ABSTRACT

The secondary industry will present the main occupation to maintain and promote the whole GDP(gross domestic product) as an important support included the steel making mechanical construction & electrical and electronic device in a whole one that exhibits comprehensive combination and power for the sake of forming the stability strength &excellent capability. Therein, the higher performance it has the more security will be required where the NEV(new energy vehicle) can exhibit its excellent one due to adopting new electric and electronic parts to there that is to complete the reliability and security. So that one car price may ascend a lot of its originality whose role may be anticipating good one in driving it. There will be lots of complaint from customer side knew how to recall those wrong parts by manufacturers for guaranteeing their products security and credibility ultimately. There might be others from customer end those wrong and weak properties found by them so that the complaint was reported to the headquarter who brought up recall behavior for declining failure matters in driving time. Thereby, those complaints may form the new-views and innovation influence from manufacturer end probably some of which will be reconsidered and made a certain fixing from running motor which has a potential abnormal error caused by intrinsic relationship by them. So that the correct inspection can be proceeded whose effectiveness will continue to descend the error factor within driving time. Therefore, the zero-

error-vehicle needs to be considered again and prudently for the sake of decreasing those resulted dis-function problems. The manufacturer mission is not only making a motor simply but also ensuring the AS(after sale) service and recall action to be prepared in random time. For convenience the making quality inspection by quality department would be controlled no matter what the automatic-flow-line is used from materials inspection to assembly action and experimental crashing trial. Eventually, the diversification market needs the multi-functional vehicle to be manufactured to meet customer request currently and in future known how to design those diversified vehicle satisfying our day after day suitable requests. At the low cost condition the preparation function may maintain a while for us to design more sophisticated one for using in future that may affect the next generation views at all.

1. INTRODUCTION

The more endeavor and studies we put the more achievement can be acquired by our engineering and scientists from the theoretical principle to the experimental course and result where the much study needs to be explored sustainably with more deepening and higher-level. Therefore, the theory and experiment coincides will be gained by us through a special measures even interdisciplinary subjects one knowing how the intrinsically happening cause and result definitely. On the other hand, the transformation from the sample to mature complete product will become an efficiently knowledge transacting course from laboratory to research &development department in manufacturer side together with cooperation measure. The final destination can provide the more widening study direction for our scientist and scholars to continuously search for long time until a certain source might be eliminating because the sustainable development and cultivation may consumer more nature resource. So that the maintaining somewhat resource will become an important conservation behavior like petroleum reservation can remain some degree for usefulness probably in future prevented from accidental happening.

The study research can be regarded the same tendency that we should largely developed energy source from carbon one so that the carbide will contaminate our earth atmosphere severely even drifting into Korean and Japan that may play an evil influence on the neighboring air and environment. Therein, much labor will be proceeded in advance to descent those dust and carbon powder to drift randomly through our engineers and government effort commonly. On the other

side, the scientist still write their theoretical research paper prevented from the most necessary matters if possible and most currently demanded ones. Thereby the more research papers would publish in high-citation journal to arouse the sleepy states nature and science from basis one to applied side together dedicated to the society smoothness' proceeding and improved the human being to live conveniently and comfortably sustainably. [1~9]

2. Discussions

With regard to considering the published paper the senior engineer &scientists will represent one part scientific achievement to exhibit one technique maturity with more convenience and low cost for the sake of improving its easy producing characteristics. Through those papers with published tip-magazine the referent content may be estimated carefully and as a database it is reserved in Elevier and Springer for exerting its outstanding performance in substantial limitation behavior like super-conduction in low temperature for our research &professors to search sustainably.

2.1 Hubei &Fujian provinces cities' GDP analysis

The Hubei &Fujian provinces cities' GDP analysis might show 253 billion yuan~66.6 billion yuan by Wuhan~Yichang citiy accordingly evidenced the former strong economic entity in 2005 in terms of Figure 1. The y-o-y growth value would exhibit 21%~11% by them correspondingly illustrated the Wuhan beyond Xiamen one with 17% the highest developed pace.

