ABSTRACT

The cities' GDP will compare different ones for seeing the variation among the similar ones know how they would improve that one through analyzing the local situation and its surround cities and meantime learn the priority and better ones' experience from other excellent places as well. The better practice may produce the better achievement that may help us rapidly enhance its economy state through main aspects attainment to same level with other good one. So that the efforts must proceed from now on to propose five-years strategic planning even more than ten-years how the detailing transaction behavior would proceed alignment in actual one with detailing allocation by government constitution and think tank rapidly and priority preparation. After they pass the related members meeting the all of preferential items must regulate into those aimed company bringing out the high-technique industrial innovation that might form security high-profit & high-efficient industry dynamic to push the tertiary, secondary & primary ones positively. Meanwhile, the vehicle special new energy one will wield its strong power in secondary industry due to needing a lot of assembling the mechanical electric

electronic decoration aspects that they may occupy many industrial supplies ultimately. So the vehicle industry can play an important role in the steel artificial intelligent program chemical & new materials etc. requirement from supplying maker in up-stream ones. Therefore, the synthesis materials and software will play importantly effectiveness in promoting GDP value and y-o-y growth value primarily as a pillar influence represented the key secondary one occupations. On the other hand, the new technique still demand many researcher and experts to continually search the details direction around the new energy vehicle including its rechargeable-battery performance to which the innovation product can be applied like subsidiary-driven software in order to secure driving in high-speed and complicated roads. There would still many searching direction in supporting the new-energy-vehicle development basis and its research content like how to decline the contaminated fuel exhaust emissions that may influence human being health and climate change & public sanitation. So that as for improving atmosphere and clean air quality the new productivity must be advocated and used based on hydrogen fuel hydraulic power nuclear generation station etc. many aspects for us to positively search sustainably. As for developing agricultural automatic device like supplying water with suitable temperature and amount upon artificial intelligent management and advance agricultural machinery accelerating research and its applications to the actual occasions that it will accelerate the entire work efficiency & speed with electric power even hydrogen fuel with precision work efficiency and low fuel cost than traditional diesel machine.

1. INTRODUCTION

The industry as an important influence to our economy activity has three aspects that includes primary industry secondary one & tertiary one, so that how to play their effectiveness correctly will has a significant meaning to our GDP(gross domestic product) value ascending and descending every year through working and investigating by relative government constitution. Therefore, as an important role the tertiary industry has huge developed space for our senior staffs to make a strategic planning within five years for future when the actual achievement can be compared with plan certainly. The transparent report about proceeding plans will be monitored and reflected by special department like inspection one where many capital expenditure situation might be audited to judge whether there would happen corruption & bribe-taking accident during a certain period. So that the fair and objective GDP growth value must be

progressed upon all of us to monitor that represents the actual society for modernization without fault effectiveness. For example, in India the virtual GDP would be proceeded included the detailing items like all of the shops action situation, so that the inflating data constructed the GDP inclusions. It looks like so much one there in 2025 that may create defaults one in their proposal report in light of Tencent News. Therein, how the reasonable value can present the actuality one that will be active and include the inferior and superior businesses with regulating local resident business reality live levels that is to be required by our government institution. They would re-evaluate the correctness with more suitable equally ascending report from based sides.

For the sake of resolving those equalization value there the objection observation and calculative courses must be proposed by the government and exhibit that the enough transparency is to be processed, or the default one may bring out illusive imagines only which is really bad one to all of us. So that enhancing the tertiary investment and courage policies need to be granted from government side so as to promote our GDP behavior and judgment must be carrying out upon us urgently. On the other side, that main pillar role lies in the secondary one with infrastructure and innovation projects etc state the making goods capacity for our citizen to enjoy like the NEV(new energy vehicles) from Chinese localization through different supplying manufacturer in up-stream and middle one to intersect into down-stream enterprises smoothly with forming some industrial chains. The public infrastructure like park playground with gym devices road erection architecture building and fix & upgrade etc. many aspects where we could get the real benefit contributed to the resident live and life from government making decision division. At last the high-tech product related maker building with advance product like photovoltaic hydrogen fuel driven system wind turbine blade hydraulic generation would be listed in future main energy supply withdrawing the traditional carbon fuel. [1~27]

2. Discussions

The good GDP region and nations have good environmental conditions for us to feel health and leisure that the exercise device like playground and other healthy appliances are full in the neighbourhood space and parks. So that the certain body exercise needs to be proceeded often specially those older ones that they are lack of sport actions to keep up with their body and heart cooperation and convenience in the modern society. So the citizen can proceed their better them with delaying their longevity and happiness for the sake of promoting the whole society expending their leisure time in those places. There would be one sentence the more movement

makes the better condition so how to adapt their leisure time to spend a meaningful exercise and enjoy the good moods simultaneously.

