ABSTRACT

The scientists can exert their effectiveness in developing GDP (gross domestic product) value with their wisdom in the direction of solving the difficult problems that they probably meet in their research course and other inspirations. From basis one to applied research both of them need to be dealt with carefully and prudently due to their meanings in helping people make a progression in one and several direction to apply their achievements to detailing places like super-conduction in high temperature that they may resolve the ultimately difficult ones from low temperature to high one. Therefore, the door into those deepening fields may become a feasibility thing for us to study and search for continuously in order to extend those derivations from original principles like multi-disciplinary subject eg. Electrics and electronics &mechanics besides innovation materials. Through combining those fields with different subjects the certain performance can be forming for solving those fringe &edge phenomena to take up new power from the theoretic one to evidence. If the achievement can be found in the course of research they may write their published paper with those theoretic proof substances for the sake of acquiring more achievements from their initiative one to derivative one. Whether that performance would adapt to the actuality some degree the latter researchers may provide their states in paper so as to find practical application and more derivative ones. Maybe there would be many years to maintain with those techniques due to strictly proven time and more ones to afford the correctness as for the later ones effortful activities. Thereby, the certain high-technique product is made by manufacturer and upgrade within periodic time like once every year and month to maintain its weakness and some defaults in the logical program and tolerating force like fatigue life happening easily in usefulness for customers. There might be requirement from

originated automatic-flow-line to assembly procedures under monitoring by quality department whose role becomes urgent and necessary in inspecting quality-side to make the new products more qualifying for customer-end.

1. INTRODUCTION

The electrical generation would reflect the one region and country industry development level who plays an important role, so the multi-types electrical generating method like photovoltaic energy, wind turbine one and nuclear power plant. Thereby, we should consider the cost and efficiency relationship to make the advantage items to utilize in exploiting the green source which may bring out the innovation energy industry change in future. Meanwhile, the Robot and computer & AI (artificial intelligence) GPU can be applied to the newest robot and computer field to complete very sophisticated and humanoid structure which had realized the cutting-edge-field promotion continuously. In contrast, the journal will publish new papers on it online and offline to be convenient to us with Internet, so more reader can look at those papers which is a deep field to handle the defining destination in detail with experiment and model. Thereby, the relevant will identify the key content rapidly and judge its feasibility in making procedure with equipment after they discuss with the author for them to provide more detailing substantial proof. That is about to the industry, learn &research three factors in the transforming them into industry product, still there are many endeavors for us to judge the commercialization possibly like the materials cost, machine needs to be purchased, quality, its stability &efficiency. But there is still rapid procedure like purchasing the technique from the consult agency and supplier for the sake of quickness completion the former several stages to occupy the advantage power. So that the more scientist and experts would be necessary by now because they may promote our economy development level towards the developed countries which has a deep meaning. On the other side, the economy GDP (gross domestic product) y-y has an important value in statistics and economics in light of processing one nation general amount for hurrying to chase the former as early as possible. We should carry out the predict value by experts and government institution step by step for the sake of conquering the nations barrier. Then we have much rights to earn to export other countries and regions because we have enough space to encourage the export and import foreign trade to make us to play No. One economy community on the whole. Let's fight and win the play. [1~8]

2. Discussions

The GDP as an indicator may play an important role in every aspects of nation and region economic activities, so that the emphasis on it will become a necessary factor for us to evaluate continually. For example the expenditure and incoming balance which may influence the national economic activities like visiting various regions in a country would afford a higher expense booming including the restaurant eating style & buying souvenir etc. many aspects besides the double-flight-fee. Therefore, the more income will be necessary accounting for high-technique working occupation that may bring us up the enough income for us to prepare to enjoy a travel happiness. On the other hand, the industrial producing amount will enhance the working opportunities with increasing high-technique graduates and talents in others employment rate a certain degree that may raise that GDP value definitely.

2.1 Vietnam &Chines new first-tier cities GDP analysis

The Chines new first-tier cities GDP analysis might offer 55 billion dollars &53 billion dollars by Qingdao~Ningbo city accordingly in 2007 in light of Figure 1 evidenced the former strong economic momentum. The y-o-y growth value would afford 57% ~66% by them correspondingly to manifest the latter Qingdao city higher developed pace.

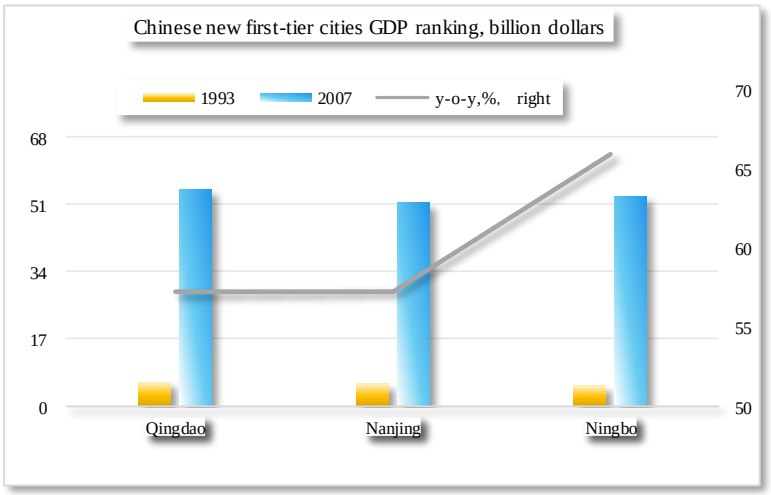

Figure 1 The Chines new first-tier cities GDP analysis. [1]

Furthermore, the Chines new first-tier cities GDP analysis might offer 1.6 billion dollars &5.3 billion dollars by Foshan~Ningbo city accordingly in 1989 in light of Figure 2 evidenced the latter strong economic momentum. The y-o-y growth value would afford 10% ~0.25% by them correspondingly to manifest the former Foshan city higher developed pace. In contrast, the Zhengzhou city retained the highest developed pace with 48%.

