ABSTRACT

With regard to promoting the GDP (gross domestic product) value and estimating its correctness how much that one matches all of the domestic economy activities will be explored details and carefully so as to attain the basic residents live conditions approximately. Therein, the government institution needs to be statistic from the regions brought out data and evaluating its corresponding actuality. No matter what it believes the actual data should match the actual one more than 90%, therein the year GDP can represent really the resident actual economy behaviour mostly. Inside that value the tertiary industry will have an important role regarding what the huge market potential capacity have and then the secondary one that the manufacture and infrastructure may represent the pillars influence in the three industrial producing value specially about the y-o-y growth value that may also indicates an important increasing number to compare with the strategic planning one, so that the coming year that value can be made according to the last year economic activity. Hence, the future strategic planning will be made from now on by government constitution for the sake of proceeding the whole economy states compared with the last year and next year is to be regulated the value for ensuring the entire economic activity specially in those developed provinces and urban cities. Therein, the high-technique product can be controlled by us to increase and decrease some degrees that those high-end-product and equipment must be controlled by the government institution because the maintaining the secondary and tertiary industry besides primary one need to be enhanced how much those ones will match the normal level for improving our life gradually and ultimately. In addition, the tertiary industry may include the synthesized dealing capacity for improving the mostly occupations

with high-degree owner and high-end-product transacting behaviour like hospital government institution school etc. many functional units how those ones affect the whole actively economic behaviours becomes an eminently consumptive influences ahead of the secondary and primary ones. At the same year, there would be most peoples lived there e.g. urban city including some downtown areas where the corresponding consumption may be proceeding for us to buy the latest motor and handphone with brand. So that the urban city represents the commercial advertisement crowded place e.g. HongKong island in HK special administration city where the many dealing would proceed from morning to mid-night. Therefore, the advanced and latest product may maintain its charming recent modern society and city due to having their personalized design and performance like Huawei Motor etc. Not only domestic but also those developed nations and regions there might a fantastic attractive power for the sake of occupying those overseas market earlier that the more fashionable goods need to go outside.

1. Introduction

The GDP could be estimated as an important indicator focusing on a defining nation & region for us to know the last month season half an year & year four grades to be reviewed and complete its digitalization at all. So the correct evaluation and judgement needs to be proceed within experiencing definite course with all kinds of data and visiting by government staff from primary industry to tertiary industry specially in tertiary one that may enhance the huge market potential and detailing data for us to easily grasp some small shops management and administration from its capital in day and month. Because there would be many chances to continuously insistence in maintaining its selling behaviors more than twenty years for some famous ones like vehicle special store until the management may happen and collapse. Some famous companies even exists in more than one century like Berkshire Hathaway in USA how to persist in its company from initial year to resent one would afford us the kindness and sincerity etc. His family born the company and proceed investment behavior now by Buffett who liked his investment principle on long-term-investment upon many mergers to other ones with his bold and cognition. It was reported in Tencent News that Britain that it mainly deal with investment ie financial process which improves the whole country basis, therefore the country is apt to suffer from the political effectiveness and knows how to make the product will become a urgent task in front of them.

On the other hand, the high-end-product will become a trend in China and world that it meets a difficulty how to attract talents and scholars to resolve that difficulty becomes a tiresome matters. So that the new function one would be used upon those humans experience & knowledge what degree they can continuously proceed like copying technique through capital and corresponding experts, which may last some years to proceed and improve all of the related technique and humans in future. Therefore, the talents cultivation may become an important task advanced many years ago so as to give certain time to proceed the basis specially application research without taking a rest simultaneously. So that the strategic planning must be established by us after many years items how the general requirement is to be needed and subsequent human allocation and preparation will require how long, in addition the capital one will be clarified indeed. Thereby, how much the total capital and salary of human being might be evaluated within urgent time for how long it can be reached on time. So that the government constitution needs to proceed all of policies and capital grasping situation for acquiring rapid capital collection contributing to the local and entire GDP(gross domestic product) development smoothly. Those capital preferential policy will save much time to erect the subsequently factory building and machine purchase adding the staffs with the experts guidance for producing high-end one quickly and correctly for protecting the failure item from short-time and trial producing even. Probably the item and product is not to correct right, so the time for transforming into the relative one may be regulated as soon as possible. Maybe some abroad trade goods like those products have also one way to transport indeed, don't stare near places only. So that the government is not to view the certain directions near future but the long-distance trade like oversea trade transaction with high-end-vehicle together due to having electronic device and cheap electricity regarding the current new-power-vehicle with green effectiveness and no-contamination ones. [1~30]