2.1 Top nation vehicles sale status

The top nation sale amount analysis might indicate 450 million vehicles~1,100 million vehicles by USA, 1940~Japan, 1980 accordingly according to the Figure 1 to manifest the Japan rapidly developed capacity and pace in 1980. In contrast, the USA maintained 450 million ones in 1940 that might indicate last from 1940 to 1970 by USA vehicle makers, meantime, the increasing rate attained 2.45 times between them.

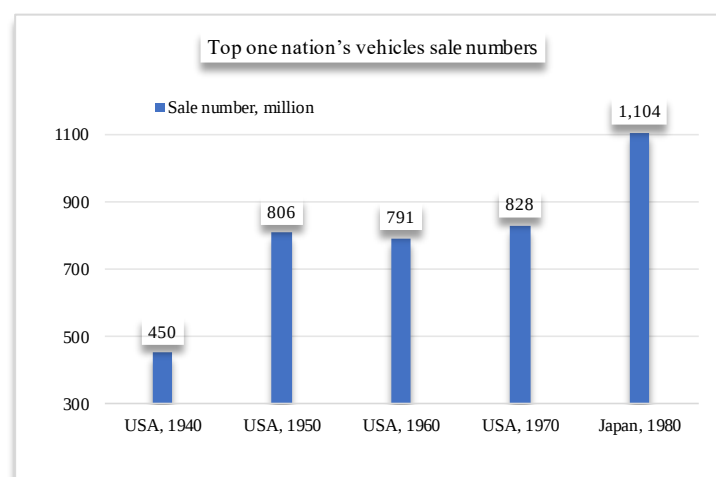

Figure 1 The top nation vehicles sale amount analysis. [1]

2.2 Top nations GDP status

The nations GDP analysis showed 14.5 trillion dollars~2.2 trillion dollars by USA~Britain accordingly in 2007 in light of Figure 2 manifested the former USA strongest economic trajectory. Meantime, the y-o-y growth value might attain 2.8%~4.7% by them correspondingly evidenced the China with 13% exceeding others most forwards developed pace.

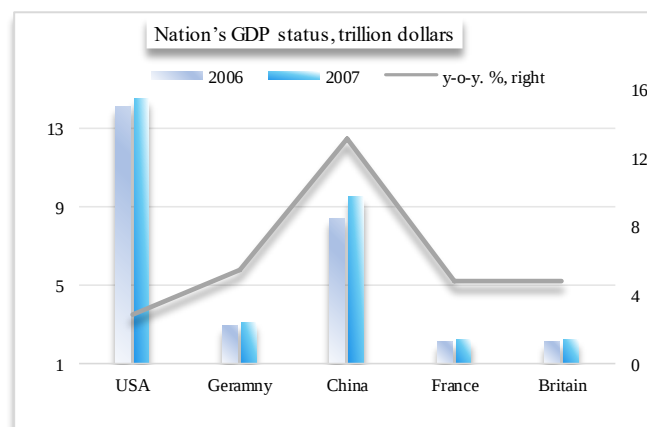

Figure 2 The nations GDP analysis. [2]

2.3 Introduction to open access Journal of economic research I

The aim and scope of the open access Journal of economic research stands at the forefront of scholarly inquiry, driven by a profound commitment to advancing economic knowledge and shaping the discourse surrounding the global economic landscape. Our aim is multifaceted, encapsulating the following key principles as one aspect of the pioneering research excellence which includes in following. We are dedicated to the pursuit of research excellence that transcends disciplinary boundaries. The journal serves as a catalyst for groundbreaking studies, both theoretical and empirical, that contribute significantly to the theoretical foundations and practical applications of economic thought. [3] Therein, we are pleased to invite your submission to us for the sake of contributing to each other, we are to publish your valuable one immediately after passing the peer-reviews course by exports.

