ABSTRACT

A good company will enhance the recruitment rate in seeking human resource market where the good educational study and experience is welcome due to carefully studying &effortful out-come in better departments like computer science &technology auto-controlling one electronic engineering etc. advanced ones. So that he might be prevalent in human resource and its company that could be good one as well. So the more advanced subjects it is the better companies would recruit him for contributing to each side mutually. Therein, the better innovation research and development might be gained from the bilateral requirements that they are flexible working to do there. In the view of creating new innovative improvement for making product procedures and low cost substances the new and evolutionary will produce sustainably know how to change the difference between various products like automatic chip evolved into artificial intelligence. Those huge evolution may exhibit the designing and process besides composition capabilities from the up-stream factory to middle and down ones cooperatively and through acquisition. On the other hand, those many high-technique factory may produce the advancement ones continuously to ensure that their products have little default from automatic-flow-line to quality inspection. As knowing by us the products' quality will occupy an important role in user usefulness course who knew the how degree the product can present good performance and longevity additionally. We in factory must know the basic wrong to happen usually in final customer usefulness where the new one can be created like if the function becomes quality badness &another more advancement one that is needed, eg. That the wash machine adds dry all of the washed clothes can be better for using course and now the corresponding drying function will be prevalent in department store besides paying a little money. Therefore, the GDP(gross domestic product) relevant may be

improved by our effortful price by all of scientists and engineers and more hobbies whose roles will dedicate to the whole economic development joint. The more quality and longevity ones must be created by the factory continuously for satisfying our more urgent requirement derived from the final customers.

1. INTRODUCTION

The future factory will produce new innovative ones through the auto-flow-line with scale producing their key ones sustainably so that the product cost may decline continuously by upgrading the existing ones. Therein, the new idea from each side can construct the more advanced ones according to exerting “Zhixing Heyi” in China that means the knowledge will become behavior. So the senior engineer and some talents can be recruited from inner &others-resource for guaranteeing the existent product kinetic energy adding with upgrading the existence ultimately. As we knew the more advanced product we owned the more profitable we can get, hence the insistence in continuously developing new one become the vital factor for us to receive success and failure result that may expedite our research pace more stabilized and reliable in the end.

On the other side, the low cost and high-technique ones may be created continuously that means the scale producing in factories zone is to be produced with advancement technology eg. Chip, CPU(central processing unit), GPU(graphics processing unit) &new materials. Those having high-tech skilled products could promote its valid longevity and updated continually with its automatic performance so as to realize high-end requirement in modern society. For example, the computer science &technology owned its rapid CPU and RAM(random access memory) would become a sharp weapon to revolve the multifunctional demand like video, audio &calculation capacity besides the strong Internet searching one. We may exert its strong calculation characteristics to solve many statistics application like salary alignment, making charts with column graph, line, disc etc. many types function. Thereby, those GDP value per year may be derived from the high-tech corporations mentioned above to exhibit their innovation technological application to the corresponding places definitely and absolutely. No matter how it is difficult we make sure that the conquering it like a mysterious mathematical one with sustainability and continuity. The more scientists need to be done those sophisticated challenges exhibited in mathematics, physics, chemistry &computer technology with contribution spirits. [1~30]

2. Discussions

2.1 China &Macao GDP strength analysis

The China &Macao GDP strength comparison might indicate 7.3 billion dollars~1.3 billion ones by Jiangmen~Zhuhai city accordingly in 1986 in terms of Figure 1 illustrated the former Jiangmen city strengthening economic momentum. The y-o-y growth value could exhibit 19.6%~35% by correspondingly to illustrate the Zhuhai city highest developed pace with 35%.

