ABSTRACT

Talents who knew not only economics but also techniques will be welcome in future, so that the ones may become cutting-edge-field multidisciplinary ones for the sake of creating those value promotion by now. The social requirement needs urgently those current outstanding human being for satisfying the market known why and how the urgent tendency according to burdening significant charge specially in the aspects of innovating more products in the future continuously. Hence, those human choosing may present the recent national necessary for some big engineering and constructing from university's subjects one who has advancement capacity exhibited in the score sheet. In the view of mediation hierarchical through observing the economy relationship between national economy and business principle they would investigate it. In addition, they realizes big-data analysis and applying to the data dealing scientific technique capacity as well. They will control the future one business in secondary and tertiary industries due to grasping innovation like interdisciplinary department whose role is to resolve some emerging one's dynamic analysis. On the other side, the GDP value determines the potential talents can wield their effectiveness in modern society so as to promote new conceptional practical capacity ultimately. Since there would be huge development chance that it may improve the one and subsequently surrounding regions economic development issue mutually in light of comparing with each other among them. The key problem is to be innovative evolution through observing the principle concept in history and future participation preparation in front of our route proceeding. Hence, there might be more high-technique-product whose meaning is beyond the single dealing become the entire GDP behavior with high technique capacity. Little by little, the concept inside our mind will be emerging from primary industry to tertiary one specially the advancement equipment one and service industry

how they exert their huge potential power to our current GDP value eventually. Only if the high-advancement-one is to be created through our engineers and experts with artificial intelligent know-how and ability the forwards moving behavior and judgement can be realized from gradual to accelerated stages.

1. INTRODUCTION

The health for us will become an urgent task in front of us continuously due to the contamination atmosphere made by automobile and factories that the traditional energy will meet the transforming turn-point. Hence, the public sanitation may occupy our life health one big problem, thereby the carbon exploitation is about to be decreased in motors so the renewable energy must be used by those automobiles replacing current traditional one. The more exploiting carbon energy the more disease is produced by them whose harmful effectiveness can be found so that it causes a lots of disasters like COVID(corona virus disease)-2019 epidemic ones, so that in the view of protecting environmental quality may dominate a significant influence to our human-being survivals. On the other side, the high-level academy activities must be processed from now on and immediately accounting for the situation with increasing the whole world GDP indicator specially those backward nations and regions that they need to adopt the local and advanced nations new one in order to raise their three industries from primary to tertiary one. We should look at the mediate side to act and make a strategic planning and allocation with tactic one, hence the more markets and purchase orders to realize the social modernization and civilization that may make us to live better preventing from the sanitation and healthy aspects.

On the other hand, the scholars are going to proceed their research activities taken into account what the frontier field in Physics Medicine &Chemistry continuously searches so as to ascend the whole country basis science &technology largely. Many research item would be allocated from government National Natural Science Funds(NNSF), Provincial Fund for the sake of promoting national and provincial scientific projects that would provide more searchable items with capital for our scientist and professors to be doing. That one may be a national important research planning, hence the effectiveness power will occupy significance meanings anticipating to a certain progression with relevant theme and activity. Thereby, all of them with a combination team may process the relative work from experimental exploration on those magazine and academic report etc many aspects to composition alignment with wielding their actual capacity

whether or not they can solve the key problems in defining one item. Many research achievement may publish in famous journals so as to get positive reputation and more projects sustainably from proceeding one route to several ones with evident performance to evaluate what degree the paper represents the actual problem. [1~23]

2. Discussions

The personal development for high-hierarchical will include in the competition force facing to the anticipated industry in future. Hence, the continuously effortful to those high-advancement machine with automatic even artificial intelligent robot to realize high-end-product design and making skill through exerting our engineer and expert &scientists endeavor constantly. Thereby, those making ones transforms from machine to capital in order to improve our actual behavior in terms of raising GDP and its growth value organically and harmoniously. So that the competition force how to attain the world level might be helpful to gain the advancement service by more than two~five ten thousand USD through those high-technique product producing and investment in light of our experts advice in various fields.

[24~25]

2.1 Nations industrial added value status

The Nations industrial added value status would show 2.8 trillion dollars &2.6 trillion dollars by EU &USA accordingly in 2004 in terms of Figure 1 to evidence the former EU strong industrial capacity. The y-o-y growth value might indicate around 4% by both of them manifested their normal development pace. Therein, the nations industrial added value as evaluating the created value in each joint in the industrial producing course will be balancing one national and regional industrial producing capacity and economic development level that may be an important indicator. [1]

