## ABSTRACT

A good company will enhance the recruitment rate in seeking human resource market where the good educational study and experience is welcome due to carefully studying &effortful out-come in better departments like computer science &technology auto-controlling one electronic engineering etc. advanced ones. So that he might be prevalent in human resource and its company that could be good one as well. So the more advanced subjects it is the better companies would recruit him for contributing to each side mutually. Therein, the better innovation research and development might be gained from the bilateral requirements that they are flexible working to do there. In the view of creating new innovative improvement for making product procedures and low cost substances the new and evolutionary will produce sustainably know how to change the difference between various products like automatic chip evolved into artificial intelligence. Those huge evolution may exhibit the designing and process besides composition capabilities from the up-stream factory to middle and down ones cooperatively and through acquisition. On the other hand, those many high-technique factory may produce the advancement ones continuously to ensure that their products have little default from automatic-flow-line to quality inspection. As knowing by us the products' quality will occupy an important role in user usefulness course who knew the how degree the product can present good performance and longevity additionally. We in factory must know the basic wrong to happen usually in final customer usefulness where the new one can be created like if the function becomes quality badness &another more advancement one that is needed, eg. That the wash machine adds dry all of the washed clothes can be better for using course and now the corresponding drying function will be prevalent in department store besides paying a little

money. Therefore, the GDP(gross domestic product) relevant may be improved by our effortful price by all of scientists and engineers and more hobbies whose roles will dedicate to the whole economic development joint. The more quality and longevity ones must be created by the factory continuously for satisfying our more urgent requirement derived from the final customers.

## 1. INTRODUCTION

The future factory will produce new innovative ones through the auto-flow-line with scale producing their key ones sustainably so that the product cost may decline continuously by upgrading the existing ones. Therein, the new idea from each side can construct the more advanced ones according to exerting “Zhixing Heyi” in China that means the knowledge will become behavior. So the senior engineer and some talents can be recruited from inner &others-resource for guaranteeing the existent product kinetic energy adding with upgrading the existence ultimately. As we knew the more advanced product we owned the more profitable we can get, hence the insistence in continuously developing new one become the vital factor for us to receive success and failure result that may expedite our research pace more stabilized and reliable in the end.

On the other side, the low cost and high-technique ones may be created continuously that means the scale producing in factories zone is to be produced with advancement technology eg. Chip, CPU(central processing unit), GPU(graphics processing unit) &new materials. Those having high-tech skilled products could promote its valid longevity and updated continually with its automatic performance so as to realize high-end requirement in modern society. For example, the computer science &technology owned its rapid CPU and RAM(random access memory) would become a sharp weapon to revolve the multifunctional demand like video, audio &calculation capacity besides the strong Internet searching one. We may exert its strong calculation characteristics to solve many statistics application like salary alignment, making charts with column graph, line, disc etc. many types function. Thereby, those GDP value per year may be derived from the high-tech corporations mentioned above to exhibit their innovation technological application to the corresponding places definitely and absolutely. No matter how it is difficult we make sure that the conquering it like a mysterious mathematical one with sustainability and continuity. The more scientists need to be done those sophisticated challenges

exhibited in mathematics, physics, chemistry &computer technology with contribution spirits. [1~30]

## 2. Discussions

### 2.1 Top 8~15 semiconductor companies' revenue

The top 8~15 semi-conductor companies' revenue might show 2.3 billion dollars~7.7 billion dollars by Kioxia~AMD accordingly in Q3 2024 to evidence the AMD strong revenue value in light of Figure 1.