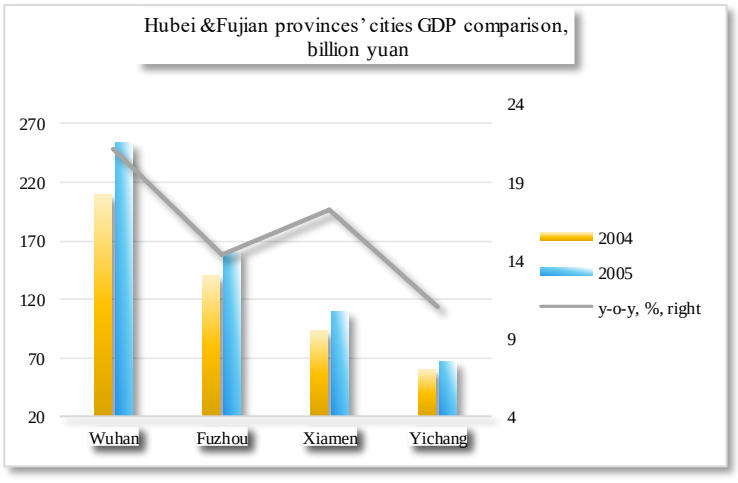

Figure 1 Hubei &Fujian provinces cities' GDP analysis. [1]

The Hubei &Fujian provinces cities' GDP analysis might show 70 billion yuan~39 billion yuan by Zhangzhou~Huanggang citiy accordingly evidenced the former strong economic entity in 2005 in terms of Figure 2. The y-o-y growth value would exhibit 18%~14% by them

correspondingly illustrated the Wuhan following Longyan one with 19% the highest developed pace.

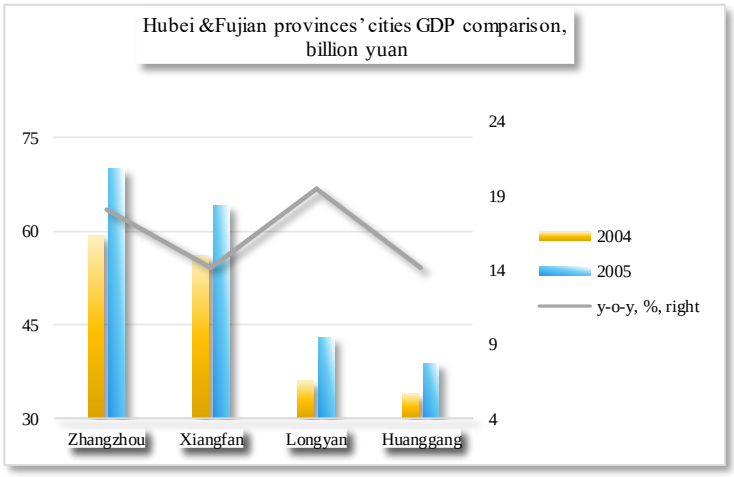

Figure 2 Hubei &Fujian provinces cities' GDP analysis I. [1]

The Hubei &Fujian provinces cities' GDP analysis might show 31 billion yuan~25 billion yuan by Zhangzhou~Huanggang citiy accordingly evidenced the former strong economic entity in 1998 in terms of Figure 3. The y-o-y growth value would exhibit 44%~35% by them correspondingly illustrated the Zhangzhou the highest developed pace. In contrast, the Longyan city remained the relatively lowest one with 27%.

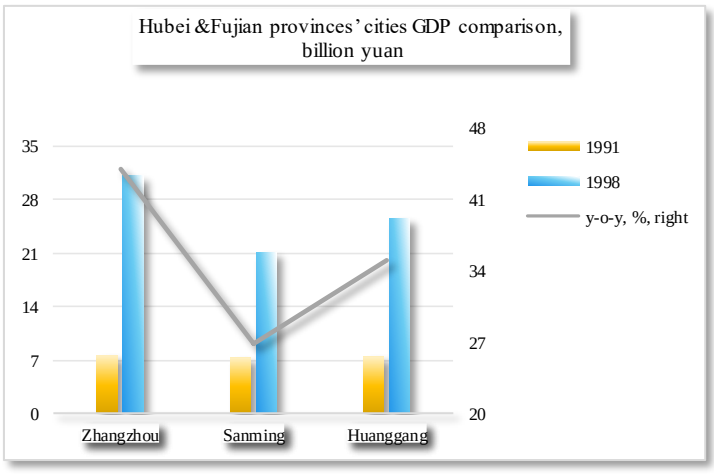

Figure 3 Hubei &Fujian provinces cities' GDP analysis II. [1]

2.2 The Stocks price vibrations

The Stocks price vibrations recently might indicate -1.5%~-1.1% by <Aifu Te>~<Weide Information> accordingly in light of Table 1 to evidence the <Lude Tech> &<Xianhui Tech> highest increasing rate with increasing rate 12.5% &2.9% respectively.

