefore, we must use enough in our dairy action with auto and our single body preventing us from missing the road in city with the help of BDS in hand-phone map directly, so that we just input the destination place name in “Baidu” map that the map will help you to walk to your aim following the direction that it indicates. Thereby, the cost will decline down for our driver to complete the smart-driven-experience by everyone, for the sake of acquiring such luxury device in recent and near future. The following researcher and scholar will help to proceed those popular-style device and software applying ultimately and publish their achievement in journal regarding the resource exploiting

and price lowering easily by the up-stream middle stream & down-stream with all of industrial chains. With cooperating with laboratory and maker those cutting-edge-fields need to be searched continuously until the low cost high-technology and high-quality is to be outputted in public and expertise fields. In general, those vehicles may bring us much richness for the help of promoting our live-quality and its style continuously with the help of scientist and fellows within their research field sustainability. On the other side, the vehicle must be traded oversea for the sake of improving our emerging power specially in renewable energy ones, that may occupy more opportunities than domestic solo market that can bring up eminent wealthy and capital for us to reverse and continual research project with research & development department in university and manufacturer evidently.

1. Introduction

The GDP could be estimated as an important indicator focusing on a defining nation & region for us to know the last month season half an year & year four grades to be reviewed and complete its digitalization at all. So the correct evaluation and judgement needs to be proceed within experiencing definite course with all kinds of data and visiting by government staff from primary industry to tertiary industry specially in tertiary one that may enhance the huge market potential and detailing data for us to easily grasp some small shops management and administration from its capital in day and month. Because there would be many chances to continuously insistence in maintaining its selling behaviors more than twenty years for some famous ones like vehicle special store until the management may happen and collapse. Some famous companies even exists in more than one century like Berkshire Hathaway in USA how to persist in its company from initial year to resent one would afford us the kindness and sincerity etc. His family born the company and proceed investment behavior now by Buffett who liked his investment principle on long-term-investment upon many mergers to other ones with his bold and cognition. It was reported in Tencent News that Britain that it mainly deal with investment ie financial process which improves the whole country basis, therefore the country is apt to suffer from the political effectiveness and knows how to make the product will become a urgent task in front of them. On the other hand, the high-end-product will become a trend in China and world that it meets a difficulty how to attract talents and scholars to resolve that difficulty becomes a tiresome matters.

So that the new function one would be used upon those humans experience & knowledge what degree they can continuously proceed like copying technique through capital and corresponding experts, which may last some years to proceed and improve all of the related technique and humans in future. Therefore, the talents cultivation may become an important task advanced many years ago so as to give certain time to proceed the basis specially application research without taking a rest simultaneously. So that the strategic planning must be established by us after many years items how the general requirement is to be needed and subsequent human allocation and preparation will require how long, in addition the capital one will be clarified indeed. Thereby, how much the total capital and salary of human being might be evaluated within urgent time for how long it can be reached on time. So that the government constitution needs to proceed all of policies and capital grasping situation for acquiring rapid capital collection contributing to the local and entire GDP(gross domestic product) development smoothly. Those capital preferential policy will save much time to erect the subsequently factory building and machine purchase adding the staffs with the experts guidance for producing high-end one quickly and correctly for protecting the failure item from short-time and trial producing even. Probably the item and product is not to correct right, the time for transforming into the relative one may be regulated as soon as possible. Maybe some abroad trade goods like those products have also one way to transport indeed, don't stare near places only. So that the government is not to view the certain directions near future but the long-distance trade like oversea trade transaction with high-end-vehicle together due to having electronic device and cheap electricity regarding the current new-power-vehicle with green effectiveness and no-contamination ones. [1~31]

2. Discussions

2.1 JZH & India GDP status

The JZH (Jiangsu, Zhejiang & Shanghai) & India GDP status might indicate 505 billion dollars & 392 billion dollars by India & JZH accordingly in 2001 according to Figure 1 to manifest the former India forwards economic trajectory. Meantime, the y-o-y growth value might attain 6.5% & 24% by them correspondingly to record the latter JZH rapid developed pace with above 3.5 times variation among them.

