ABSTRACT

The cities' GDP will compare different ones for seeing the variation among the similar ones know how they would improve that one through analyzing the local situation and its surround cities and meantime learn the priority and better ones' experience from other excellent places as well. The better practice may produce the better achievement that may help us rapidly enhance its economy state through main aspects attainment to same level with other good one. So that the efforts must proceed from now on to propose five-years strategic planning even more than ten-years how the detailing transaction behavior would proceed alignment in actual one with detailing allocation by government constitution and think tank rapidly and priority preparation. After they pass the related members meeting the all of preferential items must regulate into those aimed company bringing out the high-technique industrial innovation that might form security high-profit &high-efficient industry dynamic to push the tertiary, secondary &primary ones positively. Meanwhile, the vehicle special new energy one will wield its strong power in secondary industry due to needing a lot of assembling the mechanical electric electronic decoration aspects that they may occupy many industrial supplies ultimately. So the vehicle industry can play an important role in the steel artificial intelligent program chemical &new materials etc. requirement from supplying maker in up-stream ones. Therefore, the synthesis materials and software will play importantly effectiveness in promoting GDP value and y-o-y growth value primarily as a pillar influence represented the key secondary one occupations. On the other hand, the new technique still demand many researcher and experts to continually search the details direction around the new energy vehicle including its rechargeable-battery performance to which the innovation product can be applied like subsidiary-driven software in

order to secure driving in high-speed and complicated roads. There would still many searching direction in supporting the new-energy-vehicle development basis and its research content like how to decline the contaminated fuel exhaust emissions that may influence human being health and climate change & public sanitation. So that as for improving atmosphere and clean air quality the new productivity must be advocated and used based on hydrogen fuel hydraulic power nuclear generation station etc. many aspects for us to positively search sustainably. As for developing agricultural automatic device like supplying water with suitable temperature and amount upon artificial intelligent management and advance agricultural machinery accelerating research and its applications to the actual occasions that it will accelerate the entire work efficiency & speed with electric power even hydrogen fuel with precision work efficiency and low fuel cost than traditional diesel machine.

1. INTRODUCTION

The GDP could be estimated as an important indicator focusing on a defining nation & region for us to know the last month season half an year & year four grades to be reviewed and complete its digitalization at all. So the correct evaluation and judgement needs to be proceed within experiencing definite course with all kinds of data and visiting by government staff from primary industry to tertiary industry specially in tertiary one that may enhance the huge market potential and detailing data for us to easily grasp some small shops management and administration from its capital in day and month. Because there would be many chances to continuously insistence in maintaining its selling behaviors more than twenty years for some famous ones like vehicle special store until the management may happen and collapse. Some famous companies even exists in more than one century like Berkshire Hathaway in USA how to persist in its company from initial year to resent one would afford us the kindness and sincerity etc. His family born the company and proceed investment behavior now by Buffett who liked his investment principle on long-term-investment upon many mergers to other ones with his bold and cognition. It was reported in Tencent News that Britain that it mainly deal with investment ie financial process which improves the whole country basis, therefore the country is apt to suffer from the political effectiveness and knows how to make the product will become a urgent task in front of them.

On the other hand, the high-end-product will become a trend in China and world that it meets a difficulty how to attract talents and scholars to resolve that difficulty becomes a tiresome matters. So that the new function one would be used upon those humans experience & knowledge what degree they can continuously proceed like copying technique through capital and corresponding experts, which may last some years to proceed and improve all of the related technique and humans in future. Therefore, the talents cultivation may become an important task advanced many years ago so as to give certain time to proceed the basis specially application research without taking a rest simultaneously. So that the strategic planning must be established by us after many years items how the general requirement is to be needed and subsequent human allocation and preparation will require how long, in addition the capital one will be clarified indeed. Thereby, how much the total capital and salary of human being might be evaluated within urgent time for how long it can be reached on time. So that the government constitution needs to proceed all of policies and capital grasping situation for acquiring rapid capital collection contributing to the local and entire GDP(gross domestic product) development smoothly. Those capital preferential policy will save much time to erect the subsequently factory building and machine purchase adding the staffs with the experts guidance for producing high-end one quickly and correctly for protecting the failure item from short-time and trial producing even. Probably the item and product is not to correct right, so the time for transforming into the relative one may be regulated as soon as possible. Maybe some abroad trade goods like those products have also one way to transport indeed, don't stare near places only. So that the government is not to view the certain directions near future but the long-distance trade like oversea trade transaction with high-end-vehicle together due to having electronic device and cheap electricity regarding the current new-power-vehicle with green effectiveness and no-contamination ones. [1~30]

2. Discussions

2.1 Swiss Chinese motor sale amount analysis

The Swiss motor sale amount top ones in August, 2026 analysis might indicate 4,800~2,500 by BEV~Petrol accordingly in August 2026 manifested the former BEV strong economic trajectory following HEV with 5,900 in terms of Figure 1. Meantime, the y-o-y growth value would afford 48% & -33% by them correspondingly to evidence the former BEV forwards developed pace. In addition, the PHEV remained 1,900 with the lowest occupation among them.