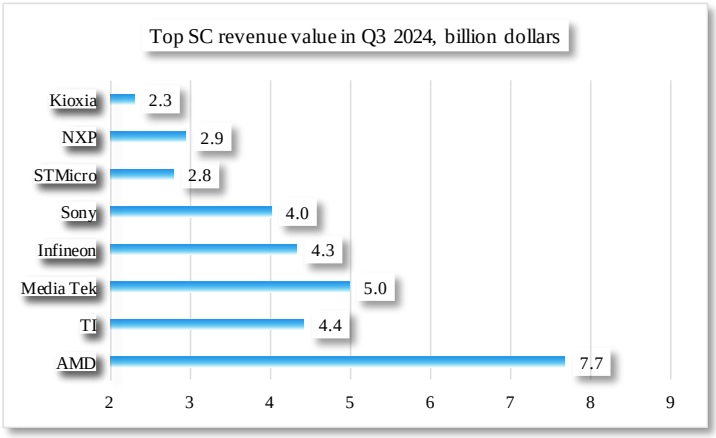

Figure 1 Top 8~15 semiconductor companies' revenue. [1]

### 2.2 Subject for International Journal of Engineering Research and Applications

As to the researcher, it is ISO 3297:2007 certified open access and peer reviewed refereed international Journal. The IJERA invites articles that illustrate research results, projects, surveying works and industrial experiences that describe significant advances in the areas of Engineering, Technology, Science and Mathematics. Thereby, we are pleased to invite your submission to us dedicated to both our sides, we are going to publish your valuable one in time and with cheapness. [2]

### 2.4 Introduction to the American Journal of Engineering Research

We are an open access scholarly, online, peer-reviewed, interdisciplinary, and fully refereed journal to call for submit your research paper. As for authors, we are pleased to notify you that AJER Publication is going to launch its next issue. We would like to invite you to contribute your research paper for publication. The papers published in AJER Journal will receive very high publicity and acquire a very high reputation. The journal covers all areas of engineering & technology and many more for details visit at (www.ajer.org). We publish original research articles, review articles and technical notes. The journal reviews papers within a week of submission and publishes accepted articles on the internet immediately upon receiving the final

versions. Our fast review process is our strength. Authors are requested to prepare their manuscript in a given template at AJER Publication. [3] Therefore, we are delighted to invite your submission to us for the sake of dedicated to each sides. Then we are about to publish your valuable one with quickness and cheapness after passing peer-reviews course by experts.

**2.5 China &Japan GDP strength**

The China &Japan GDP strength comparison might indicate 8.7 hundred billion dollars~3.2 hundred billion ones by Tokyo~Aichi county accordingly in 2006 in terms of Figure 2 illustrated the former Tokyo city strengthening economic momentum. The y-o-y growth value could exhibit 0~0.9% by correspondingly to illustrate the Guangdong province highest developed pace with 17%.

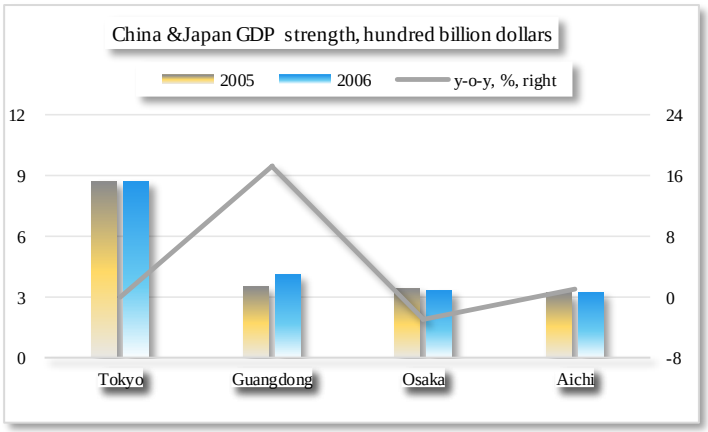

Figure 2 The China &Japan GDP strength comparison. [4]

Moreover, the China &Japan GDP strength comparison might indicate 3.3 hundred billion dollars~1.8 hundred billion ones by Jiangsu~Saitama county accordingly in 2006 in terms of Figure 3 illustrated the former Zhejiang province strengthening economic momentum. The y-o-y growth value could exhibit 14%~-1% by correspondingly to illustrate the Zhejiang province highest developed pace with 14%.