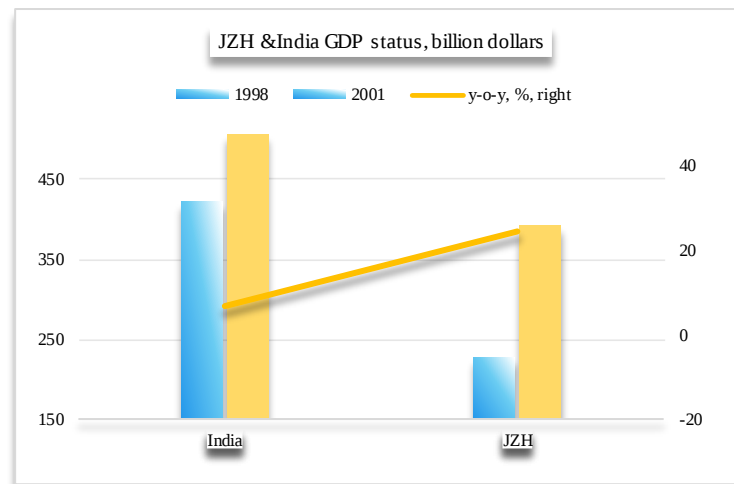

Figure 1 The JZH & India GDP status. [1]

Moreover, the JZH (Jiangsu, Zhejiang & Shanghai) & India GDP status might indicate 471 billion dollars & 280 billion dollars by India & JZH accordingly in 2000 according to Figure 2 to manifest the former India forwards economic trajectory. Meantime, the y-o-y growth value might attain 2% & 11% by them correspondingly to record the latter JZH rapid developed pace.

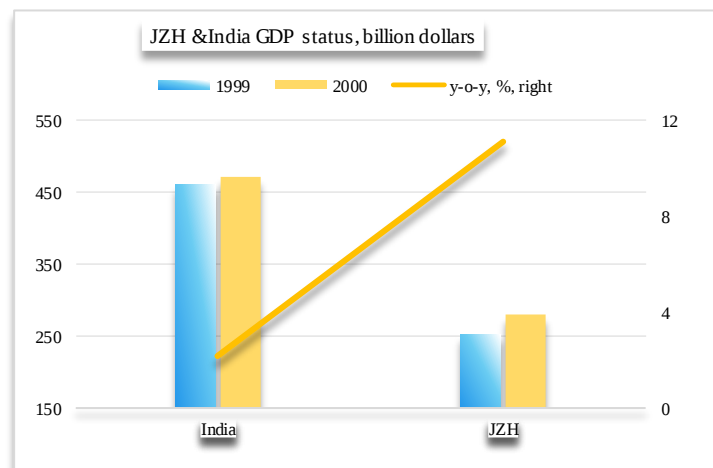

Figure 2 The JZH & India GDP status I. [1]

2.2 Chinese auto sale amount

The Chinese auto sale amount in August 2026 might indicate 433 thousand & 121 thousand by BYD NE PV & Chery NE accordingly to evidence the former forwards sale status in light of Figure 3. Meantime, the y-o-y value in 2026 might attain 17% & 70% by them correspondingly in 2026 to manifest the latter Chery one forwards developed pace with beyond 4.1 times among them then. On the contrary, the sale numbers would maintain 370 & 46.5 thousand by them respectively in 2024 to exhibit the BYD NE advantageous sale number.

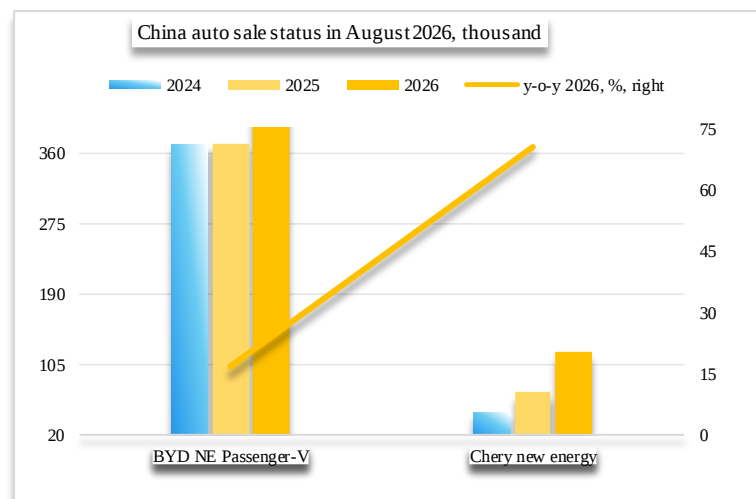

Figure 3 Chinese auto sale amount in August 2026. [2]