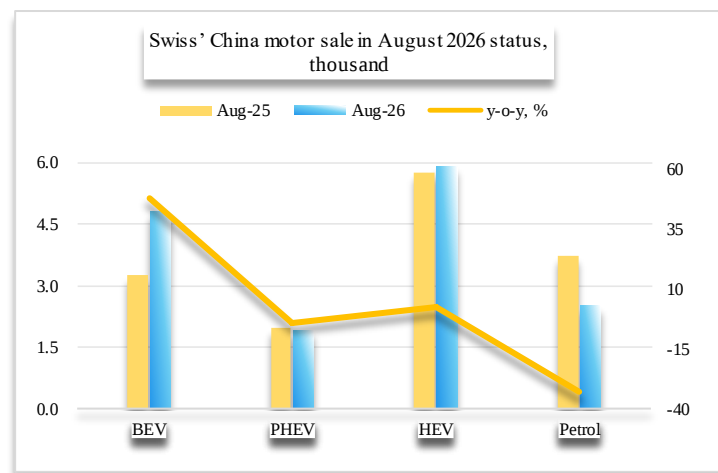

Figure 1 Swiss Chinese motor sale amount analysis. [1]

Moreover, the Swiss motor sale amount top ones in August, 2026 analysis might indicate 471~329 by Mercedes Glc~Toyota Yaris accordingly in August 2026 manifested the former Mercedes strong economic trajectory in terms of Figure 2. Meantime, the y-o-y growth value would afford 76% &17% by them correspondingly to evidence the former Mercedes following VW Golf with 112% forwards developed pace. In addition, the VW Tiguan remained 348 with the third occupation among them.

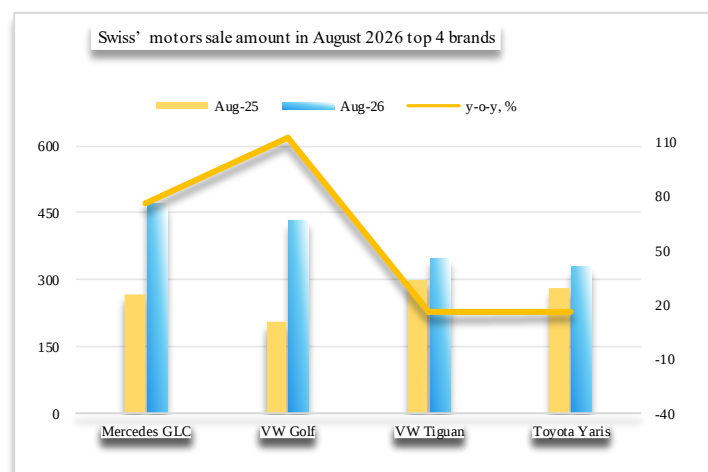

Figure 2 Swiss motors sale amount top four analysis. [1]

Meanwhile, the Swiss motor sale amount top 4 in August, 2026 analysis might indicate 1,700~1,300 by VW~BMW accordingly in August 2026 manifested the former BEV strong economic trajectory in terms of Figure 3. Meantime, the y-o-y growth value would afford -9% &22% by them correspondingly to evidence the former BEV above Mercedes with 14% forwards developed pace. In addition, the Skoda remained to sell 1,400 ones and 14% pace with the moderate occupation among them.