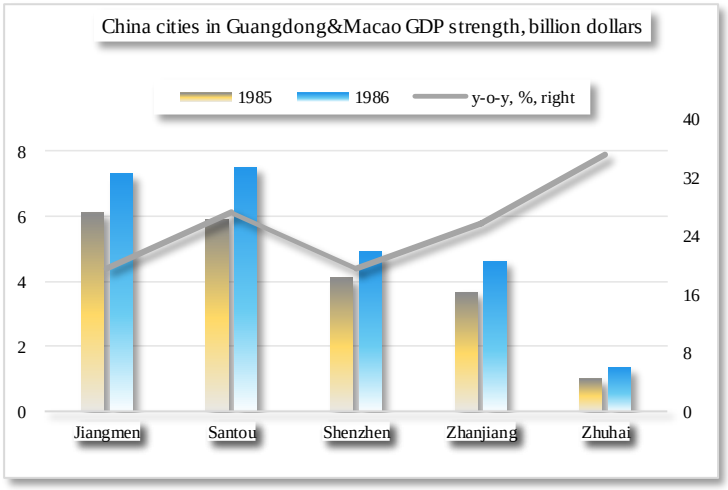

Figure 1 China &Macao GDP strength analysis. [1]

Moreover, the China &Macao GDP strength comparison might indicate 15.5 billion dollars~8 billion ones by Guangzhou~Huiyang city accordingly in 1986 in terms of Figure 2 illustrated the former Guangzhou city strengthening economic momentum. The y-o-y growth value could exhibit 19%~25% by correspondingly to illustrate the Macao city highest developed pace with 35% as well.

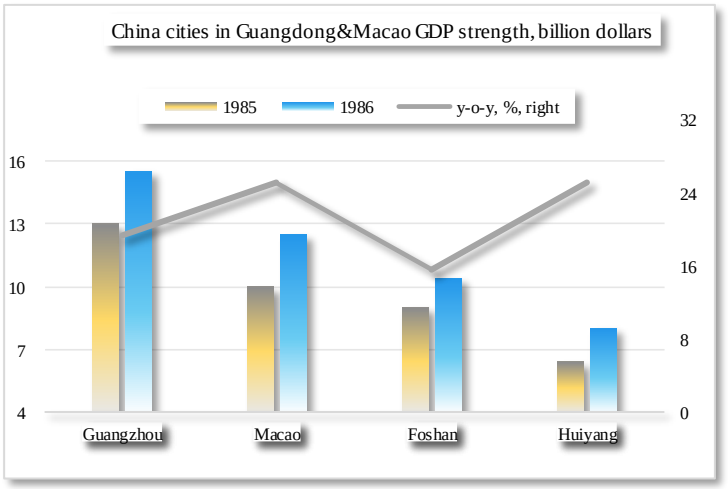

Figure 2 China &Macao GDP strength analysis I. [1]

The China &Macao GDP strength comparison might indicate 35 billion dollars~14 billion ones by Guangzhou~Foshan city accordingly in 1990 in terms of Figure 3 illustrated the former Guangzhou city strengthening economic momentum. The y-o-y growth value could exhibit 14%~21% by correspondingly to illustrate the Foshan city highest developed pace.

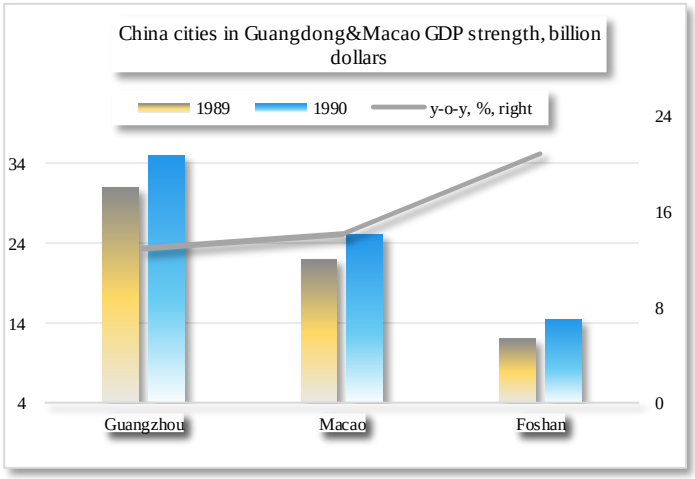

Figure 3 China &Macao GDP strength analysis II. [1]

At last, the China &Macao GDP strength comparison might indicate 11 billion dollars~20 billion ones by Jiangmen~Shenzhen city accordingly in 1990 in terms of Figure 4 illustrated the Shenzhen city strengthening economic momentum. The y-o-y growth value could exhibit 13.4%~12.8% by correspondingly to illustrate the Shenzhen city highest developed pace with 29%.