Table 1 The Stocks price vibrations recently. [2]

Name	Price, yuan	Increasing rate, %	Name	Price, yuan	Increasing rate, %
Aifu Te	14	-1.5	Juyi Tech	24	-0.8
Borui Medicine	32	-2.7	Gaoling Information	31	0.26
Xidi Wei	31	-2.7	Xianhui Tech	58	2.9
Lude Tech	25	12.5	Weide Information	39	-1.1

2.3 Chinese NEV &Vehicle sale amount

The Chinese NEV(new energy vehicle) &Vehicle sale amount would attain 12.4 million &8.2 million correspondingly in January~September 2026 manifested the NEV stronger sale number beyond exportation ones according to Figure 4. On the other side, their achievement in September 2026 might indicate 1.8 million &1.05 million ones by them accordingly evidenced the former NEV higher sale one than exportation amount. In contrast, the y-o-y growth value might exhibit 13.6% &61% by them in September 2026 respectively to illustrate the latter exportation higher growing pace while it indicated 11% &66% by them in January~September 2026 evidenced the latter higher speed as well.

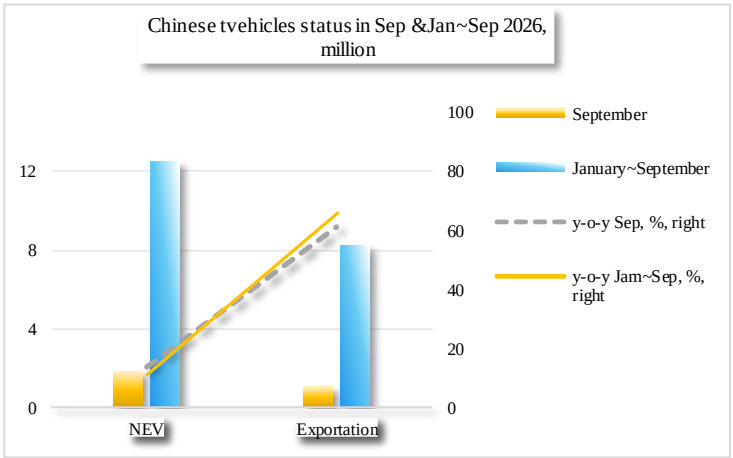

Figure 4 The Chinese NEV &Vehicle sale amount. [3]

3. Conclusions

The auto as an important secondary industry has an exceptional role in one province and country so that it is to be underscored one in national GDP value where the more amount and quality needs to be granted. There would be so many ones made by Chinese main manufacturer specially in NEV(new energy vehicle) that is now very prevalent in society market included the domestic one and abroad one. So that the abroad market requirement is to enhance year after year that means there is more orders by them to be given us to produce those electric ones sustainably.

Following that international demands from various nations the new brands are to be urgently demanding and ascend its number from different models to different miles continuously. That the more many auto sells to abroad country means there may be more necessary provision from various provinces and cities makers frequently. Thereby, our steel industrial system can be endured a heavy experience whether it can tolerate the more and more launch quantity year by year. At the same time, the excellent performance can endure to what time so the sustainable research and those steel materials can maintain what degree. Probably after ten years whether the advantageously technical reservation can change Chinese auto into the world auto market subsequently for us to bear and make an endeavour breaking through the international brands.

Article Publication Details
This article is published in the **International Journal of Multidisciplinary Research and Bulletin**, ISSN 3108-1428 (Online). In Volume 5 Issue 5 (Sep – Oct) 2026.
The journal is published and managed by **IRPG**.

Acknowledgements
We sincerely thank the editors and the reviewers for their valuable suggestions on this paper.

Funding
This paper was supported by Korean Scientist &Engineering Fund(KSEF) at granted No. 96-0300-11-01-03 under specific Basis Research Program.

Data availability
No datasets were generated or analyzed during the current study.