2. Discussions

2.1 Guangxi & Inner Mongolia GDP analysis

The Guangxi & Inner Mongolia GDP status might show 135 billion yuan~146 billion yuan by Hohhot~Liuzhou accordingly in 2010 in terms of Figure 1 to exhibit the Erdos exceeding Liuzhou forwards economic momentum with 187 billion yuan. Meantime, the y-o-y growth value might attain 18% ~28% by them respectively manifested Liuzhou highest developed pace as well besides that Erdos maintained the second speed with 27.6%.

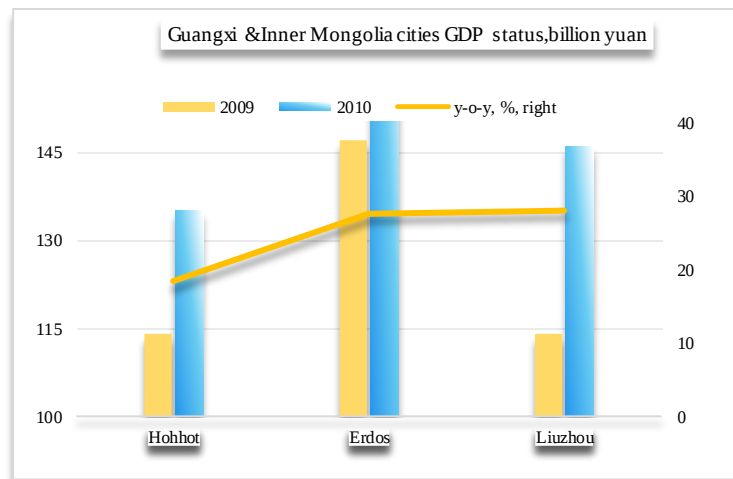

Figure 1 The Guangxi & Inner Mongolia GDP status. [1]

Moreover, the Guangxi & Inner Mongolia GDP status might show 202 billion yuan~122 billion yuan by Nanning~Guilin city accordingly in 2010 in terms of Figure 2 to exhibit the Nanning city forwards economic momentum. Meantime, the y-o-y growth value might attain 25% ~22% by them respectively manifested Nanning highest developed pace as well besides that Baotou city maintained the third & lowest speed with 14%.

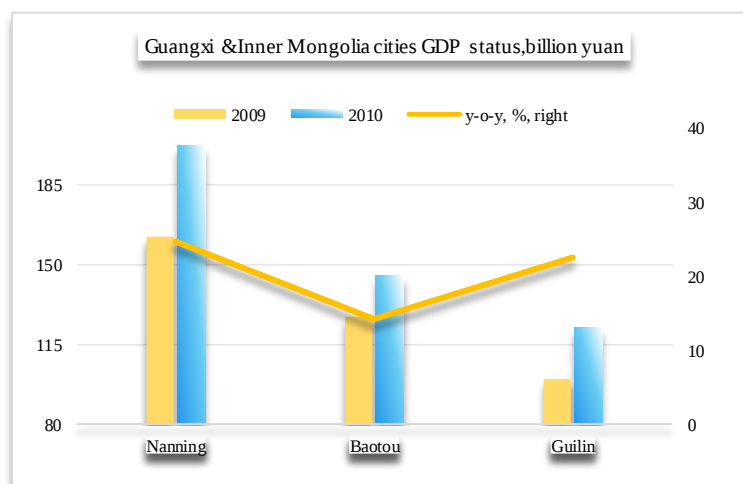

Figure 2 The Guangxi & Inner Mongolia GDP status I. [1]

2.2 Stocks price variations

On September 8 2026 the recommended stocks was as below. There were the <China Publisher>, <Zhongshui Yuye>, <Xinhua Du>, <North Copper One> & <Xingshen Technology>. Meanwhile, the following would be the morning welfare ones. There were the <Yuandong Shares> with 600869, <Jinan Internation> with 002636, <Hanbo Gaoxin> with 301321 for Huawei and Panel. [2]

2.3 Guangxi & Inner Mongolia GDP analysis I

The Guangxi & Inner Mongolia city GDP status might show 33 billion yuan~25 billion yuan by Nanning~Guilin city accordingly in 1997 in terms of Figure 3 to exhibit the Nanning city forwards economic momentum. Meantime, the y-o-y growth value might attain 15% ~7% by them respectively manifested Nanning city the highest developed pace beyond the other two.

