ABSTRACT

The scientist as an important human recourse may wield their innovation measures to solve all of the problems met in front of us, therein they would promote development course largely how to apply to actuality when there would be difficult for us to resolve in predictive mathematical result and course. So that the subsequent a series of research and producing ability and kinetic energy might be transformed into the clearer environment and conditions where the continuous effort needs to be proceeded in the competition society among developed and developing nation and regions occupied the commend-height point early and urgently for the sake of grasping advantageously that highness point in advance. Hence, the more sophisticated course for us to induce from the original data to prove the actual technique problems will be urgent task that may cause the predictive results like in an experimental course the coincided relationship with theoretical deduction so the more and unknown situation can publish in the view of regulating our senior engineer and scientist etc. At the same time, as to those difficult and predictable theory and principles would change the entire technological advancement and transformable property, hence the courageous award and human regulation for charging senior one must be kept up with dedicated to the more cutting-edge-field exploration and more finding. They must lie in the world technique sharpness in order to continuously promote their deepening mathematical simulation deducted from the new methods eg. latest interdisciplinary subjects that it can create variously views according to the actuality starting-point. Moreover, the formula that is to be simplified will play an ultimate destination for us to use within some defining condition because the same results need to be output from various formula that is to be regarded as the correct one for which the same results prove

the correct with zero deviation applied to different methods. On the other hand, the national economic main batter-field would include in GDP value &growth value that may have an influential power according to evaluating current economy situation between various nations and regions where the high &rapid development is to be wanted now. Thereby, the high-technological product have occupied the significant demands so as to increase the GDP value through high-efficiency and low-cost ones produced by makers how we are to align different technology and key investment in some regions in light of evaluating the part situations. That might afford us much upgraded business and makers for the sake of innovation created producing like debuting low-cost and high-profit ones in market included domestic &overseeing one. Meanwhile, the investment capital into those high-tech maker will become innovation strategic-planning through stocks market dealing like ETF(exchange traded fund), futures security where the certain profit might be formed through managing strategic &tactic methods commonly. To be prudently joining the investment behavior to protect us from more risks.

1. INTRODUCTION

The health for us will become an urgent task in front of us continuously due to the contamination atmosphere made by automobile and factories that the traditional energy will meet the transforming turn-point. Hence, the public sanitation may occupy our life health one big problem, thereby the carbon exploitation is about to be decreased in motors so the renewable energy must be used by those automobiles replacing current traditional one. The more exploiting carbon energy the more disease is produced by them whose harmful effectiveness can be found so that it causes a lots of disasters like COVID(corona virus disease)-2019 epidemic ones, so that in the view of protecting environmental quality may dominate a significant influence to our human-being survivals. On the other side, the high-level academy activities must be processed from now on and immediately accounting for the situation with increasing the whole world GDP indicator specially those backward nations and regions that they need to adopt the local and advanced nations new one in order to raise their three industries from primary to tertiary one. We should look at the mediate side to act and make a strategic planning and allocation with tactic one, hence the more markets and purchase orders to realize the social modernization and civilization that may make us to live better preventing from the sanitation and healthy aspects.

On the other hand, the scholars are going to proceed their research activities taken into account what the frontier field in Physicș Medicine &Chemistry continuously searches so as to ascend the whole country basis science &technology largely. Many research item would be allocated from government National Natural Science Funds(NNSF), Provincial Fund for the sake of promoting national and provincial scientific projects that would provide more searchable items with capital for our scientist and professors to be doing. That one may be a national important research planning, hence the effectiveness power will occupy significance meanings anticipating to a certain progression with relevant theme and activity. Thereby, all of them with a combination team may process the relative work from experimental exploration on those magazine and academic report etc many aspects to composition alignment with wielding their actual capacity whether or not they can solve the key problems in defining one item. Many research achievement may publish in famous journals so as to get positive reputation and more projects sustainably from proceeding one route to several ones with evident performance to evaluate what degree the paper represents the actual problem. [1~26]

2. Discussions

The experts will accomplish their judgement in detailing GDP relevant value know how that affects our daily live for citizens like artificial intelligence payment robot that is completing the goods scanning and adding algorithm to be total price for customers to finish their face identification and presses the confirmation button, which is the entire course for one time dealing with. Those convenient payment machines are wielding their role in public occasion for us to share the immediately functional ones specially in occasions when there are many people to pay their capital. Maybe the robot price is somewhat high and often occurs mistake with fatigue chip one, hence the specialized people often go to working area to fix the machine making the cost highness for us to burden. Thereby, the simplified one just an identification-face i-pad with small size is using in city.