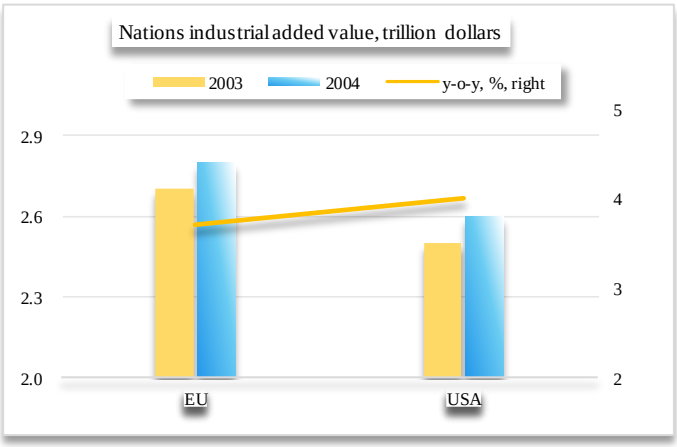

Figure 1 Nations industrial added value status. [2]

Moreover, the Nations industrial added value status would show 0.97 trillion dollars &0.16 trillion dollars by China &Brazil accordingly in 2004 in terms of Figure 2 to evidence the former China strong industrial capacity. The y-o-y growth value might indicate 10% &12% by them manifested their higher development pace.

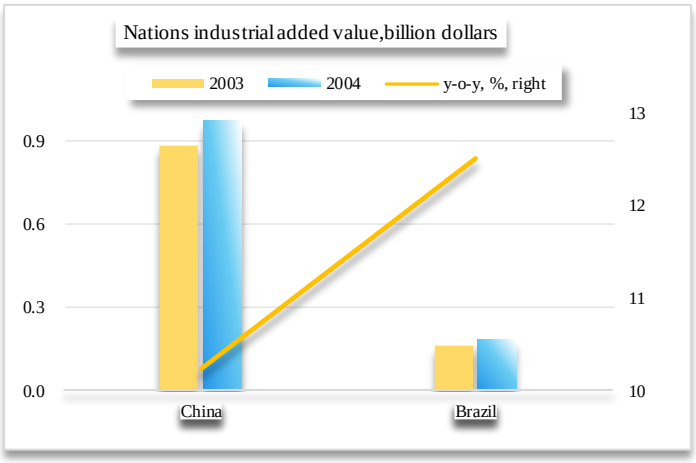

Figure 2 Nations industrial added value status I. [2]

At last the Nations industrial added value status would show around 2 trillion dollars by EU &USA in 1998 in terms of Figure 3 to indicate their strong industrial capacity. The y-o-y growth value might indicate around 0 &5% by both of them manifested the USA normal development pace.

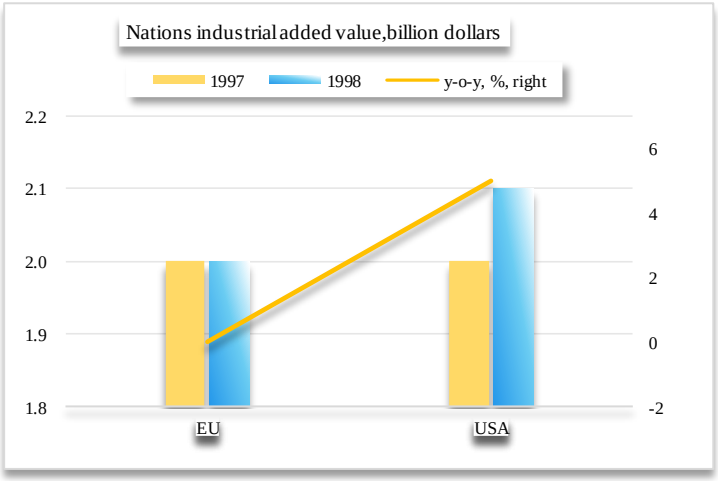

Figure 3 Nations industrial added value status II. [2]

2.2 Tiger Cub Economies GDP status

The Tiger Cub Economies GDP status would show 10 billion dollars &2.6 billion dollars by Malaysia &Jiangsu province accordingly in 1975 in terms of Figure 4 to evidence the former

strong industrial capacity. The y-o-y growth value might indicate around 5% &4% by them manifested their normal development pace.

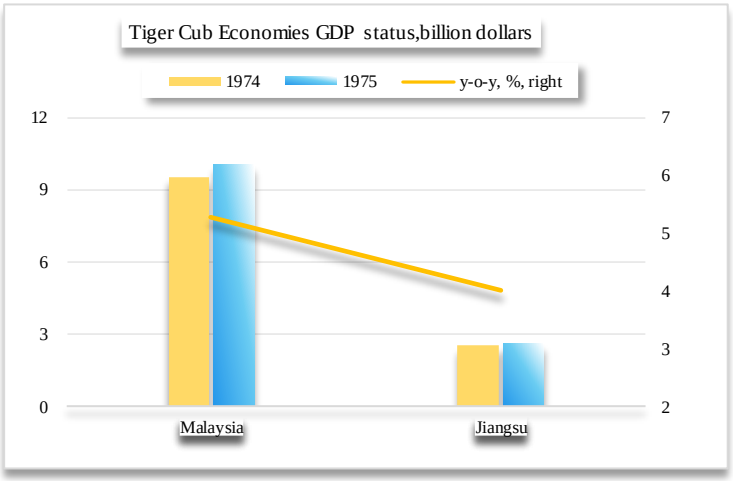

Figure 4 Tiger Cub Economies GDP status. [3]