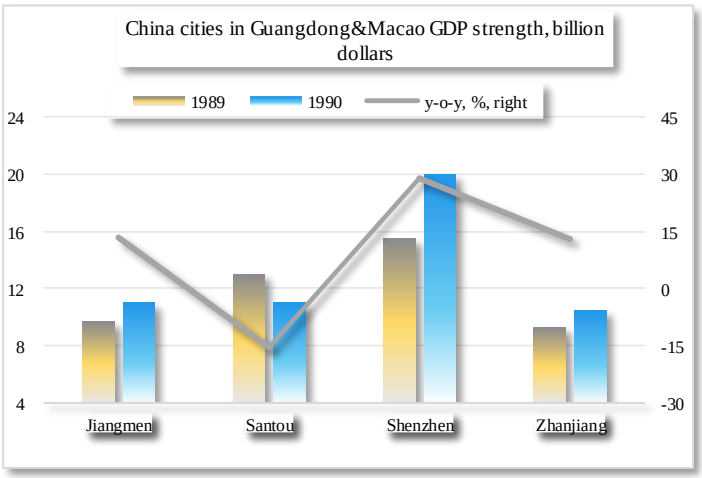

Figure 4 China &Macao GDP strength analysis III. [1]

3. Conclusions

The Chinese Guangdong GDP attained 14.58 trillion yuan ie. 2.17 trillion dollars that it occupied the whole country economy amount beyond 1/10 and continued 37 years to become No one in

China. The value may indicate the No 11 with viewing in the global economy. The plenty of commercial &trade will become an important catalyst happened in the developed chance where it forms uniquely entire country's economy entity and heavy family basis. In the view of time chance there will be much effectiveness to the country and world melting influence let us know how the experience and features can determine the local regional economic big development. Small to one city and big to one nation the commercial and trade potential power will be huge for us to push the GDP value forwards developed dynamic and mild soft. The every region and country must be aware that the traditional and modern constructs the innovation force for us to learn and proceed in actuality economy behavior and judgement upon the specialist and scientists even general man. So those men's judgment in corresponding constitutions can become innovative courage and confidence for getting more destinations to follow ultimately. As for one city, the fist thing can be the characteristics in regions must be studied detailing to know what degree the one has from the commerce to trade and manufacturer with plenty of supply-chains and industrial chain &human resource chain, then look forward to participating some privileges industry according to the strategic planning made by governmental institution. Like the mentioned above Guangdong province it grasps the potential force and economic chance combination from several decades ago so that the top one leadership may be dominated by them up to now due to owning its geographical advantages and privilege and adding the foreign trade with the exportation and importation is to create Guangdong province perspective future. In addition, Guangdong not only has service business but also owned secondary business that maybe form the dual-edges-knifes which can exert its right from the two types of business and save business navigation special in the ship-transit-course.

Article Publication Details
This article is published in the **International Journal of Multidisciplinary Research and Bulletin**, ISSN 3108-1428 (Online). In Volume 5 Issue 5 (Sep – Oct) 2026.
The journal is published and managed by **IRPG**.

Acknowledgements
We sincerely thank the editors and the reviewers for their valuable suggestions on this paper.

Funding
The authors declare that no funding was received for this work.

Data availability
No datasets were generated or analyzed during the current study.

Declarations
Ethics approval and consent to participate
The author(s) declare that it is not applicable.

Consent for publication
The author(s) declare that this is not applicable.

Competing interests
The author(s) declare that they have no competing interests.