2.4 Subject for open access Journal of economic research II

The facilitating cross-disciplinary dialogue includes in Recognizing that economic phenomena often intersect with other fields, the journal encourages cross-disciplinary dialogue. We welcome submissions that explore the intersections of economics with fields such as sociology, political science, psychology, and environmental studies, fostering a holistic understanding of complex societal challenges. On the other hand, the bridging the gap between theory and practice involves in beyond theoretical exploration, our scope extends to research that bridges the gap between economic theory and real-world applications. We value studies that offer practical insights and policy recommendations, facilitating a meaningful impact on economic decision-making at local, national, and global levels. At last the fields of interest might include in the open access journal of economic research invites submissions in the following fields of interest as below. Macroeconomics, Microeconomics, Financial Markets, Economic Policy, Behavioral Economics, International Economics, Development Economics, Econometrics, Sociology and Economics, Political Economy, Environmental Economics. In summary, the aim and scope of the open access journal of economic research encapsulate a commitment to research excellence, intellectual diversity, global relevance, mentorship of emerging scholars, cross-disciplinary dialogue, and the practical application of economic insights within the specified fields of interest. We invite scholars, researchers, and practitioners to contribute to this dynamic intellectual journey, shaping the future of economic understanding. [3] Thereby, we are delighted to invite your submission to us contributing to each sides, we are about to publish your valuable one immediately after passing the peer-reviews course by some exports.

3. Conclusions

The vehicle as an important device for transiting to another remoter distance has occupied a significant position in secondary industry that is to involve in the GDP value and y-o-y growth value for a heavy rate for us to sustainably make and searching. As the modern time come out, the more advanced technique is to be included there such as autonomous-driving-system which may drive with more secure one if the driver drinks wine. That system is about to avoid the risky vehicle and walking man with the help of Beidou navigation-satellite that may instruct the vehicle automatically drive from the start one to destination securely and precisely. Beidou one would be applied in Baidu map for our walking and driving to use easily and simple that may help us overwhelm the missing directions. The more developed application must be searched by our engineers and experts to be cheaper than ever due to spending much money to assemble those security appliance in our motor. So that the low cost & high-efficiency may be priority for our drivers who disseminates in all over the world to complete all of tasks for example the transferring the human and goods to a certain destinations knowing how to get those unfamiliar city and towns. Therefore, the complicated application needs to be simplified more simply software accounted for the rapid and precise course to complete their enterprises easily and helpfully. The current new-energy-vehicle can go abroad to sell with localization tendency where we need to set factory to produce those new ones in order to decline the transitive fee largely. Therein, more and more vehicles made in China transforming to made in USA etc widely sell Chinese brand in those localized area for much convenience. On the other hand, the product with high-technique also recruits the local staffs to continuously produce Chinese brand vehicles, which might be really comfortable and the transportation-fee-free in the view of the comparing with sea-transit. At the same time, the upgrade speed is to require the scientists and senior engineers to follow the world tendency for improving those new functions after launching the product that may dedicate to the user usefulness on time upon activated searching development by now. Therein, the continually searching for the new functions must keep up with the same periodical found and exploration that also may be published in high-impact-factor journal for causing resonance in related fields with understanding reader and maker scientist & experts. For those underscored content the actual role to its products may be negotiated with university laboratory managers in order to import those new technique to the launch candidate for evaluating its performance indeed. Maybe after several months and years those ones might lie in the automatic-flow-line to become new type to circulate in the public front for us to estimate its

valuable properties. It is to be believed that many robots are to make in maker there will be more ones to enter our actual occasions for us to wield sustainably in future. So that the more related research still needs us to proceed the more wonderfulness in near future overall. There would be more and more expert and scientists can bring our the more and more research-achievement from journal's papers to maker line products ultimately. Maybe there might have more and more theoretical approaching method to resolve how those predictable position and so on is exhibition in the software exploration and following calculation. Those high-level deductive formula will be anticipated in the scientific route to promote more deeper and wider views in resolving not defining problems and exploring unknowing fields proposed by old scientists and hobbies sustainably and eventually.

Article Publication Details

This article is published in the [International Journal of Multidisciplinary Research and Bulletin](#), ISSN 3108-1428 (Online). In Volume 5 Issue 5 (Sep – Oct) 2026.

The journal is published and managed by [IRPG](#).

Acknowledgements

We sincerely thank the editors and the reviewers for their valuable suggestions on this paper.

Funding

This paper was supported by Korean Science & Technology Fund at the granted number 96-0300-11-01-03, under the Specific Basis Research Program.

Data availability

No datasets were generated or analyzed during the current study.

Declarations

Ethics approval and consent to participate

The author(s) declare that it is not applicable.

Consent for publication

The author(s) declare that this is not applicable.