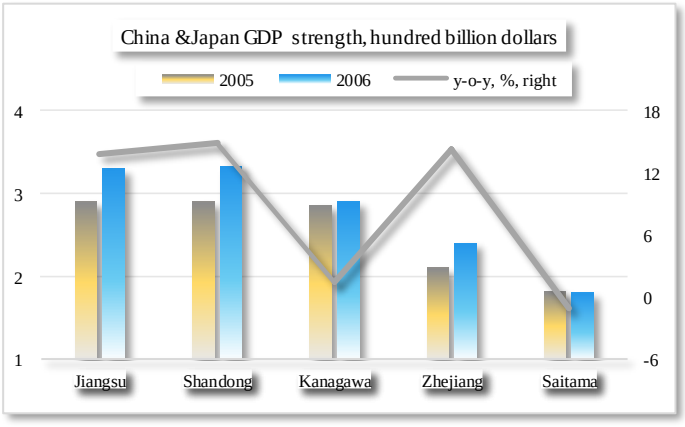

Figure 3 The China &Japan GDP strength comparison I. [4]

In short, the experts will accomplish their judgement in detailing GDP relevant value know how that affects our daily live for citizens like artificial intelligence payment robot that is completing the goods scanning and adding algorithm to be total price for customers to finish their face identification and presses the confirmation button, which is the entire course for one time dealing with. Those convenient payment machines are wielding their role in public occasion for us to share the immediately functional ones specially in occasions when there are many people to pay their capital. Maybe the robot price is somewhat high and often occurs mistake with fatigue chip one, hence the specialized people often go to working area to fix the machine making the cost highness for us to burden. Thereby, the simplified one just an identification-face i-pad with small size is using in city.

**3. Conclusions**

In the financial stocks market the main focus will be on those proof-declination and having accumulative ones that was key-one indicator. If you have weak-power one you should regulate it so as to eliminate possible damage.Therefore, the strong stocks will provide the more security and certain-profits than those brisk and weak one where the portfolio combination investment become a good one due to its decreasing risk behaviors. So in the secondary industry the advantageously exerting the brand profile's vehicle business could become a trending for us to participate to buy prevalent behavior. In the maker factory the updated new type brands might be welcome by our customer due to its having basis power supporting. When the vehicle has wrong to happen the timely fixing is to be processed for us to be convenient and cheap price. On the other side, if the serving time and miles attains the semi-failure degree the one may be bought with a certain price with discount for us to chase continuously. So that the automobile brand is to be fostered sustainably by senior engineers in factory for contributing to the high-creditable-evaluation commodity to be pushed constantly besides the high-quality-reputation by those famous factories. Thereby, those old and waiting for transforming customers would process their selling behavior and judgement to fix station and second-dealing store to get the corresponding service simply and conveniently. The encouraging the high-GDP-region will underscore their entities and prestige in the newest GDP ranking list from late three years to predicting next three ones known how they occupy the leading ones and why they got the good ones that will afford the why and how relationship among them for us to estimate their cause and planning. At the same time, the recruitment main power is flowing into the big city more and more due to its high-

economic-level for those worker in architecture business and real estate one continually from rural area to center city. So that the corresponding policy must be planned and aligned in light of estimating their real live conditions and qualities for the sake of improving their later the immigrating resident tendency to be attractive welfare and bonus.

**Article Publication Details**
This article is published in the **International Journal of Multidisciplinary Research and Bulletin**, ISSN 3108-1428 (Online). In Volume 5 Issue 5 (Sep – Oct) 2026.
The journal is published and managed by **IRPG**.

**Acknowledgements**
We sincerely thank the editors and the reviewers for their valuable suggestions on this paper.

**Funding**
This paper was supported by Korean Science &Engineering Fund(KSEF) at the granted No 96-0300-11-01-03, under Specific Basis Research Program.

**Data availability**
No datasets were generated or analyzed during the current study.

**Declarations**
**Ethics approval and consent to participate**
The author(s) declare that it is not applicable.

**Consent for publication**
The author(s) declare that this is not applicable.

**Competing interests**
The author(s) declare that they have no competing interests.