2.2 Subject for the International Journal of Multidisciplinary Research and Bulletin (IJMRB)

Its aims & scope will be as following that the IJMRB welcomes original research articles, review papers, case studies, short communications, technical notes, conceptual papers, and scholarly commentaries from all disciplines and subject areas, including but not limited to the journal publishes manuscripts in, but is not limited to, the following areas like Chemistry and Chemical Sciences, Computer Science, Artificial Intelligence, Data Science, and Cyber Security, Earth and Environmental Sciences, Economics and Finance, Education and Educational Technology, Engineering and Technology (All Branches), Energy and Renewable Energy, Environmental Studies and Sustainability, Food Science and Nutrition, Geography and Geosciences, Health Sciences, Information Technology and Information Systems, Law and Legal Studies, Library and Information Science, Linguistics and Literature, Mathematics and Statistics, Medical and Clinical Sciences, Nursing and Allied Health Sciences, Pharmacy and Pharmaceutical Sciences, Physical Sciences (Physics), Political Science and International Relations, Psychology and Behavioral Sciences, Public Administration and Public Policy, Social Sciences, Sociology and Anthropology, Sports Science and Physical Education, Tourism and Hospitality Management, Veterinary Sciences. Therefore, the IJMRB encourages the submission of high-quality manuscripts from all subject areas and disciplines that contribute to scientific advancement, practical innovation, policy development, and societal well-being. The journal particularly welcomes interdisciplinary studies that bridge traditional academic boundaries and foster

collaboration across diverse fields of knowledge. [2] So that we are pleased to invite your submission to us for dedicating to each sides commonly, we will publish your valuable paper in time after passing through peer-reviews course by our experts.

In summary, training talents specially those scientists will control the future economic competitive winner absolutely known how those educational course and subsequently proceeding subjects and periodicity gap etc. a series of processes. At the same time, those multidisciplinary ones may acquire breakthrough achievement could bring us out more learning weapons to process the promise industry under considering both of enterprise and government institution for them to propose details plan and subsequent using policy so as to allocate privilege's fostering capital with trial producing in their factory. Those economy behavior will help them to operate with financial one, information system how the details tactics may play an effective role to those emerging industries at all.

3. Conclusions

The papers published in high-citation journal will be contribution to inspiring the advancement readers for scientist &senior engineers to seek adoptive content in order to choose those which can make the one to build those waiting for developed another successful destination with inter-methods or multi-ones as an effortful result after the one finishes all the paper. From different papers the entire meaning is adopted for his destination to judge the correct experiment and calculation course evaluated the relevant paper adoption in that field and scope then transit the further course with adding more advancement methods to develop those published ones. Whatever the destination has differed from the original methods the continuously upgraded their research direction is to be possible if he definitely insists on his independently accomplishment. Don't change easily ones mind initially choosing route, then accelerating the speed to complete his initial direction with weaponizing his own aim for the sake of wielding adaptive papers course eventually for ones searching development. So as to update the calculative &Experimental modeling erection the relevant materials must be adopted with varying from different journal's article differently how degree the content is suitable for ones methods from ones exhibition specially from the public &college library. Therefore, the new-quality-productivity needs to foster deeply from current level between new interdisciplinary subjects for the sake of transferring variously knowledge and good experiences whose aim is able to realize the new-energy power and advancement technique derivation from the phenomenon and corresponding explanation modeling types. Many new technique enables to realize their subsequent research

task continuously by our scientist and fellows in order to accomplish the transformation burden into reality product eventually. As to finishing the latest study results the engineer &scholars must process the industrial learning and searching &usefulness for subsequent many technological capacity into factory designing department so as to complete the launch ones there. Definitely there would be many difficulties in front of us and it might be realized that the successful products are about to exhibit our effortful results certainly.

Article Publication Details
This article is published in the **International Journal of Multidisciplinary Research and Bulletin**, ISSN 3108-1428 (Online). In Volume 5 Issue 5 (Sep – Oct) 2026.
The journal is published and managed by **IRPG**.

Acknowledgements
We sincerely thank the editors and the reviewers for their valuable suggestions on this paper.

Funding
This paper was supported by Korean Science &Engineering Fund(KSEF) at the granted No 96-0300-11-01-03, under Specific Basis Research Program.

Data availability
No datasets were generated or analyzed during the current study.

Declarations

Ethics approval and consent to participate
The author(s) declare that it is not applicable.

Consent for publication
The author(s) declare that this is not applicable.

Competing interests
The author(s) declare that they have no competing interests.