2.1 Spain &Chines provinces GDP analysis

The Spain &China provinces GDP analysis would provide 179 billion dollars~7.8 billion dollars by Spain~Guangdong province in 1984 accordingly in light of Figure 1 evidenced the Spain province forwards economy momentum. The y-o-y growth value might provide 4%~28% by them correspondingly to indicate the Guangdong province rapidest development pace.

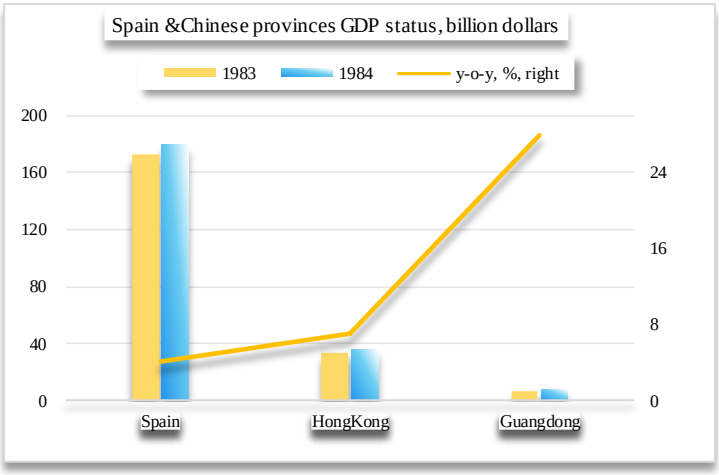

Figure 1 Spain &Chines provinces GDP analysis. [1]

2.2 Germany &Guangdong province GDP analysis

The Germany &Guangdong provinces GDP analysis might indicate 2.8 trillion dollars~0.3 trillion dollars by them in 2004 accordingly in light of Figure 2 evidenced the Germany forwards economy momentum. The y-o-y growth value might provide 3%~48% by them correspondingly to indicate the Guangdong province the rapidest development pace. There, the SY presented the Jiangsu &Guangdong two provinces with 46% speed.

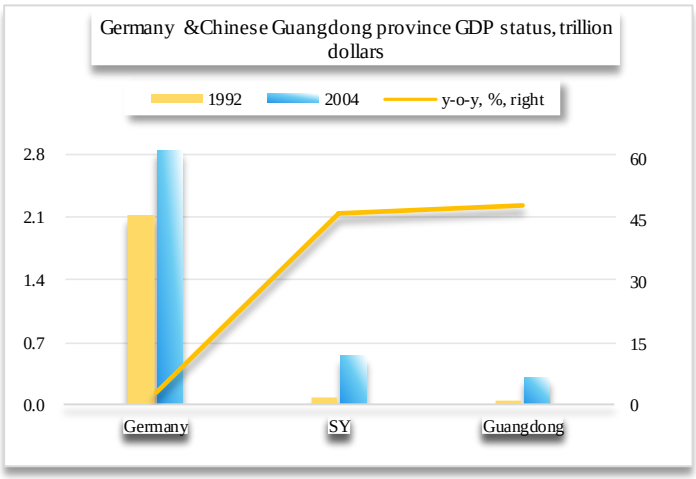

Figure 2 Germany &Guangdong province GDP. [2]

Moreover, the Spain, SY(Su &Yue) &China provinces GDP analysis 3.6 trillion dollars~1.2 trillion dollars by Germany~Guangdong province in 2016 accordingly in light of Figure 3 evidenced the former province forwards economy momentum. The y-o-y growth value might provide 3%~87% by them correspondingly to indicate the SY exceeding Zhejiang province rapidest development pace with 88%.

