ABSTRACT

The created product and equipment made by a series of proceeding factories specially the electric vehicle would represent the latest technique where the key one batteries group is too big and heavy that may influence the car rotary-inertia make the car bigger force to drive. Another one will be the battery anti-coldness capacity in north area &winter knowing how cold it is below -20°C. Therefore, the low-temperature-performance may be searched more effortful and innovative for our cold regions driver to drive with non-default as for the battery in vehicle and motorcycles. The replacing charge may be more than 5 thousand yuan to a vehicle so expensive fee adding to a driver and his family. The motorcycle substituted fee may attain 1/10 above mentioned money for one totally. Still the lowering cost and high-efficiency research would be processed for the sake of enhancing quality by our scientist &senior engineers benefited to all of us. On the other side, the emerging high-technique knowledge and practice learned from college and manufacturer will wield its powerful strength in new one updating with new functions. Therein, the constant exhibiting new functions need to succeed and descend its validity within certain ie its longevity and zero-error in the course of usefulness in working occasions. So the essential fixing man is to be needed once there might be mistake happened in working period who can be educated by supplier engineer or manual written by the supplier side. So that independently completed one needs to be advocated and advertised by the maker side for the sake of cultivating more advancement technique in future with strategic planning. As we know that one improvement and updation will experience a difficult one from laboratory to manufacturer research &development department for designing the new one series of functions with strategic planning mind. Thereby, the precious one must be protected

from dealing randomly and even destroy its producing action making know more security tactic policies from government and makers side commonly and mutually.

1. INTRODUCTION

As an eminent high-technique like the vehicle developed status the current electric ones have outstanding role in developed manufacture-technique aspect because it has an important development opportunity like how we promote the key-technique batteries' information why to enhance the compositions with different elements combination upon a certain ratio from earth source and synthesis composition after processing them upon certain heat &cold procedures with many times ones. Moreover, the rapid transition will occupy current main positions to know how to exist in modern society the answer will be positive for long time specially in this transforming time from mechanical to automatic time. Hence, the battery technique will become future essential one for us to produce better performance ones that it may be an eminent anticipating research to process the duality-overlaps functions by our scientist &senior engineers. Subsequently, the special interdisciplinary subject will be created initiating formation to carefully study the cross-disciplinary one from now on. The automatic time is to attain how to deal with its actuality role in resolving the fringe-area like dynamics and controlling one combination that it can solve what to act and how to play a certain fields conception. Thereby, the new subjects describe what degree those innovations play will become a trending one in developed pace. So that there would require all of those relevant scientists and scholars to join to study the new subjects will afford strong force with anticipating many eyes. The more emphasis the talents and teachers learning-cooperation spiritual aspect to push those subjects into higher-level and height in solving the actuality problems met in front of us. Now it is only starting stage, it is also to be believed in future there would more and more scientist and scholars to join them realized their interesting studying and learning with more-practical-technology together for them grasp its relationship among those ones. For the sake of dedicating their wisdom to each sides the more efforts will be pushing those ones forwards sustainably and continuously special in the key aspect using combination and procedure whose effectiveness will be accepted by the evaluation constitution and groups after they published their achievement in famous journal. Definitely, those high-technique with low price from China is going to be prevalent in abroad market whose best benefit is the European market where the big sale tendency will be created upon experts

sentence in Tencent News. Furthermore, there will be some Chinese vehicle factories to set up for the sake of acquiring more profitable to turn-back like BYD in Hungary and SAIC in Spain &XPeng Motors etc. There would be another reason for oversee satisfying that is the good technique in China motors. Moreover, the China one will be upgraded rapidly due to our good technique capacities that makes Chinese vehicle get more welcoming. [1~24]