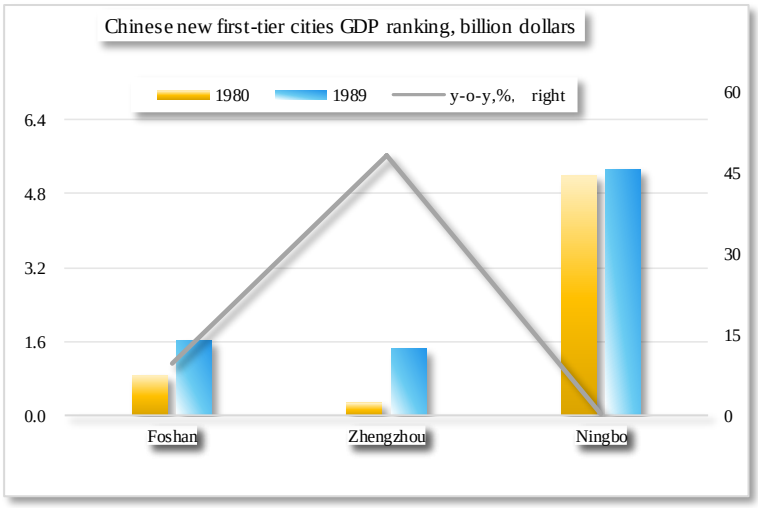

Figure 2 The Chines new first-tier cities GDP analysis I. [1]

At the last, the Chines new first-tier cities GDP analysis might offer 2.4 billion dollars &4 billion dollars by Chengdu~Tianjin city accordingly in 1989 in light of Figure 3 evidenced the latter strong economic momentum. The y-o-y growth value would afford 23% ~19% by them correspondingly to manifest the Chengdu city highest developed pace.

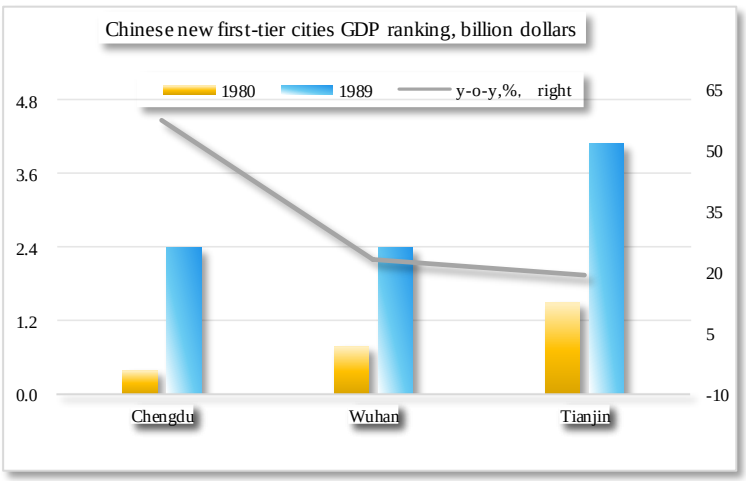

Figure 3 The Chines new first-tier cities GDP analysis II. [1]

2.2 Mumbai city &Chinese capitals GDP analysis

The Mumbai city &Chinese capitals GDP analysis might offer 161 billion yuan &23 billion yuan by Mumbai city &Wuhan one accordingly in 1991 in light of Figure 4 to illustrate the former higher economic trajectory. The y-o-y growth value would afford 19% &18% by them correspondingly manifested the Chengdu city highest developed pace while the Guangzhou city retained the second speed with 25.5% pace then.

3. Conclusions

The auto as an important secondary industry has an exceptional role in one province and country so that it is to be underscored one in national GDP value where the more amount and quality needs to be granted. There would be so many ones made by Chinese main manufacturer specially in NEV(new energy vehicle) that is now very prevalent in society market included the domestic one and abroad one. So that the abroad market requirement is to enhance year after year that means there is more orders by them to be given us to produce those electric ones sustainably. Following that international demands from various nations the new brands are to be urgently demanding and ascend its number from different models to different miles continuously. That the more many auto sells to abroad country means there may be more necessary provision from various provinces and cities makers frequently. Thereby, our steel industrial system can be endured a heavy experience whether it can tolerate the more and more launch quantity year by year. At the same time, the excellent performance can endure to what time so the sustainable research and those steel materials can maintain what degree. Probably after ten years whether the advantageously technical reservation can change Chinese auto into the world auto market subsequently for us to bear and make an endeavour breaking through the international brands. Meanwhile, the top subjects in universities need to be developed largely for the sake of processing high-end-field technique and skill dedicated to the society modernization and intelligentization whose mission is to enhance hugely the peoples live level and quality &convenience etc..So that the corresponding military defence capacity optimization and precise hit capacity etc. aspects is needed to continue exerting its searching and progression task eventually.

Article Publication Details
This article is published in the **International Journal of Multidisciplinary Research and Bulletin**, ISSN 3108-1428 (Online). In Volume 5 Issue 5 (Sep – Oct) 2026.
The journal is published and managed by **IRPG**.

Acknowledgements
We sincerely thank the editors and the reviewers for their valuable suggestions on this paper.

Funding
The authors declare that no funding was received for this work.

Data availability
No datasets were generated or analyzed during the current study.

Declarations

Ethics approval and consent to participate
The author(s) declare that it is not applicable.

Consent for publication
The author(s) declare that this is not applicable.

Competing interests
The author(s) declare that they have no competing interests.