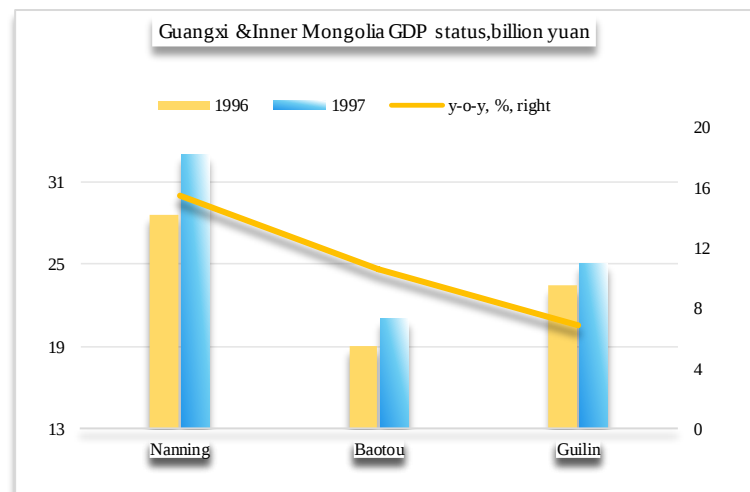

Figure 3 The Guangxi & Inner Mongolia city GDP status. [1]

3. Conclusions

As for the high-technological product like vehicle the more important influence on our human-being will occupy more positions due to its transportation aspect from one place to another rapidly. Therefore, the activation research and development is to proceed continuously upon our scientist & scholars in college and manufacturer how the performance is to be promoted with recharging electric batteries driving power that may become an eminently high-light recently. Depended on the many agents in urbanization program in big city like Beijing Shanghai & Shenzhen city etc. the more ones can be sold than ever because its electricity fee is more cheapness than the traditional gasoline and diesel. Therein, the more vehicles with electric supply can be sold very well in urban cities that they may decline the contamination amount surrounding our neighborhood and atmosphere. Meanwhile, the rechargeable battery needs to be tolerated more cold environment in north area through experimenting different composition procedure course evaluation etc. parameters variation for developing cold new one to enhance the enduring time in north regions. If there will be better achievement the researcher and experts must publish their research paper in advancement journal to advocate the experiment content and results for the sake of increasing the related research performance whether or not it adapts the current problem. Hence, little by little the relative research cause may push the business forwards by our

researcher and senior engineer in the view of adopting different parameters and its effectiveness to the actual cost and launch criteria. Maybe after ten years the many high-technique skills and products probably can be applying to the recent defect state so that the more adaption new technologies may be completed under a certain degree. The sustainable searching for improving matters in front of us will be proceeded continually through wielding the scientist expert scholar etc. advanced members effectiveness and influence on definitely and absolutely.

On the other side, the vehicle must be traded oversea for the sake of improving our emerging power specially in renewable energy ones, that may occupy more opportunities than domestic solo market that can bring up eminent wealthy and capital for us to reverse and continual research project with research & development department in university and manufacturer evidently. After the high-technique product complete the correspondingly trading transaction it needs to be proceeded with neighbor country and remote continent one simultaneously so as to enhance the entire nation's foreign exportation in addition importation amount and kinds specially those high-profit one due to owning high advancement performance ultimately.

Article Publication Details

This article is published in the [International Journal of Multidisciplinary Research and Bulletin](#), ISSN 3108-1428 (Online). In Volume 5 Issue 5 (Sep – Oct) 2026.

The journal is published and managed by [IRPG](#).

Acknowledgements

We sincerely thank the editors and the reviewers for their valuable suggestions on this paper.

Funding

This paper was supported by Korean Science & Engineering Fund (KSEF) at the granted No. 96-0300-11-01-03, under Specific Basis Research Program.

Data availability

No datasets were generated or analyzed during the current study.