International Journal of Multidisciplinary Research and Bulletin
ISSN 3108-1428 (Online)

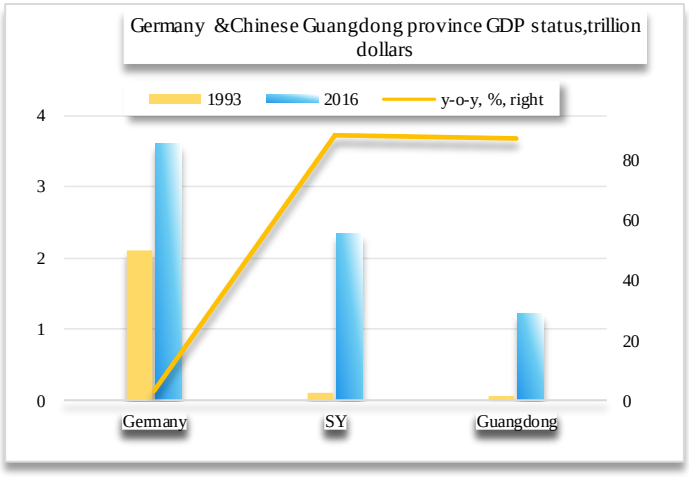

Figure 3 Germany &Guangdong province GDP. [2]

In the end, the Germany, SY &Guangdong province GDP analysis 3.8 trillion dollars~0.9 trillion dollars by Germany~Guangdong province in 2013 accordingly in light of Figure 4 evidenced the Germany forwards economy momentum. The y-o-y growth value might provide 5%~10% by them correspondingly to indicate the SY exceeding Guangdong province rapidest development pace with 10.8%.

3. Conclusions

In the financial stocks market the main focus will be on those proof-declination and having accumulative ones that was key-one indicator. If you have weak-power one you should regulate it so as to eliminate possible damage.Therefore, the strong stocks will provide the more security and certain-profits than those brisk and weak one where the portfolio combination investment become a good one due to its decreasing risk behaviors. So in the secondary industry the advantageously exerting the brand profile's vehicle business could become a trending for us to

participate to buy prevalent behavior. In the maker factory the updated new type brands might be welcome by our customer due to its having basis power supporting. When the vehicle has wrong to happen the timely fixing is to be processed for us to be convenient and cheap price. On the other side, if the serving time and miles attains the semi-failure degree the one may be bought with a certain price with discount for us to chase continuously. So that the automobile brand is to be fostered sustainably by senior engineers in factory for contributing to the high-creditable-evaluation commodity to be pushed constantly besides the high-quality-reputation by those famous factories. Thereby, those old and waiting for transforming customers would process their selling behavior and judgement to fix station and second-dealing store to get the corresponding service simply and conveniently. The encouraging the high-GDP-region will underscore their entities and prestige in the newest GDP ranking list from late three years to predicting next three ones known how they occupy the leading ones and why they got the good ones that will afford the why and how relationship among them for us to estimate their cause and planning. At the same time, the recruitment main power is flowing into the big city more and more due to its high-economic-level for those worker in architecture business and real estate one continually from rural area to center city. So that the corresponding policy must be planned and aligned in light of estimating their real live conditions and qualities for the sake of improving their later the immigrating resident tendency to be attractive welfare and bonus.

Article Publication Details
This article is published in the **International Journal of Multidisciplinary Research and Bulletin**, ISSN 3108-1428 (Online). In Volume 5 Issue 5 (Sep – Oct) 2026.
The journal is published and managed by **IRPG**.

Acknowledgements
We sincerely thank the editors and the reviewers for their valuable suggestions on this paper.

Funding
This paper was supported by Korean Science &Engineering Fund(KSEF) at the granted No 96-0300-11-01-03, under Specific Basis Research Program.

Data availability
No datasets were generated or analyzed during the current study.

Declarations
Ethics approval and consent to participate
The author(s) declare that it is not applicable.

Consent for publication
The author(s) declare that this is not applicable.

Competing interests
The author(s) declare that they have no competing interests.