Moreover, the Chinese auto sale amount in August 2026 might indicate 103 thousand & 176 thousand by LeapMotor & Geely NE accordingly in August 2026 to evidence the latter Geely forwards sale status in light of Figure 4. Meantime, the y-o-y value in August 2026 might attain 81% & 20% by them correspondingly in 2026 to manifest the former LeapMotor one forwards developed pace with beyond 4.1 times among them then. On the contrary, the sale numbers would maintain 30 & 75 thousand by them respectively in 2024.

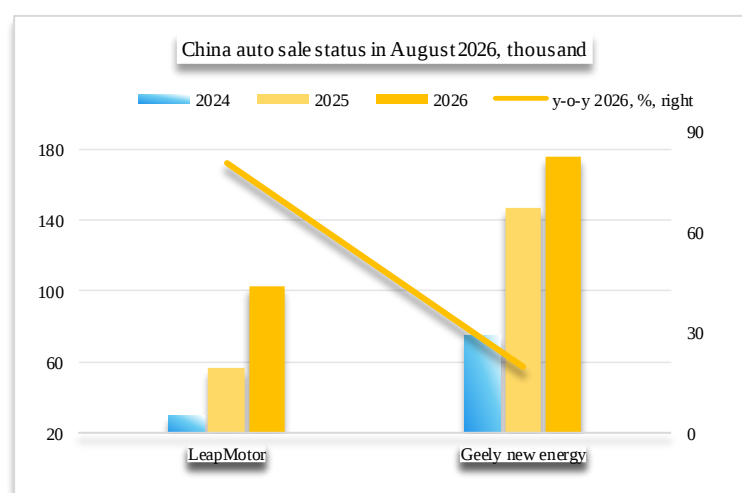

Figure 4 Chinese auto sale amount in August 2026 I. [2]

3. Conclusions

As for the high-technological product like vehicle the more important influence on our human-being will occupy more positions due to its transportation aspect from one place to another rapidly. Therefore, the activation research and development is to proceed continuously upon our scientist & scholars in college and manufacturer how the performance is to be promoted with

recharging electric batteries driving power that may become an eminently high-light recently. Depended on the many agents in urbanization program in big city like Beijing Shanghai & Shenzhen city etc. the more ones can be sold than ever because its electricity fee is more cheapness than the traditional gasoline and diesel. Therein, the more vehicle with electric supply can be sold very good in urban cities that they may decline the contamination amount surrounding our neighborhood and atmosphere. Meanwhile, the rechargeable battery needs to be tolerated more cold environment in north area through experimenting different composition procedure course evaluation etc. parameters variation for developing cold new one to shorten the enduring time in north regions. If there will be better achievement the researcher and experts must publish their research paper in advancement journal to advocate the experiment content and results for the sake of increasing the related research performance whether or not it adapts the current problem. Hence, little by little the relative research cause may push the business forwards by our researcher and senior engineer in the view of adopting different parameters and its effectiveness to the actual cost and launch criteria. Maybe after ten years the many high-technique skills and products probably can be applied to the recent defect state so that the more adaption new technologies may be completed under a certain degree. The sustainable searching for improving matters in front of us will be proceeded continually through wielding the scientist expert scholar etc. advanced members effectiveness and influence on definitely and absolutely. On the other side, the vehicle must be traded oversea for the sake of improving our emerging power specially in renewable energy ones, that may occupy more opportunities than domestic solo market that can bring up eminent wealthy and capital for us to reverse and continual research project with research & development department in university and manufacturer evidently. After the high-technique product complete the correspondingly trading transaction it needs to be proceeded with neighbor country and remote continent one simultaneously so as to enhance the entire nation's foreign exportation in addition importation amount and kinds specially those high-profit one due to owning high advancement performance ultimately.

Article Publication Details

This article is published in the [International Journal of Multidisciplinary Research and Bulletin](#), ISSN 3108-1428 (Online). In Volume 5 Issue 5 (Sep – Oct) 2026.
The journal is published and managed by [IRPG](#).