2. Discussions

The experts will accomplish their judgement in detailing GDP relevant value know how that affects our daily live for citizens like artificial intelligence payment robot that is completing the goods scanning and adding algorithm to be total price for customers to finish their face identification and presses the confirmation button, which is the entire course for one time dealing with. Those convenient payment machines are wielding their role in public occasion for us to share the immediately functional ones specially in occasions when there are many people to pay their capital. Maybe the robot price is somewhat high and often occurs mistake with fatigue chip one, hence the specialized people often go to working area to fix the machine making the cost highness for us to burden. Thereby, the simplified one just an identification-face i-pad with small size is using in city. [25~27]

2.1 Asian &Europe nations GDP status analysis

The Asian &Europe nations GDP status analysis might indicate 431 billion dollars~196 billion dollars by Soviet Union~Germany in Jiangsu province in 1969 accordingly to manifest the Soviet Union strong GDP momentum in terms of Figure 1. Meantime, the y-o-y growth value would indicate around 3% &12% by them correspondingly evidenced the Germany forwards developed pace. In contrast, the Japan remained the top one occupation with 21% there.

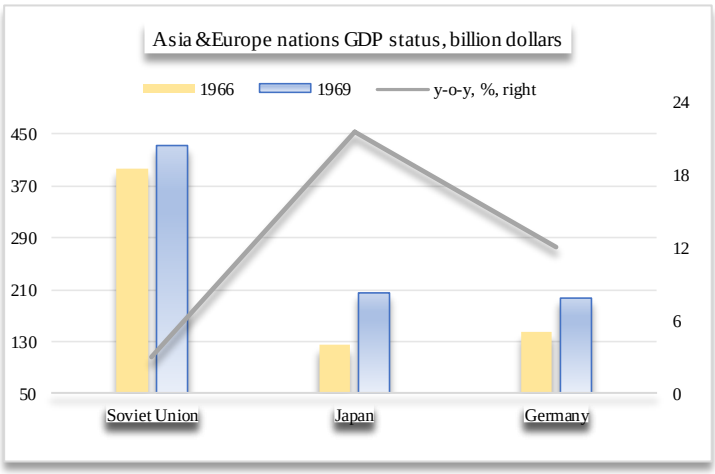

Figure 1 Asian &Europe nations GDP status analysis. [1]

International Journal of Multidisciplinary Research and Bulletin
ISSN 3108-1428 (Online)

2.2 Four nations industrial strength status

Four nations industrial strength variations might indicate 2,230 billion dollars ~525 billion dollars by USA ~China accordingly in 1999 manifested the former USA stronger economic strength than the others in light of Figure 2. The y-o-y value would attain 5.5% &8% by them correspondingly evidenced the latter China upward development pace. In contrast, the Japan might retain 7.7% when the Germany would remain the minus -7.3% lowest development pace.

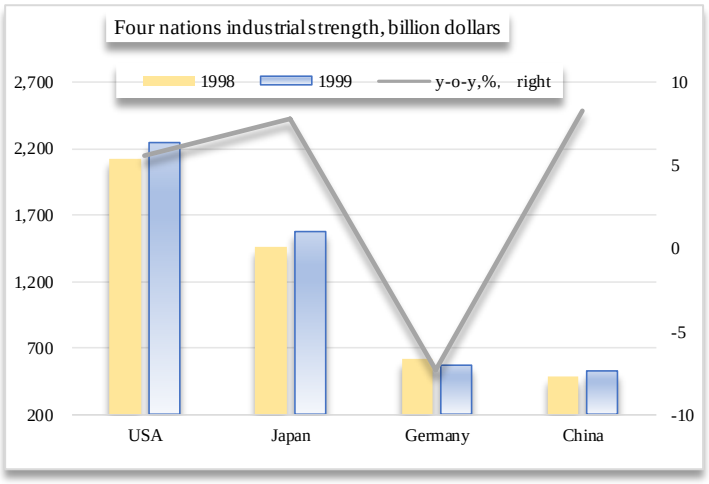

Figure 2 Four nations industrial strength status. [2]

Furthermore, four nations industrial strength variations might indicate 1,800 billion dollars ~299 billion dollars by USA ~China accordingly in 1999 manifested the former USA stronger economic strength than the others in light of Figure 3. The y-o-y value would attain 8% &31.6% by them correspondingly evidenced the latter China forward development pace. In contrast, the Japan might retain 1.789 billion dollars when it would remain the around 8.1% lower development pace.