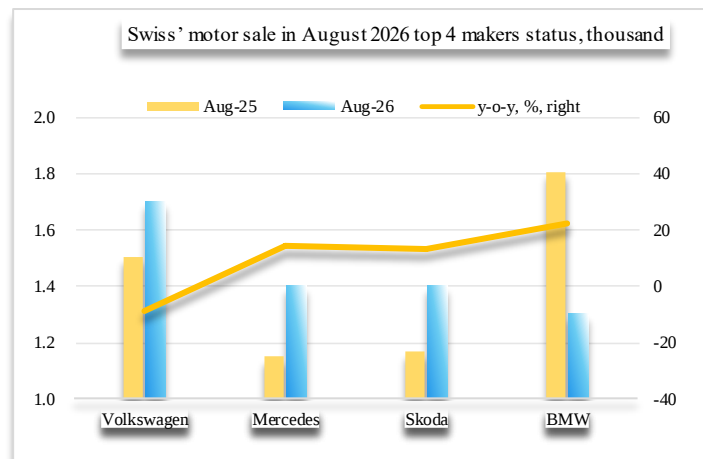

Figure 3 Swiss motors sale amount top four analysis. [1]

2.2 EU & Japan goods exportation analysis

The EU & Japan goods exportation analysis might indicate 1,402 billion dollars & 288 billion dollars by EU & Japan accordingly in 2003 in light of Figure 4 to exhibit the former EU strong exportation capacity. Meantime, the y-o-y growth value would attain 18% by both of them manifested their forwards developed pace.

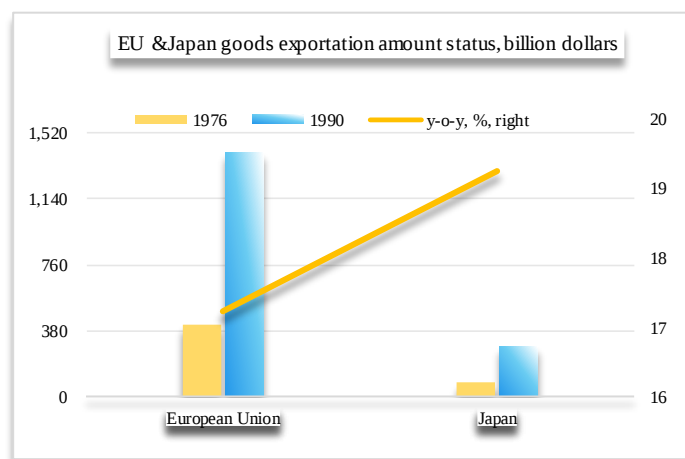

Figure 4 EU & Japan Goods exportation analysis. [2]

3. Conclusions

As for the high-technological product like vehicle the more important influence on our human-being will occupy more positions due to its transportation aspect from one place to another rapidly. Therefore, the activation research and development is to proceed continuously upon our scientist & scholars in college and manufacturer how the performance is to be promoted with recharging electric batteries driving power that may become an eminently high-light recently. Depended on the many agents in urbanization program in big city like Beijing Shanghai

&Shenzhen city etc. the more ones can be sold than ever because its electricity fee is more cheapness than the traditional gasoline and diesel. Therein, the more vehicle with electric supply can be sold very good in urban cities that they may decline the contamination amount surrounding our neighborhood and atmosphere. Meanwhile, the rechargeable battery needs to be tolerating more cold environment in north area through experimenting different composition procedure course evaluation etc. parameters variation for developing cold new one to shorten the enduring time in north regions. If there will be better achievement the researcher and experts must publish their research paper in advancement journal to advocate the experiment content and results for the sake of increasing the related research performance whether or not it adapts the current problem. Hence, little by little the relative research cause may push the business forwards by our researcher and senior engineer in the view of adopting different parameters and its effectiveness to the actual cost and launch criteria. Maybe after ten years the many high-technique skills and products probably can be applied to the recent defect state so that the more adaption new technologies may be completed under a certain degree. The sustainable searching for improving matters in front of us will be proceeded continually through wielding the scientist expert scholar etc. advanced members effectiveness and influence on definitely and absolutely.

On the other side, the vehicle must be traded oversea for the sake of improving our emerging power specially in renewable energy ones, that may occupy more opportunities than domestic solo market that can bring up eminent wealthy and capital for us to reverse and continual research project with research &development department in university and manufacturer evidently. After the high-technique product complete the correspondingly trading transaction it needs to be proceeded with neighbor country and remote continent one simultaneously so as to enhance the entire nation's foreign exportation in addition importation amount and kinds specially those high-profit one due to owning high advancement performance ultimately.

Article Publication Details

This article is published in the [International Journal of Multidisciplinary Research and Bulletin](#), ISSN 3108-1428 (Online). In Volume 5 Issue 5 (Sep – Oct) 2026.

The journal is published and managed by [IRPG](#).

Acknowledgements

We sincerely thank the editors and the reviewers for their valuable suggestions on this paper.

Funding

This paper was supported by Korean Science & Engineering Fund (KSEF) at the granted No. 96-0300-11-01-03, under Specific Basis Research Program.

Data availability

No datasets were generated or analyzed during the current study.