International Journal of Multidisciplinary Research and Bulletin
ISSN 3108-1428 (Online)

2.3 African nations GDP analysis

The African nations GDP variations might indicate 66 billion dollars &8 billion dollars by Nigeria &Algeria accordingly in 1999 manifested the former Egypt stronger economic strength than the latter Nigeria in light of Figure 4. The y-o-y value would attain -25% &4% by them correspondingly evidenced the Ethiopia development pace.

2.4 The common App's approach increases application

The common App is best known for streamlining the traditional college application process by having students complete one application for all colleges and universities that partner with the platform, additionally any supplemental materials required by the institutions. The common App's direct administration feature uses data the students have added to their profiles, eg. GPA and extends admissions offers to first generation and low and middle-income students. Moreover, a study of the common App's direct admissions program pilot year yield modest results. When it came to the program's impact on college applications, students who received direct admissions offers. [4]

Summarily, the product with advanced technique must be created in light of applying to senior engineers differed from old technique, so many updating ones continuously transiting to factory searched by scientists leading his team to finish one difficult project finally are making sure that new ones to release our front. Those innovative products might be applying to the requirement place only after the test sample is completed and approval by the responsible manager and engineer together to make a specification to deliver to customer side. That symbols one upgraded is to be completing its mission so how to continuously create the more latest ones will meet in

front of us who must choose them from technique database prepared by scientist and engineers together in light of the strategic planning made upon senior scientist.

3. Conclusions

The papers published in high-citation journal will be contribution to inspiring the advancement readers for scientist &senior engineers to seek adoptive content in order to choose those which can make the one to build those waiting for developed another successful destination with inter-methods or multi-ones as an effortful result after the one finishes all the paper. From different papers the entire meaning is adopted for his destination to judge the correct experiment and calculation course evaluated the relevant paper adoption in that field and scope then transit the further course with adding more advancement methods to develop those published ones. Whatever the destination has differed from the original methods the continuously upgraded their research direction is to be possible if he definitely insists on his independently accomplishment. Don't change easily ones mind initially choosing route, then accelerating the speed to complete his initial direction with weaponizing his own aim for the sake of wielding adaptive papers course eventually for ones searching development. So as to update the calculative &Experimental modeling erection the relevant materials must be adopted with varying from different journal's article differently how degree the content is suitable for ones methods from ones exhibition specially from the public &college library. Therefore, the new-quality-productivity needs to foster deeply from current level between new interdisciplinary subjects for the sake of transferring variously knowledge and good experiences whose aim is able to realize the new-energy power and advancement technique derivation from the phenomenon and corresponding explanation modeling types. Many new technique enables to realize their subsequent research task continuously by our scientist and fellows in order to accomplish the transformation burden into reality product eventually. As to finishing the latest study results the engineer &scholars must process the industrial learning and searching &usefulness for subsequent many technological capacity into factory designing department so as to complete the launch ones there. Definitely there would be many difficulties in front of us and it might be realized the successful products are about to exhibit our effortful results certainly.

Article Publication Details
This article is published in the **International Journal of Multidisciplinary Research and Bulletin**, ISSN 3108-1428 (Online). In Volume 5 Issue 5 (Sep – Oct) 2026.
The journal is published and managed by **IRPG**.

Acknowledgements
We sincerely thank the editors and the reviewers for their valuable suggestions on this paper.

Funding
The authors declare that no funding was received for this work.

Data availability
No datasets were generated or analyzed during the current study.

Declarations

Ethics approval and consent to participate
The author(s) declare that it is not applicable.

Consent for publication
The author(s) declare that this is not applicable.

Competing interests
The author(s) declare that they have no competing interests.
